Basic Economics Thomas Sowell,2000 From one of America's best-known economists, the one book anyone who wants to understand the economy needs to read.

Econometric Model Selection Antonio Aznar Grasa,2013-03-09 This book proposes a new methodology for the selection of one (model) from among a set of alternative econometric models. Let us recall that a model is an abstract representation of reality which brings out what is relevant to a particular economic issue. An econometric model is also an analytical characterization of the joint probability distribution of some random variables of interest, which yields some information on how the actual economy works. This information will be useful only if it is accurate and precise; that is, the information must be far from ambiguous and close to what we observe in the real world Thus, model selection should be performed on the basis of statistics which summarize the degree of accuracy and precision of each model. A model is accurate if it predicts right; it is precise if it produces tight confidence intervals. A first general approach to model selection includes those procedures based on both characteristics, precision and accuracy. A particularly interesting example of this approach is that of Hildebrand, Laing and Rosenthal (1980). See also Hendry and Richard (1982). A second general approach includes those procedures that use only one of the two dimensions to discriminate among models. In general, most of the tests we are going to examine correspond to this category.

Warhol-isms Andy Warhol,2022-05-10 A unique collection of brilliant quotations from the legendary Pop artist One of the most influential artists of his time and ours, Andy Warhol is nearly as renowned for what he said as for what he did. Indeed, he is so quotable that things he never said are endlessly and plausibly attributed to him, including, fittingly, the most celebrated fake Warhol saying—"In the future, everyone will be world-famous for 15 minutes." Warhol-isms separates legend from fact to present a unique and comprehensive collection of authentic quotations from the Pop artist. Gathered from interviews and other primary sources, these deadpan, droll, ironic, and sincere gems—in which a superficial embrace of superficiality often disguises provocative, unconventional ideas—provide compelling insights into the life and work of an artist who has left an indelible mark on art and popular culture. Select quotations from the book: I think an artist is anybody who does something well.I went to [a psychiatrist] once, and he never called me back.They always say that time changes things, but you actually have to change them yourself.I've never met a person I couldn't call a beauty.New things are always better than old things.I'm still a commercial artist. I was always a commercial artist.

Does Insurance Market Activity Promote Economic Growth? Marco Arena,2006 Abstract: Insurance market activity, both as a financial intermediary and a provider of risk transfer and indemnification, may contribute to economic growth by allowing different risks to be managed more efficiently and by mobilizing domestic savings. During the past decade, there has been faster growth in insurance market activity, particularly in emerging markets given the process of liberalization and financial integration, which raises questions about its impact on economic growth. The author tests whether there is a causal relationship between insurance market activity (life and nonlife insurance) and economic growth. Using the generalized method of moments for dynamic models of panel data for 56 countries and for the 1976-2004 period, he finds robust evidence of a causal relationship between insurance market activity and economic growth. Both life and nonlife insurance have a positive and significant causal effect on economic growth. High-income countries drive the results in the case of life insurance. On the other hand, both high-income and developing countries drive the results in the case of nonlife insurance.

2015 11th International Conference on Design of Reliable Communication Networks (DRCN) ,

The Limits of Convergence Mauro F. Guillén,2010-07-01 This book challenges the widely accepted notion that globalization encourages economic convergence--and, by extension, cultural

homogenization--across national borders. A systematic comparison of organizational change in Argentina, South Korea, and Spain since 1950 finds that global competition forces countries to exploit their distinctive strengths, resulting in unique development trajectories. Analyzing the social, political, and economic conditions underpinning the rise of various organizational forms, Guillén shows that business groups, small enterprises, and foreign multinationals play different economic roles depending on a country's path to development. Business groups thrive when there is foreign-trade and investment protectionism and are best suited to undertake large-scale, capital-intensive activities such as automobile assembly and construction. Their growth and diversification come at the expense of smaller firms and foreign multinationals. In contrast, small and medium enterprises are best fitted to compete in knowledge-intensive activities such as component manufacturing and branded consumer goods. They prosper in the absence of restrictions on export-oriented multinationals. The book ends on an optimistic note by presenting evidence that it is possible--though not easy--for countries to break through the glass ceiling separating poor from rich. It concludes that globalization encourages economic diversity and that democracy is the form of government best suited to deal with globalization's contingencies. Against those who contend that the transition to markets must come before the transition to ballots, Guillén argues that democratization can and should precede economic modernization. This is applied economic sociology at its best--broad, topical, full of interesting political implications, and critical of the conventional wisdom.

Diversification in Indian Agriculture towards High-Value Crops P. S. BIRTHAL, P. K. JOSHI, DEVESH ROY, and AMIT THORAT,2007

Forecasting the Price of Gold B. A. Goss,David E. A. Giles,1981

Agriculture and National Welfare Around the World Claudio Bravo-Ortega,Daniel Lederman,2014 Calculations of marginal welfare effects suggest that agricultural development has had important positive effects on national welfare, especially in developing countries. Latin American and Caribbean countries have also benefited from agricultural growth, but nonagricultural production has had marginal welfare effects that are greater in magnitude than those provided by agricultural activities. In contrast, the industrialized, high-income countries experienced marginal welfare gains from nonagricultural activities that are much greater than those derived from agriculture, whose impact is actually negative. These calculations of marginal welfare effects across regions depend on econometric estimates of elasticities linking agricultural and nonagricultural economic activities to four elements in a national welfare function: National GDP per capita, average income of the poorest households within countries, environmental outcomes concerning air and water pollution and deforestation, and macroeconomic volatility. The econometric analyses are motivated by theoretical treatments of key issues. The empirical models are estimated with various econometric techniques that deal with issues of causality and international heterogeneity. This paper - a product of the Office of the Chief Economist, Latin America and the Caribbean Region - is part of a larger effort in the region to study the rural contribution to development.

Global Trade in Services J. Bradford Jensen,2011 He finds that, in spite of US comparative advantage in service activities, service firms' export participation lags manufacturing firms. Jensen evaluates the impediments to services trade and finds evidence that there is considerable room for liberalization-especially among the large, fast-growing developing economies. The policy recommendations coming out of this path-breaking study are quite clear. The United States should not fear trade in services. It should be pushing aggressively for services trade liberalization. Because other advanced economies have similar comparative advantage in service, the United States should make common cause with the European Union and other advanced economies to encourage the large, fast-growing developing economies to liberalize their service sectors through multilateral negotiations in the General Agreement on Trade in Services and the Government Procurement Agreement.
