Singing from Scratch Michael Graves, 2015-03-19 How to sing book for absolute beginners and pros alike written by a professional performer with 30 plus years of actual experience singing and teaching. This is a READ and DO book with 61 practical drills specifically designed to get fast unshakable results. This is NOT a fluff book with useless filler, or a tiny pamphlet written by a human book mill with no real experience as a performer, only to be passed off as a legitimate instructional book. The author, Michael Graves, is an accomplished performer/singer and vocal coach. See the author's page link under the title for more information about Michael and the book's website for video clips of recent performances. As the title suggests, Singing From Scratch starts with building the foundation of the foundation for any singer by uncovering the 'It Factor' and goes on to prove that the 'It Factor' is something everyone possesses, but is simply undeveloped. Then, in an easy to follow, systematic, interactive and fun manner, the reader develops the ability to not only sing, but to sing as well as any pro. If you have been told you are 'tone deaf', understand that there is no such thing. You can sing. This book will show you how. If you are an accomplished singer looking to improve your ability and sing better, the information and drills in this book will do just that. And the book doesn't stand alone. The website for the book provides additional support in the form of instructional videos, audio samples, and a blog written by the author as well as links to his

podcast. Singing From Scratch and all ancillary works are based on the Conceptual Singing Method . A proven vocal instruction method developed by Michael Graves.

The Art of Piano Playing George Kochevitsky,1995-11-16 So many of the great pianists and teachers have come out of Poland and Russia (Rubinstein, Anton as well as Arthur, Leschetizky, Paderewski, the Lhevinnes, Gilels, Richter, and others), yet we know little about their methods of learning and teaching. George Kochevitsky in The Art of Piano Playing supplies some important sources of information previously unavailable in the United States. From these sources, tempered by this own thinking, Kochevitsky formulated a scientific approach that can solve most problems of piano playing and teaching. George Kochevitsky graduated in 1930 from Leningrad Conservatory and did post-graduate work at Moscow Conservatory. After coming to the U.S., he taught privately in New York City, gave a number of lectures, and wrote for various music periodicals.

Artificial Intelligence Accelerates Human Learning Katashi Nagao, 2019-02-02 Focusing on students' presentations and discussions in laboratory seminars, this book presents case studies on evidence-based education using artificial intelligence (AI) technologies. It proposes a system to help users complete research activities, and a machine-learning method that makes the system suitable for long-term operation by performing data mining for discussions and automatically extracting essential tasks. By illustrating the complete process - proposal, implementation, and operation - of applying machine learning techniques to real-world situations, the book will inspire researchers and professionals to develop innovative new applications for education. The book is divided into six chapters, the first of which provides an overview of AI research and practice in education. In turn, Chapter 2 describes a mechanism for applying data analytics to student discussions and utilizing the results for knowledge creation activities such as research. Based on discussion data analytics, Chapter 3 describes a creative activity support system that effectively utilizes the analytical results of the discussion for subsequent activities. Chapter 4 discusses the incorporation of a gamification method to evaluate and improve discussion skills while maintaining the motivation to participate in the discussion. Chapters 5 and 6

describe an advanced learning environment for honing students' discussion and presentation skills. Two important systems proposed here are a presentation training system using virtual reality technologies, and an interactive presentation/discussion training system using a humanoid robot. In the former, the virtual space is constructed by measuring the three-dimensional shape of the actual auditorium, presentations are performed in the same way as in the real world, and the AI as audience automatically evaluates the presentation and provides feedback. In the latter, a humanoid robot makes some remarks on and asks questions about students' presentations, and the students practice responding to it.

He focuses on general concepts, while using platforms as examples or as possible tools. After introducing UML, XML and derivative tools necessary for developing mobile software applications, B'far shows how to build user interfaces for mobile applications. He covers location sensitivity, wireless connectivity, mobile agents, data synchronization,

security, and push-based technologies, and finally homes in on the practical issues of mobile application development including the development cycle for mobile applications, testing mobile applications, architectural concerns, and a case study.

<u>The Talent Code</u> Daniel Coyle,2009-04-28 What is the secret of talent? How do we unlock it? This groundbreaking work provides readers with tools they can use to maximize potential in themselves and others. Whether you're

coaching soccer or teaching a child to play the piano, writing a novel or trying to improve your golf swing, this revolutionary book shows you how to grow talent by tapping into a newly discovered brain mechanism. Drawing on cutting-edge neurology and firsthand research gathered on journeys to nine of the world's talent hotbeds-from the baseball fields of the Caribbean to a classical-music academy in upstate New York-Coyle identifies the three key elements that will allow you to develop your gifts and optimize your performance in sports, art, music, math, or just about anything. • Deep Practice Everyone knows that practice is a key to success. What everyone doesn't know is that specific kinds of practice can increase skill up to ten times faster than conventional practice. • Ignition We all need a little motivation to get started. But what separates truly high achievers from the rest of the pack? A higher level of commitment—call it passion—born out of our deepest unconscious desires and triggered by certain primal cues. Understanding how these signals work can help you ignite passion and catalyze skill development. • Master Coaching What are the secrets of the world's most effective teachers, trainers, and coaches? Discover the four virtues that enable these "talent whisperers" to fuel passion, inspire deep practice, and bring out the best in their students. These three elements work together within your brain to form myelin, a microscopic neural substance that adds vast amounts of speed and accuracy to your movements and thoughts. Scientists have discovered that myelin might just be the holy grail: the foundation of

all forms of greatness, from Michelangelo's to Michael Jordan's. The good news about myelin is that it isn't fixed at birth; to the contrary, it grows, and like anything that grows, it can be cultivated and nourished. Combining revelatory analysis with illuminating examples of regular people who have achieved greatness, this book will not only change the way you think about talent, but equip you to reach your own highest potential.

Understanding Music with AI Mira Balaban, Kemal Ebcioglu, Otto Ernst Laske, 1992 This anthology provides an informative and timely introduction to ongoing research on music as a cognitive process, bringing a new coherence to the emerging science of musical activity. Following the foreword, which is based on a conversation with Marvin Minsky, 26 contributions explore musical composition, analysis, performance, perception, and learning and tutoring. Their goal is to discover how these activities can be interpreted, understood, modeled, and supported through the use of computer programs. Each

chapter is put into perspective by the editors, and empirical investigations are framed by a discussion of the nature of cognitive musicology and of epistemological problems of modeling musical action. The contributions, drawn from two international workshops on AI and Music held in 1988 and 1989, are grouped in seven sections. Topics in these sections take up two views of the nature of cognitive musicology (Kugel, Laske), principles of modeling musical activity (Balaban, Bel, Blevis, Glasgow and Jenkins, Courtot, Smoliar), approaches to music composition (Ames and Domino, Laske, Marsella, Riecken), music analysis by synthesis (Cope, Ebcioglu, Maxwell), realtime performance of music (Bel and Kippen, Ohteru and Hashimoto), music perception (Desain and Honing, Jones, Miller and Scarborough, Linster), and learning/tutoring (Baker, Widmer).
