The Empty Eggs of Burning Light Lucian Randolph,2012-04-10 In 32 hours, the world as we know it will end! The magnetic field of the earth is about to fail because of a series of gigantic solar storms, which come in a 26,000 year cycle. When that happens, solar radiation will cause widespread infertility among all land animals, including us. As the storms begin causing dramatic destruction that could lead to the downfall of our technological civilization, a mysterious clue about the danger appears on an ancient artifact. While the countdown continues, major characters start coming together for the first time, building dark intrigue, ancient prophesy and cutting-edge high-technology into a series of connected events leading to the end of the world – unless it can be stopped. A mysterious consciousness and presence inside the only clue about what is happening may be the only means of preventing the coming disaster. But time is running out and the chaos has already begun. THE EMPTY EGGS OF BURNING LIGHT continues the exciting saga from THE HOLE IN THE MAGIC SHIELD. A hard science fiction tale so real some readers can't tell it's fiction, the third fast-paced thriller picks up the minute the last one stopped. The next 8.25 hours, out of only 32 hours left in the world, begin to add new characters and plots as events trigger a cascade of cause and effect. The hour-by-hour style of the modern timeline combines with larger than life characters and historical fact in a story you can't put down. The twisted mystery continues to dig deeper until a cliff-hanger ending guaranteed to make readers scream in anticipation for the next installment. But the story is only half over... ~96k words

**The Tango Effect** Kate Swindlehurst,2020-04-02 Every hour in the UK, two people are told they have Parkinson's disease. For Kate Swindlehurst, the diagnosis was a turning point: refusing to be defined by her condition, she chose instead a radically different path. This is the story of an extraordinary year. It begins with a single tango lesson but grows into an exploration of the dance itself, its history, its music and its incredible healing potential. It is a year in which Kate explored and documented 'the tango effect' – the emotional and social benefits of dance on Parkinson's symptoms. Her personal account echoes what science is beginning to tell us about the powerful and transformative impact of Argentine tango. Intimate and unflinching, The Tango Effect challenges our perceptions of living with a chronic condition. Above all, it takes an honest look at the dark side of the illness while celebrating moments of joy, interconnectedness, acceptance and liberation.

*Advances on P2P, Parallel, Grid, Cloud and Internet Computing* Fatos Xhafa,Fang-Yie Leu,Massimo Ficco,Chao-Tung Yang,2018-10-16 This book presents the latest research findings, as well as innovative theoretical and practical research results, methods and development techniques related to P2P, grid, cloud and Internet computing. It also reveals the synergies among such large scale computing paradigms. P2P, Grid, Cloud and Internet computing technologies have rapidly become established as breakthrough paradigms for solving complex problems by enabling aggregation and sharing of an increasing variety of distributed computational resources on a large scale. Grid computing originated as a paradigm for high-performance computing, offering an alternative to expensive supercomputers through different forms of large-scale distributed computing. P2P computing emerged as a new paradigm following on from client-server and web-based computing and has proved useful in the development of social networking, B2B (Business to Business), B2C (Business to Consumer), B2G (Business to Government), and B2E (Business to Employee). Cloud computing has been described as a "computing paradigm where the boundaries of computing are determined by economic rationale rather than technical limits". Cloud computing has fast become the computing paradigm with applicability and adoption in all domains and providing utility computing at large scale. Lastly, Internet computing is the basis of any large-scale distributed computing paradigm; it has very quickly developed into a vast and flourishing field with enormous impact on today's information societies and serving as a universal platform comprising a large variety of computing forms such as grid, P2P, cloud and mobile computing.

Man, Play, and Games Roger Caillois, 2001 According to Roger Caillois, play is an occasion of pure waste. In spite of this - or because of it - play constitutes an essential element of human social and spiritual development. In this study, the author defines play as a free and voluntary activity that occurs in a pure space, isolated and protected from the rest of life.

