Power-Sharing Executives Joanne McEvoy,2015 To achieve peaceful interethnic relations and a stable democracy in the aftermath of violent conflict, institutional designers may task political elites representing previously warring sides with governing a nation together. In *Power-Sharing Executives*, Joanne McEvoy asks whether certain institutional rules can promote cooperation between political parties representing the contending groups in a deeply divided place. Examining the different experiences of postconflict power sharing in Bosnia, Macedonia, and Northern Ireland, she finds that with certain incentives and norms in place, power sharing can indeed provide political space for an atmosphere of joint governance or accommodation between groups. *Power-Sharing Executives* explains how the institutional design process originated and evolved in each of the three nations and investigates the impact of institutional rules on interethnic cooperation. McEvoy also looks at the role of external actors such as international organizations in persuading political elites to agree to share power and to implement power-sharing peace agreements. This comparative analysis of institutional formation and outcomes shows how coalitions of varying inclusivity or with different rules can bring about a successful if delicate consociationality in practice. *Power-Sharing Executives* offers prescriptions for policymakers facing the challenges of mediating peace in a postconflict society and sheds light on the wider study of peace promotion.

Microfinance, Debt and Over-Indebtedness Isabelle Guérin,Solène Morvant-Roux,Magdalena Villarreal,2013-10-15 Although microcredit programmes have long been considered efficient development tools, many forms of debt-induced distress have emerged in their wake. This has brought to light the problem of over-indebtedness, a topic which has been previously underexplored in the literature. This new book, from a group of leading scholars, explores the manifestations, scale, and economic and social implications of household over-indebtedness in areas conventionally considered as financially excluded. The book approaches debt not only as a financial transaction, but also as a form of social bond, and offers a socioeconomic analysis of over-indebtedness. The volume puts forward a broad definition of over-indebtedness, highlighting its situational and semantic complexity and diversity. It provides a close analysis of local conceptions of debt and over-indebtedness, highlighting frameworks of calculation and the constant renegotiation of their boundaries. On top of this, it looks far beyond microcredit to examine all the financial practices that individuals juggle. The volume argues that over-indebtedness has more to do with social inequalities than financial illiteracy, and should therefore be understood in the light of global trends of financialization. It also reveals the ambiguity of financial inclusion policies, and in many respects questions the actions of new credit providers. This book will be valuable reading for students, researchers and policy makers interested in microfinance and development issues.

Water Sheng Meng,Enge Wang,2023-06-19 This book highlights the fundamentals for understanding the essential problems and latest progresses in basic water science. Water is the most abundant, fundamental and important matter in nature. Arguably it is also the material that human beings study the most but misunderstand the most. Compared with the environmental science and engineering research activities on water resources, water pollution and water usage closely related to social problems at the macro level, basic scientific research on water at the molecular level has just emerged, the impact of which is not fully recognized yet. This book is devoted to introducing some important advances in the field of basic water science in past decades, with a particular emphasis on recent results on water and the interactions between water and solid surfaces at the molecular level. Starting from introducing concepts and popular theoretical and experimental methods for basic water research, this book mainly focuses on the atomic composition, electronic structure, and physicochemical properties of water molecules, water clusters and water layers (including surface water layers and water surface layers), rules for water adsorption on metals, oxides, and other typical solid surfaces such as salt, as well as the microscopic processes and mechanisms of water diffusion, wetting, decomposition and phase transformations under a variety of conditions. It is a good reference book for students and researchers in water-related science.

The Science and Engineering of Materials Donald R. Askeland,Frank Haddleton,Phil Green,Howard Robertson,2013-11-11 *The Science and Engineering of Materials*, Third Edition, continues the general theme of the earlier editions in providing an understanding of the relationship between structure, processing, and properties of materials. This text is intended for use by students of engineering rather than materials, at first degree level who have completed prerequisites in chemistry, physics, and mathematics. The author assumes these students will have had little or no exposure to engineering sciences such as statics, dynamics, and mechanics. The material presented here admittedly cannot and should not be covered in a one-semester course. By selecting the appropriate topics, however, the instructor can emphasise metals, provide a general overview of materials, concentrate on mechanical behaviour, or focus on physical properties. Additionally, the text provides the student with a useful reference for accompanying courses in manufacturing, design, or materials selection. In an introductory, survey text such as this, complex and comprehensive design problems cannot be realistically introduced because materials design and selection rely on many factors that come later in the student's curriculum. To introduce the student to elements of design, however, more than 100 examples dealing with materials selection and design considerations are included in this edition.

Basic Semiconductor Physics Chihiro Hamaguchi,2013-04-17 A detailed description of the basic physics of semiconductors. All the important equations describing the properties of these materials are derived without the help of other textbooks. Lapiga,2007-09-24 This highly detailed reference represents an elaborate development of the theory of processing oil and natural gas and its application in the field -- indispensable for graduate engineering students and professionals alike. The renowned expert author, a professor at Moscow State University, has ample experience in both lecturing and publishing, albeit in the Russian language. This book is thus the first to provide a translation compiling his extensive knowledge, much of which remained unpublished due to security restrictions in the former Soviet Union. Based upon and compiled from Professor Sinaiski's university lectures, the first chapters treat the technical facilities for preparing and processing natural hydrocarbon substances. The following systematic approach goes on to explain the behaviors of fluids, gases and droplets separately for solutions, suspensions and emulsions, as well as for gas-liquid mixtures. The resulting work is of interest both for senior students as well as for engineers working in this field.
