Metric Development During the Reorganization of the Supply Chain Management Center Douglas W. Burkman, 2003-12 This MBA Project documents a case study of an ongoing reorganization effort at the Supply Chain Management Center (SCMC), Marine Corps Logistics Command (MARCORLOGCOM), and their use of the Supply Chain Operations Reference (SCOR) Model and the Balanced Scorecard (BSC) to develop performance metrics based on sound processes. The primary focus was on the SCMC. In addition, the Source Management Department, one of SCMC's subordinate units, was a secondary focus. Background information about SCOR and BSC were reviewed, as well as what has been implemented thus far with SCMC. Finally, considerations regarding the assessment and management of suppliers were offered as recommendations.

X-SCM Lisa H Harrington, Sandor Boyson, Thomas Corsi, 2010-10-18 Supply chain management today has never been more complex, more dynamic or more unpredictable. The good news is that new techniques for analyzing country-level investments, network configuration and in-sourcing/out-sourcing decisions can enable more precise and effective span of control. The latest generation of network design and optimization applications has created broader opportunities to view and streamline links between supply chain network nodes. New concepts in multi-channel demand signal capture -- and in pooling and data warehousing customer signals coming into the enterprise from retail stores, websites and call centers -- can bring the enterprise closer to the customer. Emergence of practices such as multi-channel supply management and virtualized cross-enterprise inventory pools are enabling rapid response to changes in demand, creating a level of cyber-kanban unimaginable a few years ago. Companies can now truly respond to the pull of the market rather than the push of supply. Companies are also using advanced Business Intelligence (BI) software to mine the demand signal repository and cull critical insights for action and response. Case in point: Wal-Mart's response to Hurricane Katrina was based on insights gained from mining community consumption trends during previous hurricanes.

In Real Time Sandor Boyson, Lisa H. Harrington, Thomas M. Corsi, 2004-07-30 The age of the real-time supply chain has finally arrived. Thanks to an emerging technology construct—the Internet-based mega-portal—companies can now connect instantaneously with suppliers, distributors, manufacturers, customers, and alliance partners around the world. Online access to up-to-the-minute information enables companies to improve communication and project management across the entire supply chain, promote collaboration across departments, and enhance customer service and financial operations. The results are stunning; for example, a recent survey reports dramatic increases in revenues and customer retention and decreases in operating costs and product cycle times. Drawing from extensive primary research, this book presents detailed examples of how organizations as diverse as Coca-Cola Bottling Company, Dell, and the U.S. Department of Defense are creating information and communication hubs online and reaping the rewards. The authors explain the basic technical and organizational infrastructure necessary for launching a mega-portal and how its successful management can have profound impact on every area and function of the extended enterprise—from strategy to logistics, product development to customer service. As competition heats up from every direction, the ability to design and manage your supply chain with precision and speed becomes a business imperative. *In Real Time* offers a practical blueprint for building, implementing, and sustaining supply chains in today's rapidly changing environment.

Luby, 2004 While the commercial sector has been rapidly adopting modern, information-based supply chain systems--in order to remain competitive in the worldwide marketplace--the shift to such systems in the public sector has met with significant resistance and has moved far more slowly. *Transforming Government Supply Chain Management* provides the insights and expertise to overcoming this inertia. The second half consists of 10 case studies of public and private sector success stories.

Research Methodologies in Supply Chain Management Herbert Kotzab, Stefan Seuring, Martin Müller, Gerald Reiner, 2006-01-16 For research in all subjects and among different philosophical paradigms, research methodologies form one of the key issues to rely on. This volume brings a series of papers together, which present different research methodologies as applied in supply chain management. This comprises review oriented papers that look at what kind of methodologies have been applied, as well as methodological papers discussing new developments needed to successfully conduct research in supply chain management. The third group is made up of applications of the respective methodologies, which serve as examples on how the different methodological approaches can be applied. All papers have undergone a review process to ensure their quality. Therefore, we hope that this book will serve as a valid source for current and future researchers in the field. While the workshop on "Research Methodologies in Supply Chain Management" took place at the Supply Chain Management Center, Carl von Ossietzky University in Oldenburg, Germany, it is based on a collaboration with the Supply Chain Management Group of the Department of Operations Management at the Copenhagen Business School and the Department of Production Management at the Vienna University of Economics and Business Administration. We would like to thank all those who contributed to the workshop and this book.
