Alloy Softening in Group VIA Metals Alloyed with Rhenium Joseph R. Stephens,Walter R. Witzke,1970 An investigation was conducted to determine the effect of temperature and composition on alloy softening in group VIA metals Cr, Mo, and W alloyed with Re. Results showed that alloy softening was similar in all three alloy systems occurring at homologous temperatures less than 0.16 and at Re concentrations less than 16 atom percent. Rhenium content required to produce a hardness minimum diminished rapidly in all three systems with increasing test temperature. The similarities in hardness behavior in these three alloy systems suggest a common softening mechanism which may arise from lowering the Peierls stress.
