**Underground Spaces** C. A. Brebbia,D. Kaliampakos,2008 It is a strongly held belief that population growth and the demand for better accommodation and leisure facilities, combined with a desire to improve the landscape, will result in the need to develop more underground spaces. This phenomenon, which started in countries subjected to extreme climates, is now becoming more widespread. Underground spaces are being utilized for a wide diversity of needs. They range from classical excavations to subway constructions; underground sports halls; power stations; waste repositories; underground cities, and many others. Their construction techniques are also varied, from open-air excavations to newly developed injection methods. The response of the underground structures on the imposed loadings depends on a number of parameters that sometimes are too complex or not fully understood, resulting in budget overruns or even failures that lead to loss of property or life. Such uncertain cases need to be addressed and engineers should be able to accurately predict the construction's performance throughout its construction and service life. The First International Conference on Underground Spaces discusses not only structural and environmental material characterization aspects but also the trends regarding the utilization of underground spaces. This book contains papers presented at the Meeting, and covers a wide range of topics including: Use of underground space for industry; Underground power stations; Toxic and nuclear waste repositories; Energy underground reservoirs; Underground sewerage plants; Waste storage and management; Road and railway tunnels; Utility tunnels; Fire defence; Defence against terrorist attacks.

Civil Engineering for Underground Rail Transport J. T. Edwards,2015-12-04 Civil Engineering for Underground Rail Transport focuses on civil engineering techniques in underground rail construction. The book first discusses the need for underground rail transport, including justification of underground systems and the techniques of civil engineering in underground construction. The text looks at civil engineering aspects of route planning. Curvature and gradients, drainage, ventilation, working sites, rolling stock depots, and construction materials are discussed. The book also discusses civil engineering aspects of station location and design, ground treatment, and tracks for underground railways. The text then examines cut and cover design and construction in reinforced concrete. Form and layout, construction methods, soil/structure interaction, reinforced concrete design, and design development are described. The compilation also looks at the construction of concrete piling and diaphragm walls, hand-dug caissons or wells, large reinforced concrete caissons, and immersed-tube and precast concrete tunnels. Tunneling machines and types of tunnels are also described. The book is a good source of information for readers interested in civil engineering.

*TBM Excavation in Difficult Ground Conditions* Nuh Bilgin,Hanifi Copur,Cemal Balci,2016-12-12 The book relates experience of TBM drives in difficult geology, making use of case studies from Turkey to demonstrate the influence of the local geotechnical conditions on the selection of a tunnel boring machine and the selection of tools. There is an extensive description how various geological phenomena, such as for example transition zones, dikes, rock discontinuities, blocky ground, squeezing ground, swelling clays and high strength and abrasive rocks, can reduce the advance rate and what countermeasures can be introduced. There is also a discussion of necessary advance probing and safety measures. Since the presented practical experience from Turkey can also be applicable for other tunnel projects in difficult geology, the book represents a valuable source of knowledge for every tunneler.

**Macaulay** Robert E. Sullivan,2010-03-09 On the 150th anniversary of the death of the English historian and politician Thomas Babington Macaulay, Robert Sullivan offers a portrait of a Victorian life that probes the cost of power, the practice of empire, and the impact of ideas. His Macaulay is a Janus-faced master of the universe: a prominent spokesman for abolishing slavery in the British Empire who cared little for the cause, a forceful advocate for reforming Whig politics but a Machiavellian realist, a soaring parliamentary orator who avoided debate, a self-declared Christian, yet a skeptic and a secularizer of English history and culture, and a stern public moralist who was in love with his two youngest sisters. Perhaps best known in the West for his classic History of England, Macaulay left his most permanent mark on South Asia, where his penal code remains the law. His father ensured that ancient Greek and Latin literature shaped Macaulay’s mind, but he crippled his heir emotionally. Self-defense taught Macaulay that power, calculation, and duplicity rule politics and human relations. In Macaulay’s writings, Sullivan unearths a sinister vision of progress that prophesied twentieth-century genocide. That the reverent portrait fashioned by Macaulay’s distinguished extended family eclipsed his insistent rhetoric about race, subjugation, and civilizing slaughter testifies to the grip of moral obliviousness. Devoting his huge talents to gaining power—above all for England and its empire—made Macaulay’s life a tragedy. Sullivan offers an unsurpassed study of an afflicted genius and a thoughtful meditation on the modern ethics of power.

Intelligent Robotics and Applications Ming Xie,Youlun Xiong,Caihua Xiong,Zhencheng Hu,2009-12-16 The market demands for skills, knowledge and personalities have positioned robotics as an important field in both engineering and science. To meet these challenging - mands, robotics has already seen its success in automating many industrial tasks in factories. And, a new era will come for us to see a greater success of robotics in n- industrial environments. In anticipating a wider deployment of intelligent and auto- mous robots for tasks such as manufacturing, eldercare, homecare, edutainment, search and rescue, de-mining, surveillance, exploration, and security missions, it is necessary for us to push the frontier of robotics into a new dimension, in which motion and intelligence play equally important roles. After the success of the inaugural conference, the purpose of the Second Inter- tional Conference on Intelligent Robotics and Applications was to provide a venue where researchers, scientists, engineers and practitioners throughout the world could come together to present and discuss the latest achievement, future challenges and exciting applications of intelligent and autonomous robots. In particular, the emphasis of this year’s conference was on “robot intelligence for achieving digital manufact- ing and intelligent automations. ” This volume of Springer’s Lecture Notes in Artificial Intelligence and Lecture Notes in Computer Science contains accepted papers presented at ICIRA 2009, held in Singapore, December 16–18, 2009. On the basis of the reviews and recommendations by the international Program Committee members, we decided to accept 128 papers having technical novelty, out of 173 submissions received from different parts of the world.
