Techno Ray Ogar,2000-10-30 America. today. walking through the city. life is modular. mix and match friends. cell phones. disposable computers. bored kids creating self tailored disorders. finally, sexuality is not an issue. besides its a currency in itself. accelerating technology. and music. and raves. and djs. life is a record where the turntable needle plays only the good parts. floating political communities of winnable radicals where information is prestige. so some thing. wish. want. and believe. isolated micro-communes. a global mega corporation with only three employees. girls who study the history of the united states through all of its 2 am parties. guys who try to forget life from day to day and unknowingly sell their memories on the emotional black market. shopping is a lifestyle. design is a nation. nanotechnology in the hands of the young. some checkout mainframe computers from the local library. others obsess over new versions of the united states that upload daily across the internet.

Techno-Fix Michael Huesemann,Joyce Huesemann,2011-10-04 Nanotechnology! Genetic engineering! Miracle Drugs! We are promised that new technological developments will magically save us from the dire consequences of the 300-year fossil-fueled binge known as modern industrial civilization, without demanding any fundamental changes in our behavior. There is a pervasive belief that technological innovation will enable us to continue our current lifestyle indefinitely and will prevent social, economic and environmental collapse. Techno-Fix shows that negative unintended consequences of technology are inherently predictable and unavoidable, techno-optimism is completely unjustified, and modern technology, in the presence of continued economic growth, does not promote sustainability, but hastens collapse. The authors demonstrate that most technological solutions to social and technology-created problems are ineffective. They explore the reasons for the uncritical acceptance of new technologies, show who really controls the direction of technological change, and then advocate extensive reform. This comprehensive exposé is a powerful argument for why we can and should put the genie back in the bottle. An insightful and powerful critique, it is required reading for anyone who is concerned about blind techno-optimism and believes that the time has come to make science and technology more socially and environmentally responsible. The Song of the Machine David Blot,Mathias Cousin,2019-10-08 A pulsating graphic novel on the epic history of electronic music, from the heyday of disco in the 1970s to the rave culture of the 1990s and beyond. With a foreword from house music legends Daft Punk, The Song of the Machine is a celebration of a musical wave that swept across the world over decades, demographics, and dance styles. Originally published in 2000 in France, and updated through today for this first English edition, the electrifying narrative introduces readers to the harbingers of the genre, such as David Mancuso, Larry Levan, and Frankie Knuckles (known as the Godfather of House Music); the prototypes of modern-day nightclubs and dance venues, like The Loft and Studio 54 in New York City, the Palace in Paris, and the Hacienda in Manchester, England, and of course, the technology and machines that first produced and synthesized the records that galvanized a movement. Told through exciting illustrations that evolve with the era they describe, and complete with specially curated playlists for each and every decade, The Song of the Machine recounts the influences and inspirations, the people and epic parties that created and defined this revolutionary music.

The Tsar of Love and Techno Anthony Marra,2016-08-04 A Granta Best Young American Novelist 1930s Leningrad: a failed portrait artist employed by Soviet censors must erase political dissenters from official images and artworks. One day, he receives an antique painting. The mystery behind this painting threads together each of the stories that follow, where we meet a Siberian beauty queen, a young soldier in the battlefields of Chechnya, the Head of the Grozny Tourist Bureau, a ballerina performing for the camp director of a gulag and many others.

Techno-Geopolitics Pak Nung Wong,2021-09-23 Techno-Geopolitics explores contemporary U.S.–China relations and the future of global cyber-security through the prisms of geopolitics and financial-technological competition. It puts forward a new conceptual framework for an emerging field of digital statecraft and discusses a range of key issues including the controversies around 5G technology, policy regulations over TikTok and WeChat, the emergence of non-traditional espionage, and potential trends in post-pandemic foreign policy. Analysing the ramifications of the ongoing U.S.–China trade standoff, this book maps the terrain of technological war and the race for global technological leadership and economic supremacy. It shows how China's technological advancements not only have been the key to its national economic development but also have been the core focus of U.S. intelligence. Further, it draws on U.S.–China counterintelligence cases sourced from the U.S. Department of Justice and Federal Bureau of Investigation (FBI) to explore emerging patterns and techniques of China's espionage practice. A cutting-edge study on the future of statecraft, this volume will be of great interest to scholars and researchers of international relations, security and intelligence studies, information technology and artificial intelligence and political science, especially U.S. foreign policy and China studies. It will also be of great interest to policymakers, career bureaucrats, security and intelligence practitioners, technology regulators, and professionals working with think tanks and embassies.

A Way Through the Global Techno-Scientific Culture Sheldon Richmond,2020-04-07 Computers are supposed to be smart, yet they frustrate both

ordinary users and computer technologists. Why are people frustrated by smart machines? Computers don't fit people. People think in terms of comparisons, stories, and analogies, and seek feedback, whereas computers are based on a fundamental design that does not fit with analogical and feedback thinking. They impose a binary, an all-or-nothing, approach to everything. Moreover, the social world and institutions that have developed around computer technology hide and reinforce the lack of alignment between computers and people. This book suggests a solution: we do not have to accept the way things are now and work around the bad social and technical design of computers. Rather, it proposes a diverse, distributed, critical discussion of how to design and build both computer technology and its social institutions.

