 GI for Disaster Management Orhan Altan,Tullio Joseph Tanzi,,Madhu Chandra,2021-01-20 Each year, disasters such as storms, floods, fires, volcanoes, earthquakes, and epidemics cause thousands of casualties and tremendous damage to property around the world, displacing tens of thousands of people from their homes and destroying their livelihoods. The majority of these casualties and property loss could be prevented if better information were available regarding the onset and course of such disasters. Several remote sensing technologies, such as meteorological and Earth observation satellites, communication satellites, and satellite-based positioning, supported by geoinformation technologies, offer the potential to contribute to improved prediction and monitoring of potential hazards, risk mitigation, and disaster management which, in turn, would lead to sharp reductions in losses to life and property. This book explores most of the scientific issues related to spatially supported disaster management and its integration with geographical information system technologies in different disaster examples and scales. Dealing with disasters over space and time represents a long-lasting theme, now approached by means of innovative techniques and modelling approaches. Several priorities for actions are outlined toward preventing new and reduce existing disaster risks, including understanding disaster risk, strengthening disaster risk governance for management of disaster risk, investing in disaster reduction for resilience, and enhancing disaster preparedness for effective response. This book presents ideas to address the challenges facing different components of spatial patterns related to ecological processes, and the published articles extended versions of selected presentations from the GI4DM Conference in 2019 in Prague.

 Navigating AAC Alison Battye,2022-09-30 Speech and Language Therapists are assumed to have a knowledge of AAC (Augmentative and Alternative Communication). The reality is that, unless they have had a student clinical placement in this field, they will qualify with very little experience in this area. This book is an approachable guide to AAC and covers the various types, including paper-based and voice-output communication aids. There is guidance on how to assess a person who might need AAC, and how to work collaboratively with those who support the person on a daily basis. The author discusses the importance of core vocabulary alongside a personalised vocabulary. There are pointers for referring to specialised services, signposting families to alternative sources of funding, and making a business case for buying AAC equipment. Written by an expert in the field, this book provides tips and strategies for SLTs who are brand new to AAC, as well as experienced clinicians wanting to gain further confidence in working with this varied client group.

 Literacy for Visual Learners Adele Devine,2015-10-21 This book takes a fresh look at approaches to teaching reading, writing and communication skills. It presents a wealth of innovative ideas specifically designed to support visual learners, including those with autism spectrum conditions and special educational needs. Some children are more responsive to visual stimulation than spoken words, and this book shows how to engage these children in literacy lessons by using strategies that cover everything from the latest assistive technology to getting creative on a limited budget. There are tips for sharing stories with children who find it hard to sit still, supporting reluctant writers, enabling the pre-verbal child to answer questions and helping the child who never stops talking to develop listening skills. The strategies are supported by practical resources, examples and case studies, to show how to instil in children the confidence to create and share their thoughts. This is a must-have resource for special education teachers and coordinators, as well as speech and language therapists, looking for new strategies for teaching literacy.

 Symbolism 2020 R diger Ahrens,Florian Klaeger,Klaus Stierstorfer,2020-12-07 This special anniversary volume of Symbolism explores the nexus between symbolic signification and the future from an interdisciplinary perspective. How, contributors ask, has the future been variously rendered in symbolic terms? How do symbols and symbolic reference shape our ideas of the future? To what extent are symbols constitutive of futures, and to what extent do they restrain communication about what is possible and the imagination of fundamental change? Moreover, how have symbolic practices shaped not only artistic representations of the future, but also scientific attempts at forecasting and modelling it? What, then, is the relevance of symbolism for negotiations of the future in cultural and academic production? In essays ranging from literary and film studies to the philosophy of art and ecological modelling, the volume seeks to lay groundwork in theorizing and historicising 'symbols of the future' as much as 'the future of symbolism'.

- **Digital Innovations for Mass Communications** Paul Martin Lester,2013-11-12 In every field of mass communications—advertising, entertainment studies, journalism, public relations, radio-television-film, tourism, and visual reporting—professionals understand the importance of storytelling. Regardless of whether the finished product is a commercial, an in-depth investigative piece, a public service campaign, an independent documentary, a travelogue, or a collection of photographs, effective storytelling requires a combination of creativity, empathy, and expertise. Through the innovative technologies and techniques described in this textbook, students will learn how to turn passive readers and viewers into engaged and regular users. The sixteen chapters each include a brief introduction, assignments, simple-to-follow step-by-step exercises, and sources for additional information in which users will learn to produce apps, informational graphics, quick response codes, quizzes, simulations, smartphone and table icons, social media campaigns, three-dimensional pictures, and video. Students will work with the following programs: Blogger, Dreamweaver, Excel, Facebook, GeoCommons, Google Maps, Illustrator, Imgur, iMovie, Infogram, iShowU, JavaScript, JustGive, Kaywa, Kickstarter, LinkedIn, Onvert, Photoshop, Pixel Resort, QuickTime, Reddit, Second Life, SurveyMonkey, TheAppBuilder, Twitter, Vizualize, Wikipedia, Word, WordPress, and YouTube. When digital innovations are added to traditional print and screen presentations, a media user is not only allowed to interact with the information but can also physically engage with the story displayed. Giving students the tools they need to transform their storytelling in this manner is the ultimate goal of this textbook.

In outlining the

debates relating to current data protection structures, Paolo Balboni and Kate Elizabeth Francis argue that legislation alone cannot sufficiently protect individuals' fundamental rights and freedoms, and instead consider the pressing need for a more ethical approach to data protection.

 Peter's Halakhic Nightmare John R.L. Moxon,2017-07-20 Did Luke intend Peter's visionary command to eat 'unclean animals' in Acts 10 to suggest the dissolution of the Jewish Law? Whilst scholars have argued over sources, inconsistent redaction and later reception, many have failed to notice here the novel use of a type of transgression anxiety dream. John Moxon shows how by the incorporation of such naturalistic motifs, Luke takes revelation in a new and decidedly psychological direction, probably imitating similar developments in Graeco-Roman biography. If the vision reveals an illegitimate transfer of disgust within an exaggerated halakha of separation, then its target is prejudice and inconsistency, not the Jew-Gentile divide as such, as underlined by the ironic contrast with the pious Cornelius. In this reading, Luke's non-supercessionism is maintained, whilst showing him acutely aware of the kinds of nightmare holding many back from the nascent Gentile mission.

 Visible Signs David Crow,2017-07-06 Basic semiotic theories are taught in most art schools as part of a contextual studies program, but many students find it difficult to understand how these ideas might impact on their own practice. Visible Signs tackles this problem by introducing key theories and concepts, such as signs and signifiers, and language and speech, within the framework of visual communication. Each chapter provides an overview of a particular facet of semiotic theory, with inspiring examples from graphic design, typography, illustration, advertising and art to illustrate the ideas discussed in the text. Creative exercises at the end of the book will help exemplify these ideas through practical application. The third edition of Visible Signs features new material from international designers and new creative exercises to accompany each chapter. This new edition also features a new design and layout.

 Generations & Geographies in the Visual Arts Griselda Pollock,1996 Generations and Geographies brings together a collection of artists, critics and researchers to consider the question of sexual difference and its significance in the production and reception of visual representation by women artists.
