Resource Allocation Problems Toshihide Ibaraki, Naoki Katoh, 1988 This book addresses a theoretical problem encountered in a variety of areas in operations research and management science, including load distribution, production planning, computer scheduling, portfolio selection, and apportionment. It is a timely and comprehensive summary of the past thirty years of research on algorithmic aspects of the resource allocation problem and its variants, covering Lagrangean multiplier method, dynamic programming, greedy algorithms, and their generalizations. Modern data structures are used to analyze the computational complexity of each algorithm. The resource allocation problem the authors take up is an optimization problem with a single simple constraint: it determines the allocation of a fixed amount of resources to a given number of activities in order to achieve the most effective results. It may be viewed as a special case of the nonlinear programming or nonlinear integer programming problem. Contents: Introduction. Resource Allocation with Continuous Variables. Resource Allocation with Integer Variables. Minimizing a Convex Separable Function. Minimax and Maximin Resource Allocation Problems. Fair Resource Allocation Problem. Apportionment Problem. Fundamentals of Submodular Systems. Resource Allocation Problems under Submodular Constraints. Further Topics on Resource Allocation Problems. Appendixes: Algorithms and Complexity. NP-completeness and NP-hardness. Toshihide Ibaraki is Professor in the Department of Applied

Mathematics and Physics at Kyoto University and Naoki Katoh is Associate Professor in the Department of Management Science at Kobe University of Commerce. Resource Allocation Problems is included in the Foundations of Computing Series edited by Michael Garey and Albert Meyer.

The Astro Boy Essays Frederik L. Schodt, 2007-07-01  
The pioneering genius of Japan's "God of Comics," Osamu Tezuka (1928-89), is examined through his life's masterwork: Tetsuwan Atomu, also known as Mighty Atom or Astro Boy, a comic series featuring a cute little android who yearns to be more human. The history of Tetsuwan Atomu and Tezuka's role in it is a road map to understanding the development of new media in Japan and the United States. Topics include Tezuka's life, the art of animation, the connection between fantasy robots and technology, spin-offs, and Astro Boy's cultural impact. Frederik L. Schodt is a translator and author of numerous books about Japan, including *Manga! Manga!* and *Dreamland Japan*. He often served as Osamu Tezuka's English interpreter. In 2009 he was received the The Order of the Rising Sun, Gold Rays with Rosette for his contribution to the introduction and promotion of Japanese contemporary popular culture.

*Emerging Worlds of Anime and Manga* Frenchy Lunning, 2006 This inaugural volume on anime and manga engages the rise of Japanese popular culture through game design, fashion, graphic design, commercial packaging, character creation, and fan culture. Promoting dynamic ways of thinking, along with a wealth of images, this cutting-edge work opens new doors between academia and fandom.

*Society 5.0* Hitachi-UTokyo Laboratory(H-UTokyo Lab.),2020-05-29 This open access book introduces readers to the vision on future cities and urban lives in connection with “Society 5.0”, which was proposed in the 5th Basic Science and Technology Plan by Japan’s national government for a technology-based, human-centered society, emerging from the fourth industrial revolution. The respective chapters summarize the findings and suggestions of joint research projects conducted by H-UTokyo Lab. Through the research collaboration and discussion, this book explores the future urban lives under the concept of “Society 5.0”, characterized by the key phrases of data-driven society, knowledge-intensive society, and non-monetary society, and suggests the directionality to which the concept should aim as Japan’s technology-led national vision. Written by Hitachi’s researchers as well as academics from a wide range of fields, including engineering, economics, psychology and philosophy at The University of Tokyo, the book is a must read for members of the general public interested in urban planning, students, professionals and researchers in engineering and economics.

*Materials for Optoelectronics* Maurice Quillec,1996-01-31 Optoelectronics ranks one of the highest increasing rates among the different industrial branches. This activity is closely related to devices which are themselves extremely dependent on materials. Indeed, the history of optoelectronic devices has been following closely that of the materials. KLUWER Academic Publishers has thus rightly identified Materials for Optoelectronics as a good opportunity for a book in the series entitled Electronic Materials; Science and Technology. Although a sound background in solid state physics is recommended, the authors have confined their

contribution to a graduate student level, and tried to define any concept they use, to render the book as a whole as self-consistent as possible. In the first section the basic aspects are developed. Here, three chapters consider semiconductor materials for optoelectronics under various aspects. Prof. G. E. Stillman begins with an introduction to the field from the point of view of the optoelectronic market. Then he describes how III-V materials, especially the Multi Quantum Structures meet the requirements of optoelectronic functions, including the support of microelectronics for optoelectronic integrated circuits. In chapter 2, Prof.

*Hollywood Flatlands* Esther Leslie, 2020-05-05 With ruminations on drawing, colour and caricature, on the political meaning of fairy-tales, talking animals and human beings as machines, *Hollywood Flatlands* brings to light the links between animation, avant-garde art and modernist criticism. Focusing on the work of aesthetic and political revolutionaries of the inter-war period, Esther Leslie reveals how the animation of commodities can be studied as a journey into modernity in cinema. She looks afresh at the links between the Soviet Constructivists and the Bauhaus, for instance, and those between Walter Benjamin and cinematic abstraction. She also provides new interpretations of the writings of Siegfried Kracauer on animation, shows how Theodor Adorno's and Max Horkheimer's film viewing affected their intellectual development, and reconsiders Sergei Eisenstein's famous handshake with Mickey Mouse at Disney's Hyperion

Studios in 1930.

