Pediatric Food Preferences and Eating Behaviors Julie C. Lumeng,Jennifer O. Fisher,2018-07-04 *Pediatric Food Preferences and Eating Behaviors* reviews scientific works that investigate why children eat the way they do and whether eating behaviors are modifiable. The book begins with an introduction and historical perspective, and then delves into the development of flavor preferences, the role of repeated exposure and other types of learning, the effects of modeling eating behavior, picky eating, food neophobia, and food selectivity. Other sections discuss appetite regulation, the role of reward pathways, genetic contributions to eating behaviors, environmental influences, cognitive aspects, the development of loss of control eating, and food cognitions and nutrition knowledge. Written by leading researchers in the field, each chapter presents basic concepts and definitions, methodological issues pertaining to measurement, and the current state of scientific knowledge as well as directions for future research. Delivers an up-to-date synthesis of the research evidence addressing the development of children's eating behaviors, from birth to age 18 years Provides an in-depth synthesis of the basic eating behaviors that contribute to consumption patterns Translates the complex and sometimes conflicting research in this area to clinical and public health practice Concludes each chapter with practical implications for practice Presents the limits of current knowledge and the next steps in scientific inquiry

Personalized Nutrition George Moschonis,Katherine Livingstone,Jessica Biesiekierski,2019-08-26 "Personalised Nutrition" represents any initiative that attempts to provide tailor-made healthy eating advice based on the nutritional needs of each individual, as these are dictated by the individual's behaviour, phenotype and/or genotype, and their interactions. This Special Issue of *Nutrients* is dedicated to the development, implementation and assessment of the effectiveness of evidence-based "Personalised Nutrition" strategies. In this regard, a selection of reviews and original research manuscripts will bring together the latest evidence on how lifestyle habits, physiology, nutraceuticals, gut microbiome and genetics can be integrated into nutritional solutions, specific to the needs of each individual, for maintaining health and preventing diseases.

Flavoromics Leo M. L. Nollet,Matteo Bordiga,2023-12-18 Forty years of progress in the fields of gas chromatography and data collection have culminated in flavoromics. This is a combination of chemometrics and metabolomics. Essentially, it is the non-targeted way of rapidly collecting a significant amount of data from a wide range of sample populations and using the data to study complicated topics. Now that we have the required tools, we can carry out high-throughput trace investigations that incorporate both gustatory and olfactory signals. *Flavoromics: An Integrated Approach to Flavor and Sensory Assessment* describes the tools to do high-throughput, trace analyses that represent both taste and olfaction stimuli. It explains how today's single sample research will generate thousands of data points, which are loaded into sophisticated statistical analysis algorithms to establish what stimuli are responsible for flavor. This cutting-edge equipment will enable us to create flavorings and perfumes that are more realistic and superior. Key Features: Includes a detailed section on data handling/mining Section 4 describes a broad overview of different food matrices Points out the integration of flavoromics with advanced separation methods, data management, statistical modeling, and variable selection This book represents a revolutionary tool waiting to help make better, truer to life flavorings and fragrances.
