Hunger N S Nash, 2023-11-01 Throughout the ages, more combatants and civilians have died in war of the effects of starvation and resulting disease than have been killed by bullet or bomb. The author of this fascinating work argues that, over the last 160 years, conflicts have been decided not just on the battlefield but by the denial of an adversary's access to food. The starvation that followed led to military indiscipline, social unrest, and a

failure of governance. Numerous examples prove his point, not least Germany in 1919. The Union blockade of the Confederacy in 1861 was a major factor in the outcome of the Civil War as was the American strategy against Japan in 1943-1945. The fates of besieged forces both at Vicksburg in 1863 and the British at Kut in 1916 were sealed when control of their respective supply routes was lost. Churchill's fears over Hitler's U-boat campaign were well justified. "Logistics" is a modern word, but it describes a fundamental element of generalship, amply demonstrated at Metz in 1870 when logistic illiteracy resulted in a vast and hitherto undefeated French army having no option but to surrender. This thought-provoking book vividly demonstrates that extreme hunger is the precursor to starvation and, consequently, almost inevitable defeat. It proves that deprivation of food is a potent weapon that no commander can ignore.

The Implicit Genome Lynn Helena Caporale, 2006-02-02 In its beautiful simplicity, the double-helical structure of DNA had entranced us into believing that we can fully understand the information content of a DNA sequence, simply by treating it as text that is read in a linear fashion. While we have learned much based on this assumption, there is much we have missed. Far from a passive tape running through a reader, genomes contain information that appears in new forms which create regions with distinct behavior. The chapters in this volume touch on one or more of three interconnected themes; information can be implied, rather than explicit, in a genome; information can lead to focused and/or regulated changes in nucleotide sequences; information that affects the probability of distinct classes of mutation has implications for evolutionary theory.

The Epic Battles for Ticonderoga, 1758 William R. Nester, 2008-02-13 On July 8, 1758, British General James Abercromby ordered a controversial frontal assault of the French defenses on the Ticonderoga peninsula in upstate New York. Outnumbering the French by four to one, the capture of their fort, named Carillon, seemed all but assured. Once the fort—called the key to a

continent—was in British hands the road would be open to invade Canada, capture Montreal and Quebec, and end the French and Indian War. The attack, however, would go horribly wrong and result in nearly 2,000 British casualties, the single bloodiest day of the entire war. It would be another year before the British, under a different commander, would capture the fortifications and rename them Fort Ticonderoga. The Epic Battles for Ticonderoga, 1758 examines the skirmishes and raids in the months leading up to the battle, discusses Abercromby's campaign in the larger context of British grand strategy for the year 1758, the roles of key military and political figures on both sides, and the conflict's aftermath.

Boulay,2009-06-25 This publication covers papers presented at AIED2009, part of an ongoing series of biennial international conferences for top quality research in intelligent systems and cognitive science for educational computing applications. The conference provides opportunities for the cross-fertilization of techniques from many fields that make up this interdisciplinary research area, including: artificial intelligence, computer science, cognitive and learning sciences, education, educational technology, psychology, philosophy, sociology, anthropology, linguistics, and the many domain-specific areas for which AIED systems have been designed and evaluated. AIED2009 focuses on the theme Building learning systems that care: from knowledge representation to affective modelling. The key research question is how to tackle the complex issues related to building learning systems that care, ranging from representing knowledge and context to modelling social, cognitive, metacognitive, and affective dimensions. This requires multidisciplinary research that links theory and technology from artificial intelligence, cognitive science, and computer science with theory and practice from education and the social sciences.

Building the Great Society Joshua Zeitz,2018-01-30 The author of Lincoln's Boys takes us inside Lyndon Johnson's White House to show how the legendary Great Society programs were actually put into practice: Team of Rivals for LBJ. The personalities behind every burst of 1960s liberal reform - from civil rights and immigration reform, to Medicare and Head Start. Absorbing, and astoundingly well-researched -- all good historians do their homework, but Zeitz goes above and beyond. It's a more than worthwhile addition to the canon of books about Johnson.--NPR Beautifully written...a riveting portrait of LBJ... Every officeholder in Washington would profit from reading this book. --Robert Dallek, Author of An Unfinished Life: John F. Kennedy, 1917-1963 and Franklin D. Roosevelt: A Political Life LBJ's towering political skills and his ambitious slate of liberal legislation are the stuff of legend: the Civil Rights Act of 1964, the Voting Rights Act of 1965, Medicare, Medicaid, Head Start, and environmental reform. But what happened after the bills passed? One man could not and did not go it alone. Joshua Zeitz reanimates the creative and contentious atmosphere inside Johnson's White House as a talented and energetic group of advisers made LBJ's vision a reality. They desegregated public and private institutions throughout one third of the United States; built Medicare and Medicaid from the ground up in one year; launched federal funding for public education; provided food support for millions of poor children and adults; and launched public television and radio, all in the space of five years, even as Vietnam strained the administration's credibility and budget. Bill Moyers, Jack Valenti, Joe Califano, Harry McPherson and the other staff members who comprised LBJ's inner circle were men as pragmatic and ambitious as Johnson, equally skilled in the art of accumulating power or throwing a sharp elbow. Building the Great Society is the story of how one of the most competent White House staffs in American history - serving one of the most complicated presidents ever to occupy the Oval Office - fundamentally changed everyday life for millions of citizens and forged a legacy of compassionate and interventionist government.
