Natural Hazards and Disaster Justice Anna Lukasiewicz,Claudia Baldwin,2020-01-24 This book explores policy, legal, and practice implications regarding the emerging field of disaster justice, using case studies of floods, bushfires, heatwaves, and earthquakes in Australia and Southern and South-east Asia. It reveals geographic locational and social disadvantage and structural inequities that lead to increased risk and vulnerability to disaster, and which impact ability to recover post-disaster. Written by multidisciplinary disaster researchers, the book addresses all stages of the disaster management cycle, demonstrating or recommending just approaches to preparation, response and recovery. It notably reveals how procedural, distributional and interactional aspects of justice enhance resilience, and offers a cutting edge analysis of disaster justice for managers, policy makers, researchers in justice, climate change or emergency management.

Planning, Development and Management of Sustainable Cities Tan Yigitcanlar,Md. (Liton) Kamruzzaman,2019-04-30 The concept of ‘sustainable urban development’ has been pushed to the forefront of policymaking and politics as the world wakes up to the impacts of climate change and the destructive effects of the Anthropocene. Climate change has emerged to be one of the biggest challenges faced by our planet today, threatening both built and natural systems with long-term consequences, which may be irreversible. While there is a vast body of literature on sustainability and sustainable urban development, there is currently limited focus on how to cohesively bring together the vital issues of the planning, development, and management of sustainable cities. Moreover, it has been widely stated that current practices and lifestyles cannot

continue if we are to leave a healthy living planet to not only the next generation, but also to the generations beyond. The current global school strikes for climate action (known as Fridays for Future) evidences this. The book advocates the view that the focus needs to rest on ways in which our cities and industries can become green enough to avoid urban ecocide. This book fills a gap in the literature by bringing together issues related to the planning, development, and management of cities and focusing on a triple-bottom-line approach to sustainability.

Sea Change I. H. Burnley, Peter Murphy, 2004 Sea Change is about population 'turnaround'. U.S. Emergency Management in the 21st Century Claire B. Rubin, Susan L. Cutter, 2019-12-06 U.S. Emergency Management in the 21st Century: From Disaster to Catastrophe explores a critical issue in American public policy: Are the current public sector emergency management systems sufficient to handle future disasters given the environmental and social changes underway? In this timely book, Claire B. Rubin and Susan L. Cutter focus on disaster recovery efforts, community resilience, and public policy issues of related to recent disasters and what they portend for the future. Beginning with the external societal forces influencing shifts in policy and practice, the next six chapters provide in-depth accounts of recent disasters— the Joplin, Tuscaloosa-Birmingham, and Moore tornadoes, Hurricanes Sandy, Harvey, Irma, Maria, and the California wildfires. The book concludes with a chapter on loss accounting and a summary chapter on what has gone right, what has gone wrong, and why the federal government may no longer be a reliable partner in emergency management. Accessible and clearly written by authorities in a wide-range of related fields with local experiences, this book offers a rich array of case studies and describes their significance in shifting emergency management policy and practice, in the United States during the past decade. Through a careful blending of contextual analysis and practical information, this book is essential reading for students, an interested public, and professionals alike.

Strengthening Disaster Risk Governance to Manage Disaster Risk Jose Manuel Mendes, Gretchen Kalonji, Rohit Jigyasu, Alice Chang-Richards, 2021-01-11 Strengthening Disaster Risk Governance to Manage Disaster Risk presents the second principle from the UNISDR Sendai Framework for Disaster Risk Reduction, 2015-2030. Resilient Sustainable Cities Leonie Pearson, Peter Newton, Peter Roberts, 2014-01-10 Urbanization is occurring at an unprecedented rate; by 2050 three quarters of the world's people will live in urban environments. The cars we drive, products we consume, houses we live in and technology we use will all determine how sustainable our cities will be. Bridging the increasing divide between cross-disciplinary academic insights and the latest practical innovations, Resilient Sustainable Cities provides an integrated approach for long term future planning within the context of the city as a whole system. In the next 30 years cities will face their biggest challenges yet, as a result of long term, or 'slow burn' issues: population growth will stretch to the breaking point urban infrastructure and service capacity; resource scarcity, such as peak oil; potable water and food security, will dramatically change what we consume and how; environmental pressures will change how we live and where and; shifting demographic preferences will exacerbate urban pressures. Cities can't keep doing what they've always done and cope - we need to change current urban development to achieve resilient, sustainable cities. Resilient Sustainable Cities provides practical and conceptual insights for practitioners, researchers and students on how to deliver cities which are resilient to 'slow burn' issues and achieve sustainability. The book is organized around three overarching themes: pathways to the future innovation to deliver the future leadership and governance issues The book includes a variety of perspectives conveyed through international case studies and examples of cities that have transformed for a sustainable future, exploring their successes and failures to ensure that readers are left with ideas on how to turn their city into a resilient sustainable city for the future.

Development and Structure of Prometheus Cordy Tymstra, 2009 Accurate, high-resolution fire behavior prediction is a critical component of fire management decision-making before and during fires. Prometheus is a deterministic fire growth simulation model that was developed to help fire managers to understand the probable consequences of their decisions. It uses spatial input data on topography (slope, aspect, and elevation), fuel types, and weather to simulate fire growth by applying Huygens principle of wave propagation to the rate-of-spread predictions from the Canadian Forest Fire Behavior Prediction System of the Canadian Forest Fire Danger Rating System. This approach produces detailed fire perimeters at user-specified display time step intervals. Each active vertex along the perimeter has corresponding fire behavior output. Exported fire perimeters are compatible with geographic information systems. Additionally, three interpolation techniques are available to produce optional raster fire behavior outputs. This report documents the structure of the Prometheus model and an assessment of its performance. The report includes a general discussion of approaches to the modeling of fire growth simulation and explains the vector propagation technique used in Prometheus. The limitations and assumptions of applying the model, as well as the most appropriate directions for future research, are also discussed.

Analyzing the Social Web Jennifer Golbeck, 2013-02-17 Analyzing the Social Web provides a framework for the analysis of public data currently available and being generated by social networks and social media, like Facebook, Twitter, and Foursquare. Access and analysis of this public data about people and their connections to one another allows for new applications of traditional social network analysis techniques that let us identify things like who are the most important or influential people in a network, how things will spread through the network, and the nature of peoples' relationships. Analyzing the Social Web introduces you to these techniques, shows you their application to many different types of social media, and discusses how social media can be used as a tool for interacting with the online public. Presents interactive social applications on the web, and the

types of analysis that are currently conducted in the study of social media Covers the basics of network structures for beginners, including measuring methods for describing nodes, edges, and parts of the network Discusses the major categories of social media applications or phenomena and shows how the techniques presented can be applied to analyze and understand the underlying data Provides an introduction to information visualization, particularly network visualization techniques, and methods for using them to identify interesting features in a network, generate hypotheses for analysis, and recognize patterns of behavior Includes a supporting website with lecture slides, exercises, and downloadable social network data sets that can be used can be used to apply the techniques presented in the book

Fire, the Australian Experience ,200? Fire on Earth in the form of volcanic activity pre-existed vegetation. It has most likely affected the environment since the first vegetation appeared. Lightning, volcanic eruptions and maybe even sparks from rock falls would have served as ignition sources from the earliest times. Later, spontaneous ignition could have occurred in peat and coal deposits. ... Most fires today are caused by people, either deliberately or accidentally. However, many of these fires are quite small. The largest fires which burn the widest areas are started by lightning, but the most devastating fires are caused by people. The influence of both climate and fire on the evolving vegetation can be traced by looking at the palasoecological evidence collected at a range of sites across Australia.--The website.
