Raspberry Pi OS System Administration with systemd Robert M. Koretsky,2023-11-22 The first in a new series exploring the basics of Raspberry Pi Operating System (OS) administration, this volume is a compendium of easy-to-use and essential system administration for the novice user of the Raspberry Pi OS. The overriding idea behind the system administration of a modern, 21st-century Linux system such as the Raspberry Pi OS is the use of systemd to ensure that the Linux kernel works efficiently and effectively to provide the three foundation stones of computer operation and management: computer system concurrency, virtualization, and secure persistence. Exercises are included throughout to reinforce the readers' learning goals with solutions and example code provided on the accompanying GitHub site. This book is aimed at students and practitioners looking to maximize their use of the Raspberry Pi OS. With plenty of practical examples, projects, and exercises, this volume can also be adopted in a more formal learning environment to supplement and extend the basic knowledge of a Linux operating system.

Learning C# by Programming Games Wouter van Toll, Arjan Egges, Jeroen D. Fokker, 2019-11-21 Developing computer games is a perfect way to learn how to program in modern programming languages. This book teaches how to program in C# through the creation of computer games – and without requiring any previous programming experience. Contrary to most programming books, van Toll, Egges, and Fokker do not organize the presentation according to programming language constructs, but instead use the structure and elements of computer games as a framework. For instance, there are chapters on dealing with player input, game objects, game worlds, game states, levels, animation, physics, and intelligence. The reader will be guided through the development of four games showing the various aspects of game development. Starting with a simple shooting game, the authors move on to puzzle games consisting of multiple levels, and conclude the book by developing a full-fledged platform game with animation, game physics, and intelligent enemies. They show a number of commonly used techniques in games, such as drawing layers of sprites, rotating, scaling and animating sprites, dealing with physics, handling interaction between game objects, and creating pleasing visual effects. At the same time, they provide a thorough introduction to C# and object-oriented programming, introducing step by step important programming concepts such as loops, methods, classes, collections, and exception handling. This second edition includes a few notable updates. First of all, the book and all example programs are now based on the library MonoGame 3.6, instead of the obsolete XNA Game Studio. Second, instead of explaining how the example programs work, the text now invites readers to write these programs themselves, with clearly marked reference points throughout the text. Third, the book now makes a clearer distinction between general (C#) programming concepts and concepts that are specific to game development. Fourth, the most important programming concepts are now summarized in convenient “Quick Reference” boxes, which replace the syntax diagrams of the first edition. Finally, the updated exercises are now grouped per chapter and can be found at the end of each chapter, allowing readers to test their knowledge more directly. The book is also designed to be used as a basis for a game-oriented programming course. Supplementary materials for organizing such a course are available on an accompanying web site, which also includes all example programs, game sprites, sounds, and the solutions to all exercises.

Cocoa Programming for OS X Aaron Hillegass, Adam Preble, Nate Chandler, 2015-04-16 Covering the bulk of what you need to know to develop full-featured applications for OS X, this edition is updated for OS X Yosemite (10.10), Xcode 6, and Swift. Written in an engaging tutorial style and class-tested for clarity and accuracy, it is an invaluable resource for any Mac programmer. The authors introduce the two most commonly used Mac developer tools: Xcode and Instruments. They also cover the Swift language, basic application architecture, and the major design patterns of Cocoa. Examples are illustrated with exemplary code, written in the idioms of the Cocoa community, to show you how Mac programs should be written. After reading this book, you will know enough to understand and utilize Apple's online documentation for your own unique needs. And you will know enough to write your own stylish code. This edition was written for Xcode 6.3 and Swift 1.2. At WWDC 2015, Apple announced Xcode 7 and Swift 2, both of which introduce significant updates that (along with some changes to Cocoa for OS X 10.11) affect some of the exercises in this book. We have prepared a companion guide listing the changes needed to use Xcode 7 to work through the exercises in the book; it is available at <https://github.com/bignerdranch/cocoa-programming-for-osx-5e/blob/master/Swift2.md>.

A Study of Visual Performance Using Ophthalmic Filters Merrill J. Allen, 1962 A study of the visual performance through five regularly available ophthalmic filter glasses, five identical filter glasses uniformly coated to 10 percent transmission, and five other identical filter glasses with a gradient density coating transmitting 10 percent in the center of the lens and about 0.1 percent at the top of the lens was made using a 7- by 8- by 24-foot atmosphere chamber to simulate flight under adverse glare conditions. Controlled atmospheric conditions and chamber wall luminances of 7000 foot-lamberts and 400 foot-lamberts were provided. The far point test target was a threshold 1/2° white spot variable in brightness relative to the surround. The near target was a randomly presented number target set in a Link Trainer instrument panel. Panel luminances ranging from 0.1 to 0.43 percent of fog room wall luminances were provided and the subject's response time to adapt to the near target after adjusting the threshold spot at distance was the measure of visual performance through the specific filter being worn. Six subjects were used. Approximately 10,000 judgments were recorded and analyzed for this study. The average time (under average experimental conditions using all subjects) required to identify a target on the instrument panel without sunglasses was 0.5994 sec.; with ordinary sunglasses, 0.6093 sec.; with uniform coating, 0.7603 sec.; and with gradient coating, 0.5057 sec. These include over 300 findings for the no sunglasses to 1800 findings for the gradient coating. Differences in performance could be accounted for on the basis of overall transmission effects without regard to filter color. All observers disliked the yellow filters. Threshold distant target recognition through gradient density filters was the poorest at low levels but the best at high levels by a narrow margin. Vision tended to be as good or better unaided than with most filters for a distant threshold target at about 490 foot-lamberts. However, at about 7000 foot-lamberts, the gradient density filter was again superior.--Abstract.

Radar Cross Section Measurements Eugene F. Knott, 2012-12-06 The original campus of the University of Michigan was nearly a perfect square about a half-mile along a side. A street-sized walk, appropriately called the Diag, runs diagonally across this square, connecting its southeast and northwest corners. In 1904 a new engineering building was either started or finished (I do not remember which) to house classrooms. When another engineering building was built on the expanded campus across the street from it many years later, the old building came to be known as West Engine, to distinguish it from the new East Engine. Old West Engine is (or maybe by now, was) a four-story, L-shaped structure that stood at the southeast corner of the original campus. It was built with an arch in it to straddle the Diag at the apex of the L. You walked over the Engineering Arch to get from one leg of the L to the other if you were inside the building, and you walked under it when you entered the campus from the southeast corner. Affixed to the masonry wall of the arch was a plaque I often noted in passing. It bore a quote attributed to Horace Greeley (1811-1872), who I did not know at the time was the founder, editor, and publisher of the New York Tribune. It said, simply, Young man, when theory and practice differ, use your horse sense. The suggestion seems worthy of an exclamation point instead of a period, but I do not remember if it had one.
