Domain-Specific Program Generation Christian Lengauer,Don Batory,Charles Consel,Martin Odersky,2004-05-24 Program generation holds the promise of helping to bridge the gap between application-level problem solutions and efficient implementations at the level of today's source programs as written in C or Java. Thus, program generation can substantially contribute to reducing production cost and time-to-market in future software production, while improving the quality and stability of the product. This book is about domain-specific program generation; it is the outcome of a Dagstuhl seminar on the topic held in March 2003. After an introductory preface by the volume editors, the 18 carefully reviewed revised full papers presented are organized into topical sections on - surveys of domain-specific programming technologies - domain-specific programming languages - tool support for program generation - domain-specific techniques for program optimization

A Board Game Education Jeffrey P. Hinebaugh,2009-07-16 A Board Game Education is an entertaining and valuable resource for parents, teachers, educators, and anyone who appreciates the fun and entertainment provided by classic, traditional board games. The book provides an informative analysis of how classic board games that everyone has played_and probably owns_are not only great family entertainment but also develop core educational skills that have been proven to lead to academic achievement. Through A Board Game Education readers learn a bit of the fascinating history trivia and little-known facts regarding the most loved board games of all time (i.e., how Monopoly was used by WWII POWs to escape). At the same time, Hinebaugh identifies the distinct educational skills developed by each of these games and explores in detail how the play of these games cultivates such skills. A Board Game Education also provides valuable suggestions about how to modify and vary these classic board games to specifically enhance additional core educational skills and concepts. Who would have thought that Candy Land could be modified into a strategy game and Chutes and Ladders could be used to teach algebraic equations and advanced math.

Rewriting Logic and Its Applications Peter Csaba Ölveczky,2010-10-06 This volume contains the proceedings of the Eighth International Workshop on Rewriting Logic and its Applications (WRLA 2010) that was held in Paphos, Cyprus, March 20–21, 2010, as a satellite workshop of the European Joint C- ferences on Theory and Practice of Software (ETAPS 2010). Rewriting logic is a natural semantic framework for representing conc- rency,parallelism,communicationandinteraction,aswellasbeing anexpressive (meta)logical framework for representing logics. It can then be used for spe- fying a wide range of systems and programming languages in various appli- tion ?elds. In recent years, several executable speci?cation languages based on rewriting logic (ASF+SDF, CafeOBJ, ELAN, Maude) have been designed and implemented. The aim of the WRLA workshop series is to bring together - searchers with a common interest in rewriting logic and its applications, and to give them the opportunity to present their recent works, discuss future research directions, and exchange ideas. Previous WRLA workshops were held in Asilomar (1996), Pont-a-Mousson ` (1998), Kanazawa (2000), Pisa (2002), Barcelona (2004), Vienna (2006), and Budapest (2008), and their proceedings have been published inElectronic Notes in Theoretical Computer Science. In addition, selected papers from WRLA 1996 have been published in a special issue of Theoretical Computer Science,and selected papers from WRLA 2004 appeared in a special issue of Higher-Order and Symbolic Computation.

Encyclopedia of Play in Today's Society Rodney P. Carlisle, 2009-04-02 Selected as an Outstanding Academic Title by Choice Magazine, January 2010 The Encyclopedia of Play: A Social History explores the concept of play in history and modern society in the United States and internationally. Its scope encompasses leisure and recreation activities of children as well as adults throughout the ages, from dice games in the Roman empire to video games today. As an academic social history, it includes the perspectives of several curricular disciplines, from sociology to child psychology, from lifestyle history to social epidemiology. This two-volume set will serve as a general, non-technical resource for students in education and human development, health and sports psychology, leisure and recreation studies and kinesiology, history, and other social sciences to understand the importance of play as it has developed globally throughout history and to appreciate the affects of play on child and adult development, particularly on health, creativity, and imagination.

Code Generation with Templates Jeroen Arnoldus, Mark van den Brand, A. Serebrenik, J.J. Brunekreef, 2012-05-22 Templates are used to generate all kinds of text, including computer code. The last decade, the use of templates gained a lot of popularity due to the increase of dynamic web applications. Templates are a tool for programmers, and implementations of template engines are most times based on practical experience rather than based on a theoretical background. This book reveals the mathematical background of templates and shows interesting findings for improving the practical use of templates. First, a framework to determine the necessary computational power for the template metalanguage is presented. The template metalanguage does not need to be Turing-complete to be useful. A non-Turing-complete metalanguage enforces separation of concerns between the view and model. Second, syntactical correctness of all languages of the templates and generated code is ensured. This includes the syntactical correctness of the template metalanguage and the output language. Third, case studies show that the achieved goals are applicable in practice. It is even shown that syntactical correctness helps to prevent cross-site scripting attacks in web applications. The target audience of this book is twofold. The first group exists of researcher interested in the mathematical background of templates. The second group exists of users of templates. This includes designers of template engines on one side and programmers and web designers using templates on the other side