Obsessed by a Dream Aashild Sørheim, 2019-01-01 This Open Access biography chronicles the life and achievements of the Norwegian engineer and physicist Rolf Widerøe. Readers who meet him in the pages of this book will wonder why he isn't better known. The first of Widerøe's many pioneering contributions in the field of accelerator physics was the betatron. He later went on to build the first radiation therapy machine, an advance that would eventually revolutionize cancer treatment. Hospitals worldwide installed his machine, and today's modern radiation treatment equipment is based on his inventions. Widerøe's story also includes a fair share of drama, particularly during World War II when both Germans and the Allies vied for his collaboration. Widerøe held leading positions in multinational industry groups and was one of the consultants for building the world's largest nuclear laboratory, CERN, in Switzerland. He gained over 200 patents, received several honorary doctorates and a number of international awards. The author, a professional writer and maker of TV documentaries, has gained access to hitherto restricted archives in several countries, which provided a wealth of new material and insights, in particular in relation to the war years. She tells here a gripping and illuminating story.

**Three Daughters of Eve** Elif Shafak, 2017-12-05 An Indie Next Pick The stunning, timely new novel from the acclaimed, internationally bestselling author of *The Architect's Apprentice* and *The Bastard of Istanbul*. Peri, a married, wealthy, beautiful Turkish woman, is on her way to a dinner party at a seaside mansion in Istanbul when a beggar snatches her handbag. As she wrestles to get it back, a photograph falls to the ground—an old polaroid of three young women and their university professor. A relic from a past—and a love—Peri had tried desperately to forget. *Three Daughters of Eve* is set over an evening in contemporary Istanbul, as Peri arrives at the party and navigates the tensions that simmer in this crossroads country between East and West, religious and secular, rich and poor. Over the course of the dinner, and amidst an opulence that is surely ill-begotten, terrorist attacks occur across the city. Competing in Peri's mind however are the memories invoked by her almost-lost polaroid, of the time years earlier when she was sent abroad for the first time, to attend Oxford University. As a young woman there, she had become friends with the charming, adventurous Shirin, a fully assimilated Iranian girl, and Mona, a devout Egyptian-American. Their arguments about Islam and feminism find focus in the charismatic but controversial Professor Azur, who teaches divinity, but in unorthodox ways. As the terrorist attacks come ever closer, Peri is moved to recall the scandal that tore them all apart. Elif Shafak is the number one bestselling novelist in her native Turkey, and her work is translated and celebrated around the world. In *Three Daughters of Eve*, she has given us a rich and moving story that humanizes and personalizes one of the most profound sea changes of the modern world.

*From Supermarine Seafire XVII to Douglas DC-10* Ronald Williams,2012-05-19 Ron Williams flying career started in the Royal Naval Volunteer Reserve which he joined for his National Service in the 1950s. Having completed this he became a civilian pilot and embarked on a career that would see him flying an amazing variety of aircraft in all parts of the world.His first operational naval aircraft was the Seafire XVII, a direct descendent of the Spitfire. This aircraft was capable of 480 knots, and it was during his first solo flight in one that he very nearly killed himself trying to achieve that speed. Luckily he escaped unharmed but much chastened. Whilst serving with the RNVR he also went solo on the Hawker Sea Fury, the worlds fastest piston engine at that time, and also the jet powered Attacker.Having obtained his civilian pilots licence he commenced flying DC-3s for Cambrian Airways around the UK and Europe. He then moved to a charter airline, Independent Air Travel flying the Vickers Viking, then to BlueAir flying DC-4s to Hong Kong and the Far-East. Next came Airwork based in Adelaide, still on DC-4s. A return to the UK saw him flying the Bristol Freighter from Southend Airport to the near Continent carrying passengers and their cars.Tragedy nearly struck when he was attempting to deliver a Scottish Aviation Twin Pioneer from Southend to the Cape Verde Islands. One of the legs of this flight entailed a stop-over on Fuerteventura, one of the Canary Islands. Having elected to fly at night the small twin-engined aircraft hit bad weather and became lost. Unable to make radio contact and running out of fuel he was forced to ditch into the Atlantic in the eye of a hurricane. A Spanish fishing boat was fortunately to hand and rescued Ron, his co-pilot and single passenger.A move to Eire and Air Lingus followed, captaining Boeing 707s to New York and other American cities. Then came Cathay Pacific flying the Convair 880, British Airways flying BAC 1-11s and finally a twenty year stint with British Caledonian flying DC-10s. This airline was eventually merged with British Airways.This book explains many of the practical and technical aspects of commercial flight and also the pleasurable side of Rons enforced nomadic lifestyle. The story covers commercial flight from its early post-war piston-powered infancy to current airline technology and methods.
