**Understanding and Controlling Strobe Lighting** John Siskin, 2010-11 John Siskin lays out a simple process for designing effective strobe-lighting setups for portraits, architecture, still-life images and more. According to Siskin, the most important skill is pre-visualisation. After exploring the quality, quantity, value, versatility and ease of use of many modifiers and sources, including less-traditional laptop screens, flashlights and slide projectors, Siskin moves on to using the correct exposure and camera settings.

*"Strobe," the Lively Light* Howard Lee Luray, 1954

*Crafting the Natural Light Look* Sandra Coan, 2020-01-31

**Learn to use a one-light approach for recreating the look of beautiful, natural window light for portraiture!**

At its best, natural light is magical for portraiture. The quality of natural light streaming through a window can be extraordinary—gorgeous, wrapping light that flatters your subject and can be used to create multiple looks. For years, photographer Sandra Coan exclusively used natural light in her portraiture work. And while the results could be magnificent, she also learned that she could not rely on it to build a business and create consistently great photographs. That's because natural light is frustratingly unpredictable: sometimes it rains, sometimes the light is too harsh when your clients are available, and sometimes—depending on the time of year—it's just too dark.

In order to grow her business with dependably great results and a high level of professionalism, Sandra finally decided to tackle artificial light. She spent years honing her ability to use artificial light to recreate the look of beautiful, natural light. And now, with a simple one-light approach, she produces "natural" light whenever and wherever she likes, creating great portraits in any situation, at any time of day or night. It's an approach that has led to a successful career spanning two decades and a signature look to her work. Here, in *Crafting the Natural Light Look*, Sandra shares her knowledge and techniques so that you, too, can learn to quickly and dependably create the look of natural light in your own portraiture. Unlike other books that address artificial light, Sandra's tone is conversational and easygoing, and she does not cover everything there is to know about artificial light. In fact, there are no two- or three-light setups here. Instead, Sandra's method is straightforward and easily actionable. She covers:

- The key characteristics of light (intensity, distance, direction)
- Equipment: strobes, flashes, light meters, triggers, receivers, modifiers, reflectors, and light stands—including what she uses, and what she recommends if starting out on a budget
- Shutter speed and its relationship with artificial light
- Where to position the light and the subject for consistent, flattering results
- Creating four lighting patterns and looks with one setup—flat light, loop light, side light, and backlight
- Using a light meter to determine the perfect flash power (whether you shoot film or digital)
- Working with individuals, families, and groups
- The role of shadows in its contribution to the drama and mood of a portrait
- Common mistakes and how to avoid them
- What she does in post-production (very little!)

Finally, in a series of case studies, she brings it all together and shares her thought process as she works through a number of real-world portrait shoots from start to finish. If you're a "natural light photographer" who's been either struggling with flash or reluctant to learn it at all, *Crafting the Natural Light Look* is exactly the book you need to improve the quality and consistency of your portraiture.

*ABCs of Beautiful Light* Rosanne Olson, 2014-08-12 Everything we see is lit by one source or another. The questions are: what and how? That is what this book is designed to teach you. Through Rosanne Olson's tried-and-true course on lighting principles for photography, video, and art in general, you will discover how the angles and heights of your light sources affect your pictures. You will learn how to work with light modifiers to change the quality of your light, and how to control light to create a feeling of depth and dimension—whether you're shooting with natural light, continuous artificial light, studio strobes, dedicated flash, or a combination of sources. Assignments are included to help you put each concept into practice as you perfect your skills and train your eyes to see the subtleties of light. You will never look at a photograph or painting in the same way after you read this book!

*Arduino Project Handbook* Mark Geddes, 2016-06-01 Arduino Project Handbook is a beginner-

friendly collection of electronics projects using the low-cost Arduino board. With just a handful of components, an Arduino, and a computer, you'll learn to build and program everything from light shows to arcade games to an ultrasonic security system. First you'll get set up with an introduction to the Arduino and valuable advice on tools and components. Then you can work through the book in order or just jump to projects that catch your eye. Each project includes simple instructions, colorful photos and circuit diagrams, and all necessary code. Arduino Project Handbook is a fast and fun way to get started with microcontrollers that's perfect for beginners, hobbyists, parents, and educators. Uses the Arduino Uno board.

**Exposure of Men to Intermittent Photic Stimulation Under Simulated IFR Conditions**, 1966 Ten men were subjected to intermittent photic stimulation in an airplane cockpit in an environmental chamber by (1) a Grimes red rotating beacon (1.5 FPS), (2) an Air Guard strobe light (1.0 FPS) and (3) propeller flicker (10 FPS). IFR conditions were simulated by passing steam into the cooled chamber. Electroencephalograms and electrooculograms were recorded for the 10 minute period prior to photic stimulation, during 10 minutes of photic stimulation, and for 10 minutes after stimulation. None of the lights provoked seizure, syncope, nystagmus or photic driving. The strobe light evoked complaints of irritation from 7 of the subjects and caused pacing of the alpha rhythm together with pulsating pupils. Three subjects became drowsy during the Grimes light, six became drowsy during propeller flicker, none complained of drowsiness during the strobe light. These sources of intermittent light appear to be innocuous to normal people. The commonest complaint was annoyance. Drowsiness was probably due to the environment and nature of the task.
