The Mobile-First SEO Sumit Dewanjee,2020-07-14 In the year 2015, Google declared an important update, which the author didn't take seriously as that was related to the mobile version of the website, where most of his clients' websites were having maximum visitors from a desktop. In the year 2016, Google announced that they would be strengthening their mobile-friendly ranking signal and yes many websites got affected by this update as they are not mobile-friendly. On 5th March 2020, Google has officially announced mobile-first indexing for the whole web in the Google Webmaster Central Blog and after the latest algorithm change from Google, named Mobilegeddon, Mobile SEO has become an integral part of Digital Marketing & spreading brand awareness. Almost 70% of the global reader base uses their smartphones to visit a website. Search Engine Optimization is a broad niche for all budding digital marketers, and Mobile SEO is a crucial part of it. In this Digital Marketing book, the author has tried to share all the important technical Mobile SEO Factors, which will help one to get rank on Mobile Search Engine Result Page.

Proceedings of the Future Technologies Conference (FTC) 2021, Volume 1 Kohei Arai,2021-10-23 This book covers a wide range of important topics including but not limited to Technology Trends, Computing, Artificial Intelligence, Machine Vision, Communication, Security, e-Learning, and Ambient Intelligence and their applications to the real world. The sixth Future Technologies Conference 2021 was organized virtually and received a total of 531 submissions from academic pioneering researchers, scientists, industrial engineers, and students from all over the world.. After a double-blind peer review process, 191 submissions have been selected to be included in these proceedings. One of the meaningful and valuable dimensions of this conference is the way it brings together a large group of technology geniuses in one venue to not only present breakthrough research in future technologies, but also to promote discussions and debate of relevant issues, challenges, opportunities and research findings. We hope that readers find the book interesting, exciting, and inspiring; it provides the state-of-the-art intelligent methods and techniques for solving real-world problems along with a vision of the future research.

Audience Jeffrey K. Rohrs,2013-11-11 Proprietary audience development is now a core marketing responsibility. Every company needs audiences to survive. They are where you find new customers and develop more profitable relationships. And yet, most companies today treat their email, mobile, and social media audiences like afterthoughts instead of the corporate assets they are. With AUDIENCE, Jeff Rohrs seeks to change this dynamic

through adoption of The Audience Imperative. This powerful mandate challenges all companies to use their paid, owned, and earned media to not only sell in the short-term but also increase the size, engagement, and value of their proprietary audiences over the long-term. As content marketing professionals have discovered, the days of “build it and they will come” are long gone. If you’re looking for a way to gain a lasting advantage over your competition, look no further and start building your email, Facebook, Google, Instagram, mobile app, SMS, Twitter, website, and YouTube audiences to last.

Entity-Oriented Search Krisztian Balog,2018-10-02 This open access book covers all facets of entity-oriented search—where “search” can be interpreted in the broadest sense of information access—from a unified point of view, and provides a coherent and comprehensive overview of the state of the art. It represents the first synthesis of research in this broad and rapidly developing area. Selected topics are discussed in-depth, the goal being to establish fundamental techniques and methods as a basis for future research and development. Additional topics are treated at a survey level only, containing numerous pointers to the relevant literature. A roadmap for future research, based on open issues and challenges identified along the way, rounds out the book. The book is divided into three main parts, sandwiched between introductory and concluding chapters. The first two chapters introduce readers to the basic concepts, provide an overview of entity-oriented search tasks, and present the various types and sources of data that will be used throughout the book. Part I deals with the core task of entity ranking: given a textual query, possibly enriched with additional elements or structural hints, return a ranked list of entities. This core task is examined in a number of different variants, using both structured and unstructured data collections, and numerous query formulations. In turn, Part II is devoted to the role of entities in bridging unstructured and structured data. Part III explores how entities can enable search engines to understand the concepts, meaning, and intent behind the query that the user enters into the search box, and how they can provide rich and focused responses (as opposed to merely a list of documents)—a process known as semantic search. The final chapter concludes the book by discussing the limitations of current approaches, and suggesting directions for future research. Researchers and graduate students are the primary target audience of this book. A general background in information retrieval is sufficient to follow the material, including an understanding of basic probability and statistics concepts as well as a basic knowledge of machine learning concepts and supervised learning algorithms.
