Ischaemic Stroke in the Young Turgut Tatlisumak,Lars Thomassen,2018 The incidence of stroke in younger adults is rising, with approximately 5% of all ischaemic strokes occurring in individuals younger than 45 years and 10% occurring in those under 50. Causes and risk factor profiles among young ischaemic stroke patients differ significantly from those in elderly patients, and young patients frequently have genetic or other rare causes which require different diagnostic work-up and treatment strategies from older stroke patients. While the aetiology, diagnosis, and treatment of stroke are commonly covered elsewhere, there is little literature referring specifically to the treatment needs for younger stroke patients. Ischaemic Stroke in the Young brings together the latest research from leading stroke teams, and takes a detailed diagnostic approach to explore the issues particular to younger stroke victims. This problem-based approach complements existing stroke volumes, providing physicians and stroke service staff with the specific diagnostic and treatment information they need when dealing with younger stroke patients.

Oxford Case Histories in TIA and Stroke Sarah T. Pendlebury,Ursula G. Schulz,Aneil Malhotra,Peter M. Rothwell,2012-01-26 Based around the core curriculum for specialist trainees, Oxford Case Histories in TIA and Stroke features 51 well-structured, peer-reviewed cases from the Oxford Hospitals giving detailed coverage of the specialty, including diagnostic and management dilemmas. Each case comprises a brief clinical history and the relevant examination findings; details of investigations undertaken, followed by questions on differential diagnosis and management; and detailed answers and discussion. The question-and-answer format is designed to enhance the reader's diagnostic ability and clinical understanding. As part of the Oxford Case Histories series, this book is aimed at post-membership trainees and consultants and will be a useful resource for those preparing for exit examinations or revalidation. It will also be of interest to those who wish to improve their skills in diagnosis and management of a broad range of stroke disorders.

Risk Factors for Cerebrovascular Disease and Stroke Sudha Seshadri,St?phanie Debette,2016-03-07 Risk Factors for Cerebrovascular Disease and Stroke address the relationship of a wide variety of vascular risk factors in the spectrum of cerebrovascular diseases. An international group of professionals the forefront of research and education, provide their expertise about environmental and genetic determinants for cerebrovascular disease and stroke. The authors aim to provide information on developments of genetic, environmental and lifestyle-related risk factors of various subtypes of stroke, and MRI-markers of cerebrovascular disease. One in two men, and one in three women after the age of 40, will develop a stroke in their lifetime. The burden of cerebrovascular disease extends far beyond that of acute clinical events such as stroke, with covert vascular injury on brain MRI being highly prevalent in older community-dwelling persons. Therefore, improving our understanding of the risk factors for stroke and cerebrovascular disease is of paramount importance for improving prevention strategies. Secular trends in stroke epidemiology, risk factors, and intermediate markers (including carotid ultrasound, brain MRI and circulating biomarkers) are presented. Cutting edge information on genetic, environmental and lifestyle-related risk factors of various subtypes of stroke and MRI-markers of cerebrovascular diseases are displayed. This important book is an essential reference to physicians interested in more effective primary prevention of stroke.
