Introduction to AI Robotics, second edition Robin R. Murphy, 2019-10-01 A comprehensive survey of artificial intelligence algorithms and programming organization for robot systems, combining theoretical rigor and practical applications. This textbook offers a comprehensive survey of artificial intelligence (AI) algorithms and programming organization for robot systems. Readers who master the topics covered will be able to design and evaluate an artificially intelligent robot for applications involving sensing, acting, planning, and learning. A background in AI is not required; the book introduces key AI topics from all AI subdisciplines throughout the book and explains how they contribute to autonomous capabilities. This second edition is a major expansion and reorganization of the first edition, reflecting the dramatic advances made in AI over the past fifteen years. An introductory overview provides a framework for thinking about AI for robotics, distinguishing between the fundamentally different design paradigms of automation and autonomy. The book then discusses the reactive functionality of sensing and acting in AI robotics; introduces the deliberative functions most often associated with intelligence and the capability of autonomous initiative; surveys multi-robot systems and (in a new chapter) human-robot interaction; and offers a “metaview” of how to design and evaluate autonomous systems and the ethical considerations in doing so. New material covers locomotion, simultaneous localization and mapping, human-robot interaction, machine learning, and ethics. Each chapter includes exercises, and many chapters provide case studies. Endnotes point to additional reading, highlight advanced topics, and offer robot trivia.

TERRORISM: COMMENTARY ON SECURITY DOCUMENTS VOLUME 144 Douglas Lovelace Jr., 2016-09-05 Terrorism: Commentary on Security Documents is a series that provides primary source documents and expert commentary on various topics relating to the worldwide effort to combat terrorism, as well as efforts by the United States and other nations to protect their national security interests. Volume 144, Autonomous and Semiautonomous Weapons Systems, examines the impact of robots and autonomous and semiautonomous weapons systems on the waging of modern warfare. It considers the likely effects of emerging technological innovations in this area from both a political and strategic standpoint, in addition to considering the implications of such technologies within the context of the law of armed conflict and international humanitarian law. This volume is divided into three sections: (1) U.S. policy and approaches to the use of autonomous and semiautonomous weapons systems; (2) U.S. armed forces use of such weapons systems; and (3) potential terrorist use of such weapons systems. Official policy documents from the DoD and the U.S. Army and Air Force are complemented by reports from the Strategic Studies Institute/Army War College Press and other U.S. military sources.

Workshop Proceedings of the 6th International Conference on Intelligent Environments Ramón López-Cózar, H. Taskable Reactive Agent Communities, 2002 The focus of Taskable Reactive Agent Communities (TRAC) project was to develop mixed-initiative technology to enable humans to supervise and manage teams of agents as they perform tasks in dynamic environments. TRAC technology would enable users to task agent communities in a high-level language that provides both descriptions of goals to be satisfied and boundaries on agent behavior. The TRAC approach can be viewed as providing a form of high-level process management technology that enables flexible human control of agent communities. In particular, the TRAC framework is intended to support applications where processes are distributed and automated, but where human guidance can improve performance and increase flexibility. The technical work for the project focused on identifying useful categories of guidance for directing agents, designing languages for expressing guidance, and developing techniques for operationalizing guidance into constraints that influence agent behavior. Because users may provide incompatible or unsatisfiable guidance to agents, the work also encompassed techniques for detecting and resolving conflicting guidance. The TRAC implementation was used as the basis for a demonstration system called TIGER (TRAC Intelligence Gathering and Emergency Response), which focused on the problem of multiagent intelligence gathering in the wake of a simulated natural disaster. Within TIGER, a human supervisor can delegate tasks to agents while providing guidance to control their runtime behavior.

Anticipatory Behavior in Adaptive Learning Systems Martin V. Butz, Olivier Sigaud, Pierre Gérard, 2004-01-21 The interdisciplinary topic of anticipation, attracting attention from computer scientists, psychologists, philosophers, neuroscientists, and biologists is a rather new and often misunderstood matter of research. This book attempts to establish anticipation as a research topic and encourage further research and development work. First, the book presents philosophical thoughts and concepts to stimulate the reader's concern about the topic. Fundamental cognitive psychology experiments then confirm the existence of anticipatory behavior in animals and humans and outline a first framework of anticipatory learning and behavior. Next, several distinctions and frameworks of anticipatory processes are discussed, including first implementations of these concepts. Finally, several anticipatory systems and studies on anticipatory behavior are presented.

