**North American Industry Classification System, Canada 2002** Statistics Canada. Standards Division,2003 The 2002 North American Industry Classification System (NAICS), a classification system used for organizing economic data, is a revision to the classification systems currently used by Canada, Mexico and the United States. NAICS is revised as part of a five-year revision cycle in order to ensure that the classification continues to reflect the rapidly changing structure of our economies. In this revision, the Construction sector has been harmonized across the three countries, which was not the case in NAICS 1997, and the Information and Cultural Industries sector has been updated to take into account new industries arising from the emergence of the Internet. NAICS 2002 provides a common standard framework for the collection of economic and financial data for all three countries. NAICS 2002 groups economic activity into 20 sectors and 928 Canadian industries. This classification supersedes NAICS 1997.

*North American Industry Classification System* ,2002 Study of the methodology applied for the elaboration of an industrial classification of all economic activities in the three countries of North America. Compares the North American Industry Classification System (NAICS) with the International Standard Industrial Classification (ISIC) of all economic activities adopted by the UN Statistical Commission. Includes addresses of selected U.S. government agencies involved in trade and industry.

*North American Industry Classification System, United States* ,2007 Statistics Canada, Mexico's Instituto Nacional de Estadística, Geografía Informática (INEGI), and the Economic Classification Policy Committee (ECPC) of the United States, acting on behalf of the Office of Management and Budget, have created a common classification system to replace the existing classification of each country, the Standard Industrial Classification (1980) of Canada, the Mexican Classification of Activities and Products (1994), and the Standard Industrial Classification (1987) of the United States--Preface.

Spectral Data for Highly Ionized Atoms: Ti, V, Cr, Mn, Fe, Co, Ni, Cu, Kr, and Mo Toshizo Shirai,2000-06-22 These comprehensive spectroscopic data tables for the spectra of highly ionized heavy atoms provide a valuable resource for researchers who need detailed spectroscopic information on energy levels, wavelengths, ionization energies, and oscillator strengths. Critically evaluated data for these spectroscopic quantities, both observed and calculated, are tabulated for the elements Ti, V, Cr, Mn, Fe, Co, Ni, Cu, Kr, and Mo. The tables include data for all stages of ionization from Ca-like through H-like spectra, except for Kr and Mo, which start at Ge-like and Rb-like, respectively. Typically, several hundred transitions are covered for each spectrum. The tables are arranged in order of decreasing wavelengths, and lines belonging to the same multiplet are grouped together. Forbidden lines, i.e., mainly magnetic dipole (M1) and electric quadrupole (E2) transitions are also included and are identified as such. A unified finding list, in which lines are ordered according to wavelengths, contains all the tabulated transitions. Short reviews on the line identifications and

wavelength measurements are given for each stage of ionization. The general introduction contains a discussion on the method of evaluation and some background on the compilations.
