Mediated Nostalgia Ryan Lizardi, 2014-11-06 Considering the current rash of film remakes, vintage video game downloads, and box sets of bygone television shows, media today is obsessed with nostalgia. Instead of presenting a past that functions as an adaptive mirror with which we can compare our contemporary situation, the past is instead presented as an individualized version that transfixes us as uncritical citizens of our own culture. *Mediated Nostalgia: Individual Memory and Contemporary Mass Media* argues that the cultural implication of a cross-media eternal return to nostalgia is an increasing reliance on defining who we are as people and societies by what media we consumed as children. The unblinking eye toward the past knows no progress, or at the very least, does not employ the past to compare and adaptively engage with the present or future. Examining film, literature, television, and video games, Ryan Lizardi tackles the idea of why that strong sense of nostalgia is such a popular tactic for the media industry, and why it is problematic.

The Charisma Machine Morgan G. Ames, 2019-11-19 A fascinating examination of technological utopianism and its complicated consequences. In *The Charisma Machine*, Morgan Ames chronicles the life and legacy of the One Laptop per Child project and explains why—despite its failures—the same utopian visions that inspired OLPC still motivate

other projects trying to use technology to “disrupt” education and development. Announced in 2005 by MIT Media Lab cofounder Nicholas Negroponte, One Laptop per Child promised to transform the lives of children across the Global South with a small, sturdy, and cheap laptop computer, powered by a hand crank. In reality, the project fell short in many ways—starting with the hand crank, which never materialized. Yet the project remained charismatic to many who were captivated by its claims of access to educational opportunities previously out of reach. Behind its promises, OLPC, like many technology projects that make similarly grand claims, had a fundamentally flawed vision of who the computer was made for and what role technology should play in learning. Drawing on fifty years of history and a seven-month study of a model OLPC project in Paraguay, Ames reveals that the laptops were not only frustrating to use, easy to break, and hard to repair, they were designed for “technically precocious boys”—idealized younger versions of the developers themselves—rather than the children who were actually using them. The Charisma Machine offers a cautionary tale about the allure of technology hype and the problems that result when utopian dreams drive technology development.