Designing a Total Data Solution Roxanne Burkey, Charles V. Breakfield, 2000-09-28 Your company's global competitiveness depends on the utilization and maintenance of information. Current data handling practices—storing, updating, and accessing data—can be either a problem or a significant strategic advantage for your company. Designing a Total Data Storage Solution: Technology, Implementation, and Deployment gives you the inform

"Swing the Sickle for the Harvest is Ripe" Daina Ramey Berry, 2007 Swing the Sickle for the Harvest Is Ripe compares the work, family, and economic experiences of enslaved women and men in upcountry and lowland Georgia during the nineteenth century. Mining planters' daybooks, plantation records, and a wealth of other sources, Daina Ramey Berry shows how slaves' experiences on large plantations, which were essentially self-contained, closed communities, contrasted with those on small plantations, where planters' interests in sharing their workforce allowed slaves more open, fluid communications. By inviting readers into slaves' internal lives through her detailed examination of domestic violence, separation and sale, and forced breeding, Berry also reveals important new ways of understanding what it meant to be a female or male slave, as well as how public and private aspects of slave life influenced each other on the plantation.

Robot Ecology Magnus Egerstedt, 2021-12-28 A revolutionary new framework that draws on insights from ecology for the design and analysis of long-duration robots Robots are increasingly leaving the confines of laboratories, warehouses, and manufacturing facilities, venturing into agriculture and other settings where they must operate in uncertain conditions over long timescales. This multidisciplinary book draws on the principles of ecology to show how robots can take full advantage of the environments they inhabit, including as sources of energy. Magnus Egerstedt introduces a revolutionary new design paradigm—robot ecology—that makes it possible to achieve long-duration autonomy while avoiding catastrophic failures. Central to ecology is the idea that the richness of an organism's behavior is a function of the environmental constraints imposed by its habitat. Moving beyond traditional strategies that focus on optimal policies for making robots achieve targeted tasks, Egerstedt explores how to use survivability constraints to produce both effective and provably safe robot behaviors. He blends discussions of ecological principles with the development of control barrier functions as a formal approach to constraint-based control design, and provides an in-depth look at the design of the SlothBot, a slow and energy-efficient robot used for environmental monitoring and conservation. Visionary in scope, Robot Ecology presents a comprehensive and unified methodology for designing robots that can function over long durations in diverse natural environments.

Do the Right Thing Stuart Jonathan Russell, Eric Wefald, 1991 Like Mooki, the hero of Spike Lee's film Do the Right Thing artificially, intelligent systems have a hard time knowing what to do in all circumstances. Classical

theories of perfect rationality prescribe the right thing for any occasion, but no finite agent can compute their prescriptions fast enough. In *Do the Right Thing*, the authors argue that a new theoretical foundation for artificial intelligence can be constructed in which rationality is a property of programs within a finite architecture, and their behaviour over time in the task environment, rather than a property of individual decisions.

Multiprocessing in Meteorological Models Geerd-R. Hoffmann,David F. Snelling,2012-12-06 Numerical weather prediction on the one hand needs a very large number of floating point calculations, but on the other hand is very time-critical. Therefore, the largest computers available, i.e., the supercomputers, have usually been acquired by the national meteorological services long before they were used in other fields of research or business. Since the available technology limits the speed of any single computer, parallel computations have become necessary to achieve further improvements in the number of results produced per time unit. This book collects the papers presented at two workshops held at ECMWF on the topic of parallel processing in meteorological models. It provides an insight into the state-of-the-art in using parallel processors operationally and allows extrapolation to other time-critical applications. It also shows trends in migrating to massive parallel systems in the near future.

Edisto Island, 1663 to 1860 Charles Spencer,2008-03-14 Beautiful Edisto Island has not always been a vacationers’ haven in the South Carolina Lowcountry. Before European settlement, it was home to the Edisto Indians and a wide variety of wildlife. Author Charles Spencer chronicles Edisto’s history, from the early days when English and Scottish planters and their African slaves settled the lush island paradise and established plantations that flourished until the Civil War. *Wild Eden to Cotton Aristocracy* is an impeccably researched and superbly written must-read for all whose hearts call Edisto home.

Basic Research in Information Science and Technology for Air Force Needs National Research Council,Board on Mathematical Sciences and Their Applications,Committee on Directions for the AFOSR Mathematics and Space Sciences Directorate Related to Information Science and Technology,2006-02-23 The U.S. Air Force is developing new force capabilities appropriate to an emerging array of threats. It is clear that advances in information science and technology (IS&T) are essential for most of these new capabilities. As a consequence, the Air Force is finding it necessary to refocus its IS&T basic research program to provide stronger support for reaching these goals. To assist this effort, the AFOSR asked the NRC for a study to create a vision and plan for the IS&T-related programs within the Office's Mathematics and Space Science Directorate. This report provides an assessment of basic research needs for Air Force systems and communications, software, information management and integration, and human interactions with IS&T systems. The report also offers a set of priorities for basic IS&T research, and an analysis of funding mechanisms its support.