Global Techno (Working Title) ,2022-10-25

Techno-logic & Technology Éric Boëda,2023-05-31 Techno-logic & Technology is an ambitious effort to develop a new framework for studying the development of stone tool technology, with the goal of integrating humanity's earliest and longest-lasting technology into a comprehensive questioning of the interaction between humanity and the material world. Michael Chazan provides a translation of Éric Boëda's authoritative work Techno-logique and Technologie, which draws on the latter's career of research on stone tool assemblages from archaeological sites in Europe, the Middle East, China, and South America, together with a theoretical apparatus influenced by the work of Gilbert Simondon. This book presents a major challenge to all archaeologists studying ancient technology to reconsider how they think about artifacts and how to approach the question of progress through time in human technology. Lithic analysis is a highly empirical field of study that rarely has an impact on issues of broad theoretical interest, and Boëda's book is a welcome exception. As well as providing contextualising information within the text, the translator Michael Chazan, himself a Paleolithic archaeologist specializing in stone tool technology, includes an interview with the author to help equip the reader to engage with this challenging text. Chiming with the growth of interest in the work of Gilbert Simondon in the English-speaking world, this book is an important resource for Palaeolithic archaeologists and lithic specialists. It will also be of interest to researchers in material culture studies, technology studies, and human evolution.

Birthing Techno-Sapiens Robbie Davis-Floyd,2021-03-31 This ground-breaking book challenges us to re-think ourselves as techno-sapiens—a new species we are creating as we continually co-evolve ourselves with our technologies. While some of its chapters are imaginary, they are all empirically grounded in ethnography and richly theorized from diverse disciplines. The authors go far beyond a techno-optimism vs. techno-pessimism stance, stretching our thinking about birthing techno-sapiens to consider not only how our cyborgian reproductive lives are constrained and/or enabled by technology but are also about emotions and spirit. The world of reproductive health care and particularly that of genetic engineering is developing exponentially, and current challenges are vastly different from those of a decade ago. The book is provocative, intended to generate debate, ideas, and future research and to influence ethical policy and practice in human techno-reproduction. It will be of interest across the social sciences and humanities, for reproductive scholars, bioethicists, techno-scientists, and those involved in the development and delivery of maternity services.

State Policies and Techno-Industrial Innovation Ulrich Hilpert,2002-01-31 Behind the rhetoric of `intervention' and `deregulation' which has accompanied state attempts to stimulate technological innovation in the last decade is secreted a story of failed ambitions, confusion, muddle and incoherence. Techno-industrial innovation does make demands on the state, not only in terms of new industries, but also in regard to the inter-relation of industrial and R&D policy and the creation of markets. This book provides a comparative analysis of techno-industrial innovation in Europe, Japan and the USA. Drawing on case studies ranging from the semi-conductor to the biotechnology industries, the book presents a comprehensive and detailed survey of national strategies for the internal and world markets and sets them in their political context, where `the costs may be high and the pay-offs uncertain'.

Techno-Anthropology in Health Informatics L. Botin,P. Bertelsen,C. Nøhr,2015-08-06 Techno-Anthropology is an emerging interdisciplinary research field focusing on human/technology interactions and relations, and how these can be understood and facilitated in context. Techno-Anthropology also considers how technological innovation, development and implementation can be made in an appropriate and pragmatic way in relation to understanding work practices. Techno-Anthropology has much to offer the health informatics and eHealth fields, and this book presents the work of experienced international researchers who share here how they have applied Techno-Anthropology methodologies to their research. The book is divided into three sections: ethnographic and anthropological perspectives on methodology; ethical and sociotechnical approaches; and users, participation and human factors. Topics covered include: learning the craft of Techno-Anthropology; anthropological approaches in studying technology induced errors; technology and the ecology of chronic illness in everyday life; Techno-Anthropologists as agents of change; and using rapid ethnography to support the design and implementation of health information technologies, as well as many more. Of interest to researchers and practitioners within the health informatics field as well as students and scholars, the book will inspire researchers and practitioners to examine health informatics from a new perspective.

Techno-Ready Marketing Charles L. Colby,A. Parasuraman,2001-10-05 Conventional techniques for marketing technology products fail primarily because marketers do not truly understand their customers. Do you know what customers really think about your technology? Now, drawing on their award-winning research and case studies ranging from America Online to the Discovery Channel, marketing experts A. Parasuraman and Charles L. Colby demonstrate how the adoption of technology is influenced by unique beliefs that do not apply to conventional products and services. In the context of a general set of powerful techno-marketing strategies, Parasuraman and Colby introduce Technology Readiness (TR), a groundbreaking concept that enables you to measure and assess a customer's predisposition to adopt new technologies. Employing their TR construct -- a psychological amalgam of fears, hopes, desires, and frustrations about technology -- the authors identify five types of technology customers: the highly optimistic and innovative Explorers, the innovative yet cautious Pioneers, the uncertain Skeptics who need the benefits of technology proved, the insecure Paranoids, and the resistant Laggards. Using this typology, you can customize your technology strategies by combining insights from your context-specific assessments with general marketing strategies presented in the book. Essential reading in technology companies will be the chapter devoted to Parasuraman's Pyramid Model, which explains the critical role technology plays in a marketing organization as a link between employees, the organization, and the customer. Finally, the authors have included a self-administered quiz so you can score your own Technology Readiness and a chapter on the Techno-Ready Marketing Audit to provide a framework for taking immediate action based on the precepts in this book.
