Summary Study Guide Sapiens : a Brief History of Humankind Hyper Summary,2021 First

published in Hebrew in 2011, with the English translation following in 2014, *Sapiens: A Brief History of Humankind* examining the shaping of human history. Israeli author Yuval Noah Harari shines a light, sometimes harshly, on how humans have exploited the ideas of capitalism, religion, and politics to control the globe and put the species *Homo sapiens* on the threshold of banishing natural selection. *Sapiens* landed on the New York Times best-seller list and won the National Library of China's Wenjin Book Award for best book published in 2014. In 2019, *Sapiens* won the Academic Book Week Book of the Year award as part of the UK's Academic Book Trade Conference Awards. Harari describes the development of the human species across an evolutionary framework from the earliest stages through to the present day and concludes by sharing some sweeping predictions for our future. During the Cognitive Revolution (70,000 years ago), *Homo sapiens* developed cognitive abilities that surpassed other humans of the age. The Agricultural Revolution (10,000 years ago) brought about humans' domestication of plants and animals, and the Scientific Revolution (500 years ago) ushered in an era of exploration, science, and capitalism that defines today's societies. The Industrial Revolution (200 years ago) transformed and fashioned *Homo sapiens*, the only remaining human species, into what they are today...

Management of Chronic Viral Hepatitis Stuart Gordon,2002-09-26

Hepatitis, the leading indication for liver transplantation, is a straight-forward disease when it comes to diagnosis: it is a disease of pathology and is diagnosed by liver biopsy, with the result being either positive or negative. There is only one effective treatment: interferons. Nonetheless, new interferons are appearing on the market and Drs Foster and Goldin examine the use of each of these in the management of chronically infected patients. The authors have written a succinct, highly illustrated text for all those interested in the management of viral hepatitis.

Human Antiquity Kenneth L. Feder,Michael Alan Park,1997 Where did we come from? To answer this question, anthropologists reconstruct the human past and study the human present from both biological and cultural perspectives. *Human Antiquity* offers an absorbing, straightforward explanation of human origins and evolution by thoroughly integrating physical anthropology and archaeology. Co-authors Kenneth Feder and Michael Park combine the ideas, methods, and knowledge from both

biological anthropology and archaeology into a unified effort: Feder is an archeologist who conducts surveys, excavations, and analyses to understand the native inhabitants of New England; Park is a biological anthropologist interested in the application of evolutionary theory to the biological history of our species. .

Bozo Sapiens Michael Kaplan, Ellen Kaplan, 2009-08-01 The New York Times called *Chances Are*, the authors' look at the application of probability in everyday life, a dizzying, exhilarating ride. In *Bozo Sapiens*, they take us on another funhouse journey, exploring the surprising, or alarming, number of ways that humans can make bad judgments and poor decisions. The Kaplans' ability to explain everything from statistics to evolutionary biology in witty, accessible, and anecdotal style will endear this book to readers of *Blink*, *Freakonomics*, and other recent pop-social science successes.

Recent Mammals of Alaska Joseph A. Cook, Stephen O. MacDonald, 2010-03-15 From the polar bear and the gray wolf to the walrus and river otter, there are 115 species of mammals in Alaska that have never been fully catalogued until now. Biologists Joseph A. Cook and Stephen O. MacDonald have compiled here the first comprehensive guide to all of Alaska's mammals, big and small, endearing and ferocious. Through extensive fieldwork and research the authors have produced a unique and authoritative reference. Detailed entries for each species include distribution and taxonomic information, status, habitat, and fossil history. Appendices include quick reference listings of mammal distribution by region, specimen locations, conservation status, and the incidence of Pleistocene mammals. The guide is generously illustrated with line drawings by Alaskan artist W. D. Berry and includes several maps indicating populations and locations of species. *Mammals of Alaska* will be an accessible, easy to use source for scholars and hobbyists alike.

