**Roland Martin's 101 Bass-Catching Secrets** Roland Martin, 2008-03-02 Roland Martin, the most successful bass fisherman in history in terms of tournaments won, is a prolific source of bass fishing wisdom and sure-fire bassing tips. Both practical and discursive, Martin not only discusses why bass strike, how to use live bait, plugs, and spinners, tricks for night fishing, and how to fish logs, weeds, rocks, and trees; he also recounts how he once fished five rods at once during a school feeding frenzy, and how fellow legend Bill Dance charmed him out of a spinnerbait and beat him with it in a tournament. Full of information and great stories, Roland Martin's 101 Bass-Catching Secrets is the best guide available to help fishermen land more bass, and a revealing look at the exciting world of professional fishing.

**Manhattan** Vincent C. Jones, 2015-08-14 The U.S. Army played a key role in the formation and administration of the Manhattan Project, the World War II organization which produced the atomic bombs that not only contributed decisively to ending the war with Japan but also opened the way to a new atomic age. This volume describes how the wartime Army, already faced with the enormous responsibility of mobilizing, training, and deploying vast forces to fight a formidable enemy on far-flung fronts in Europe and the Pacific, responded to the additional task of organizing and administering what was to become the single largest technological project of its kind undertaken up to that time. To meet this challenge, the Army-drawing first upon the long-time experience and considerable resources of its Corps of Engineers-formed a new engineer organization, the Manhattan District, to take over from the Office of Scientific Research and Development administration of a program earlier established by American and refugee scientists to exploit the military potentialities of atomic energy. Eventually, however, the rapidly expanding project turned for support and services to a much broader spectrum of the Army, including the War Department, the Ordnance Department, the Signal, Medical, Military Police, and Women's Army Corps, the Military Intelligence Division of the War Department General Staff, and the Army Air Forces. These and other Army elements worked together in close collaboration with American industry and science to win what was believed to be a desperate race with Nazi Germany to be first in producing atomic weapons. For both soldiers and civilians this history of the Army's earlier experience in dealing successfully with the then novel problems of atomic science seems likely to offer some instructive parallels for finding appropriate answers to the problems faced in today's ever more technologically complex world.

Unbroken (Movie Tie-in Edition) Laura Hillenbrand, 2018-08-21 #1 NEW YORK TIMES BESTSELLER • The incredible true story of survival and salvation that is the basis for two major motion pictures: 2014's *Unbroken* and the upcoming *Unbroken: Path to Redemption*. On a May afternoon in 1943, an Army Air Forces bomber crashed into the Pacific Ocean and disappeared, leaving only a spray of debris and a slick of oil, gasoline, and blood. Then, on the ocean surface, a face appeared. It was that of a young lieutenant, the plane's bombardier, who was struggling to a life raft and pulling himself aboard. So began one of the most extraordinary odysseys of the Second World War. The lieutenant's name was Louis Zamperini. In boyhood, he'd been a cunning and incorrigible delinquent, breaking into houses, brawling, and fleeing his home to ride the rails. As a teenager, he had channeled his defiance into running, discovering a prodigious talent that had carried him to the Berlin Olympics and within sight of the four-minute mile. But when war had come, the athlete had become an airman, embarking on a journey that led to his doomed flight, a tiny raft, and a drift into the unknown. Ahead of Zamperini lay thousands of miles of open ocean, leaping sharks, a foundering raft, thirst and starvation, enemy aircraft, and, beyond, a trial even greater. Driven to the limits of endurance, Zamperini would answer desperation with ingenuity; suffering with hope, resolve, and humor; brutality with rebellion. His fate, whether triumph or tragedy, would be suspended on the fraying wire of his will. In her long-awaited new book, Laura Hillenbrand writes with the same rich and vivid narrative voice she displayed in *Seabiscuit*. Telling an unforgettable story of a man's journey into extremity, *Unbroken* is a testament to the resilience of the human mind, body, and spirit. Praise for *Unbroken*  
"Extraordinarily moving . . . a powerfully drawn survival epic."—The Wall Street Journal "[A] one-in-a-billion story . . . designed to wrench from self-respecting critics all the blurry adjectives we normally try to avoid: It is amazing, unforgettable, gripping, harrowing, chilling, and inspiring."—New York "Staggering . . . mesmerizing . . . Hillenbrand's writing is so ferociously cinematic, the events she describes so incredible, you don't dare take your eyes off the page."—People "A meticulous, soaring and beautifully written account of an extraordinary life."—The Washington Post "Ambitious and powerful . . . a startling narrative and an inspirational book."—The New York Times Book Review "Marvelous . . . *Unbroken* is wonderful twice over, for the tale it tells and for the way it's told. . . . It manages maximum velocity with no loss of subtlety."—Newsweek "Moving and, yes, inspirational .

. . [Laura] Hillenbrand’s unforgettable book . . . deserve[s] pride of place alongside the best works of literature that chart the complications and the hard-won triumphs of so-called ordinary Americans and their extraordinary time.”—Maureen Corrigan, Fresh Air “Hillenbrand . . . tells [this] story with cool elegance but at a thrilling sprinter’s pace.”—Time “Unbroken is too much book to hope for: a hellride of a story in the grip of the one writer who can handle it.”—Christopher McDougall, author of Born to Run

*Nuclear Weapons Technology 101 for Policy Wonks* Bruce Goodwin,2021-05 The making of policy for nuclear security requires a strong grasp of the associated technical matters. That grasp came naturally in the early decades of the nuclear era, when scientists and engineers were deeply engaged in policymaking. In more recent decades, the technical community has played a narrower role, one generally limited to implementing policies made by others. This narrower role has been accentuated by generational change in the technical community, as the scientists and engineers who conceived, built, and executed the programs that created the existing U.S. nuclear deterrent faded into history along with the long-term competition for technical improvements with the Soviet Union. There is thus today a clear need to impart to the new generation of nuclear policy experts the necessary technical context. That is the purpose of this paper. Specifically: to introduce a new generation of nuclear policy experts to the technical perspectives of a nuclear weapon designer, to explain the science and engineering of nuclear weapons for the policy generalist, to review the evolution of the U.S. approach to nuclear weapons design, to explain the main attributes of the existing U.S. nuclear stockpile, to explain the functions of the nuclear weapons complex, and how this all is integrated to sustain deterrence into the future.
