**Magic and the Dignity of Man** Brian P. Copenhaver,2019-11-19 “This book is nothing less than the definitive study of a text long considered central to understanding the Renaissance and its place in Western culture.” —James Hankins, Harvard University Pico della Mirandola died in 1494 at the age of thirty-one. During his brief and extraordinary life, he invented Christian Kabbalah in a book that was banned by the Catholic Church after he offered to debate his ideas on religion and philosophy with anyone who challenged him. Today he is best known for a short speech, the Oration on the Dignity of Man, written in 1486 but never delivered. Sometimes called a “Manifesto of the Renaissance,” this text has been regarded as the foundation of humanism and a triumph of secular rationality over medieval mysticism. Brian Copenhaver upends our understanding of Pico’s masterwork by re-examining this key document of modernity. An eminent historian of philosophy, Copenhaver shows that the Oration is not about human dignity. In fact, Pico never wrote an Oration on the Dignity of Man and never heard of that title. Instead he promoted ascetic mysticism, insisting that Christians need help from Jews to find the path to heaven—a journey whose final stages are magic and Kabbalah. Through a rigorous philological reading of this much-studied text, Copenhaver transforms the history of the idea of dignity and reveals how Pico came to be misunderstood over the course of five centuries. Magic and the Dignity of Man is a seismic shift in the study of one of the most remarkable thinkers of the Renaissance.

*Numerical Algorithms for Number Theory: Using Pari/GP* Karim Belabas,Henri Cohen,2021-06-23 This book presents multiprecision algorithms used in number theory and elsewhere, such as extrapolation, numerical integration, numerical summation (including multiple zeta values and the Riemann-Siegel formula), evaluation and speed of convergence of continued fractions, Euler products and Euler sums, inverse Mellin transforms, and complex L L-functions. For each task, many algorithms are presented, such as Gaussian and doubly-exponential integration, Euler-MacLaurin, Abel-Plana, Lagrange, and Monien summation. Each algorithm is given in detail, together with a complete implementation in the free Pari/GP system. These implementations serve both to make even more precise the inner workings of the algorithms, and to gently introduce advanced features of the Pari/GP language. This book will be appreciated by anyone interested in number theory, specifically in practical implementations, computer experiments and numerical algorithms that can be scaled to produce thousands of digits of accuracy.

*Second Order Elliptic Equations and Elliptic Systems* Ya-Zhe Chen,Lan-Cheng Wu,1998 There are two parts to the book. In the first part, a complete introduction of various kinds of a priori estimate methods for the Dirichlet problem of second order elliptic partial differential equations is presented. In the second part, the existence and regularity theories of the Dirichlet problem for linear and nonlinear second order elliptic partial differential systems are introduced. The book features appropriate materials and is an excellent textbook for graduate students. The volume is also useful as a reference source for undergraduate mathematics majors, graduate students, professors, and scientists.

*New Constructions in Cellular Automata* David Griffeath,Cristopher Moore,2003-03-27 This book not only discusses cellular automata (CA) as accouterment for simulation, but also the actual building of devices within cellular automata. CA are widely used tools for simulation in physics, ecology, mathematics, and other fields. But they are also digital toy universes worthy of study in their own right, with their own laws of physics and behavior. In studying CA for their own sake, we must look at constructive methods, that is the practice of actually building devices in a given CA that store and process in formation, replicate, and propagate themselves, and interact with other devices in complex ways. By building such machines, we learn what the CA's dynamics are capable of, and build an intuition about how to engineer the machine we want. We can also address fundamental questions, such as whether universal computation or even living things that reproduce and evolve can exist in the CA's digital world, and perhaps, how these things came to be in out own universe.

**Madness, Heresy, and the Rumor of Angels** Seth Farber,1993 This is a collection of seven true stories of individuals insulted and injured by the mental health system, individuals who then fought back, broke free, and rebuilt their lives. Madness, Heresy, and the Rumor of Angels is a work in the tradition of Thomas Szasz, R. D. Laing, and Erving Goffman, a challenge to the delusional belief-system known as psychiatry, and a protest against its appalling crimes.