Coasts and Estuaries Eric Wolanski, John W. Day, Mike Elliott, Ramachandran Ramesh, 2019-01-24 Coasts and Estuaries: The Future provides valuable information on how we can protect and maintain natural ecological structures while also allowing estuaries to deliver services that produce societal goods and benefits. These issues are addressed through chapters detailing case studies from estuaries and coastal waters worldwide, presenting a full range of natural variability and human pressures. Following this, a series of chapters written by scientific leaders worldwide synthesizes the problems and offers solutions for specific issues graded within the framework of the socio-economic-environmental mosaic. These include fisheries, climate change, coastal megacities, evolving human-nature interactions, remediation measures, and integrated coastal management. The problems faced by half of the world living near coasts are truly a worldwide challenge as well as an opportunity for scientists to study commonalities and differences and provide solutions. This book is centered around the proposed DAPSI(W)R(M) framework, where drivers of basic human needs requires activities that each produce pressures. The pressures are mechanisms of state change on the natural system and Impacts on societal welfare (including well-being). These problems then require responses, which are the solutions relating to governance, socio-economic and cultural measures (Scharin et al 2016). Covers estuaries and coastal seas worldwide, integrating their commonality, differences and solutions for sustainability Includes global case studies from leading worldwide contributors, with accompanying boxes highlighting a synopsis about a particular estuary and coastal sea, making all information easy to find Presents full color images to aid the reader in

a better understanding of details of each case study  
Provides a multi-disciplinary approach, linking biology,  
physics, climate and social sciences

of game theory to economic theory.

**Estuarine Ecohydrology** Eric Wolanski, 2007-09-12  
Estuarine Ecohydrology focuses on the principal  
components of an estuary. The book demonstrates how one  
can quantify an estuarine ecosystem's ability to cope with  
human stresses. The theories, models, and real-world  
solutions covered will serve as a toolkit for designing a  
management plan for the ecologically sustainable  
development of an estuary. This book is organized into  
seven chapters dealing with topics such as estuarine water  
circulation; estuarine sediment dynamics; tidal wetlands;  
estuarine food webs; and ecohydrology models and  
solutions. Although each chapter contains rigorous  
specialist knowledge, it is presented in an accessible way  
that encourages multi-disciplinary collaboration between  
such fields as hydrology, ecology and mathematical  
modeling. Estuarine Ecohydrology is appropriate for use as  
a textbook and as a reference for researchers; advanced  
undergraduate and graduate students in marine biology,  
oceanography, coastal management, and coastal  
engineering; coastal developers; resources managers,  
shipping operators; and those involved in estuarine  
fisheries and sustainable development communities. \*

**Coastal Acoustic Tomography** Arata Kaneko, Xiao-

Hua Zhu, Ju Lin, 2020-02-05 Coastal Acoustic Tomography begins with the specifics required for designing a Coastal Acoustic Tomography (CAT) experiment and operating the CAT system in coastal seas. Following sections discuss the procedure for data analyses and various application examples of CAT to coastal/shallow seas (obtained in various locations). These sections are broken down into four kinds of methods: horizontal-slice inversion, vertical-slice inversion, modal expansion method and data assimilation. This book emphasizes how dynamic phenomena occurring in coastal/shallow seas can be analyzed using the standard method of inversion and data assimilation. The book is relevant for physical oceanographers, ocean environmentalists and ocean dynamists, focusing on the event being observed rather than the intrinsic details of observational processes. Application examples of successful dynamic phenomena measured by coastal acoustic tomography are also included. Provides the information needed for researchers and graduate students in physical oceanography, ocean-fluid dynamics and ocean environments to apply Ocean Acoustic Tomography (OAT) to their own fields Presents the benefits of using acoustic tomography, including less disturbance to aquatic environments vs. other monitoring methods Includes the assimilation of CAT data into a coastal sea circulation model, a powerful tool to predict coastal-sea environmental changes

**Birth and Present** Yoshitomo Nara, 2003 Artist  
Yoshitomo Nara's work has received unprecedented international recognition in recent years and has been presented in many publications, yet none have offered such an intimate portrait of the artist and his process. Photographer Mie Morimoto worked with Nara for six months to document the developinf nuance and texture of his art, including his signature enfant terribles paintings and weeping dog sculptures. The book includes never before published excerpts from Nara's Journals and revelatory photographs documenting the body of work included in the travelling exhibition I Don't Mind If You Forget Me.

Nothing Ever Happens Yoshitomo Nara, 2003 Edited by Larry Gilman. Foreword by Jill Snyder. Text by Kristin Chambers, Josh Kun, Ingrid Schaffner, Billie Joe Armstrong, Carrie Brownstein, John Doe, Dave Eggers, Yoshitomo Nara, Lars Frederickson, Debbie Harry, Leonard Nimoy, Ozmatli.

Yoshitomo Nara Yoshitomo Nara, 2015 Shallow Puddles brims with full-color, detailed images of Yoshitomo Nara's (born 1959) titular series. These paintings are executed on shallow circular dishes, covered with small square patches of canvas, and seemingly create portals to a world inundated with water. Depicted on each is a solitary figure that, like those in many of the artist's iconic paintings, holds the viewer's gaze with its large, full eyes, some even with averted eyes. Ground and figure are the main components of each work, yet the artist's painterly execution calls attention to his manipulation of color, form and composition to create an image that transcends traditional portraiture. Included is an essay by Shigemi

Takahashi, curator at Aomori Museum of Art, who has worked closely with the artist on numerous projects.