The Prehistory of the Sudan Elena A.A. Garcea, 2020-09-01 This volume addresses the Out-of-Africa dispersals of the earliest hominins and early anatomically modern humans, the last semi-sedentary, pottery-bearing hunters-fishers-gatherers, the early food producers and users of domestic plants and animals either local or imported from the Near East, and the presuppositions of the rise of the kingdoms of Kerma, Pharaonic Egypt, and Axum on the basis of the latest available data. Sudan played a crucial role in the development of ancient human behavior and societies and was part of an extensive network encompassing faraway areas of Africa, such as Chad, the Sahara, Egypt, Eritrea, Ethiopia, and Kenya, as well as Asia, namely the Levant, the Middle East, the Arabian Peninsula, and India. The archaeology of this country has been explored and appreciated since the 1700s and more

than 30 national and international research teams are currently active. New remarkable discoveries are unearthed every year, which are analyzed with the most up-to-date scientific techniques, and offer a prominent contribution to the general theoretical and methodological panorama of world archaeology. Beside the Nile Valley, the various geographical regions of Sudan – the deserts, savannas, and other watercourses to the west and east of the main river – are attentively taken into consideration as they formed a regional synergy that equally contributed to the far-reaching influence of Sudan's inhabitants. This book is particularly addressed to Africanist archaeologists who study other parts of Africa; to prehistorians investigating other parts of the world; to archaeology students and teachers interested in having a global view on human adaptation and behavior in ancient Sudan; to science journalists, and to antiquity admirers and learned tourists who travel to Sudan and Nubia.

A Concise Survey of Western Civilization Brian A. Pavlac,2015-02-19 This lively text offers a brief, readable description of our common Western heritage. Providing a tightly focused narrative and interpretive structure, Brian A. Pavlac covers the basic historical information that all educated adults should know. His joined terms “supremacies and diversities” develop major themes of conflict and creativity throughout history. “Supremacies” centers on the use of power to dominate societies, ranging from warfare to ideologies. Supremacy seeks stability, order, and incorporation. “Diversities” encompasses the creative impulse that produces new ideas, as well as the efforts of groups of people to define themselves as “different.” Diversity creates change, opportunity, and individuality. These themes of historical tension and change—whether applied to political, economic, technological, social, or cultural trends—offer a bridging explanatory organization. The text is also informed by five topical themes: technological innovation, migration and conquest, political and economic decision making, church and state, and disputes about the meaning of life. Throughout, judicious “basic principles” present summaries of historical realities and primary source projects offer students the chance to evaluate differing points of view about the past. Written with flair, this easily accessible yet deeply knowledgeable text provides all the essentials for courses on Western Civilization.

Some Thoughts about the Evolution of Human Behavior: A Literature Survey Arthur J.

Boucot,2021-05-20 On his death, Arthur Boucot (1924–2017) left an unfinished manuscript in which he surveyed the skeletal, behavioral, and cultural changes that have characterized Homo from its first recognition in the Late Pliocene to the present. The results, edited after his death, provide a heavily referenced sourcebook for future workers in diverse fields.

Hard Ticks (Acari: Ixodida: Ixodidae) Parasitizing Humans Alberto A. Guglielmone,Richard G.

Robbins,2018-11-01 Ticks of the family Ixodidae, commonly known as hard ticks, occur worldwide and are second only to mosquitoes as vectors of agents pathogenic to humans. Of the 729 currently recognized hard tick species, 283 (39%) have been implicated as human parasites, but the literature on these species is both immense and scattered, with the result that health professionals are often unable to determine whether a particular tick specimen, once identified, represents a species that is an actual or potential threat to its human host. In this book, two leading tick specialists provide a list of the species of Ixodidae that have been reported to feed on humans, with emphasis on their geographical distribution, principal hosts, and the tick life history stages associated with human parasitism. Also included is a discussion of 21 ixodid species that, while having been found on humans, are either not known to have actually fed or may have been misidentified. Additionally, 107 tick names that have appeared in papers on tick parasitism of humans, and that might easily confuse non-taxonomists, are shown to be invalid under the rules of zoological nomenclature. Although the species of ticks that attack humans have long attracted the attention of researchers, few comprehensive studies of these species have been attempted. By gleaning and analyzing the results of over 1,100 scientific papers published worldwide, the authors have provided an invaluable survey of hard tick parasitism that is unprecedented in its scope and detail.
