The Urban Climatic Map Edward Ng,Chao

Ren,2015-09-07 Rapid urbanization, higher density and more compact cities have brought about a new science of urban climatology. An understanding of the mapping of this phenomenon is crucial for urban planners. The book brings together experts in the field of Urban Climatic Mapping to provide

the state of the art understanding on how urban climatic knowledge can be made available and utilized by urban planners. The book contains the technology, methodology, and various focuses and approaches of urban climatic map making. It illustrates this understanding with examples and case studies from around the world, and it explains how urban climatic information can be analysed, interpreted and applied in urban planning. The book attempts to bridge the gap between the science of urban climatology and the practice of urban planning. It provides a useful one-stop reference for postgraduates, academics and urban climatologists wishing to better understand the needs for urban climatic knowledge in city planning; and urban planners and policy makers interested in applying the knowledge to design future sustainable cities and quality urban spaces.

Urban Climate Science for Planning Healthy Cities Chao Ren, Glenn McGregor, 2022-01-01 This volume demonstrates how urban climate science can provide valuable information for planning healthy cities. The book illustrates the idea of Science in Time, Science in Place by providing worldwide case-based urban climatic planning applications for a variety of regions and countries, utilizing relevant climatic-spatial planning experiences to address local climatic and environmental health issues. Comprised of three major sections entitled The Rise of Mega-cities and the Concept of Climate Resilience and Healthy Living, Urban Climate Science in Action, and Future Challenges and the Way Forward, the book argues for the recognition

of climate as a key element of healthy cities. Topics covered include: urban resilience in a climate context, climate responsive planning and urban climate interventions to achieve healthy cities, climate extremes, public health impact, urban climate-related health risk information, urban design and planning, and governance and management of sustainable urban development. The book will appeal to an international audience of practicing planners and designers, public health and built environment professionals, social scientists, researchers in epidemiology, climatology and biometeorology, and international to city scale policy makers. Chapter "Manchester: The Role of Urban Domestic Gardens in Climate Adaptation and Resilience" is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.
