Audio Recorders to Zucchini Seeds Mark Robison, Lindley Shedd, 2017-05-30 This exploration of the range of options for a library of things collection demonstrates what has been implemented successfully and offers practical insights regarding these nontraditional projects, from the development of concepts to the everyday realities of maintaining these collections. What services libraries provide and how they function in their communities is constantly being reconsidered and

redefined. One example of this is the trend of experimenting with building circulating collections of nonliterary things—such as tools, seeds, cooking equipment, bicycles, household machinery, and educational materials—by drawing on traditional library functions and strengths of acquisition, organization, and circulation. *Audio Recorders to Zucchini Seeds: Building a Library of Things* enables you to consider the feasibility of creating a specific type of thing collection in your library and get practical advice about the processes necessary to successfully launch and maintain it, from planning and funding to circulation, promotion, and upkeep. This contributed volume provides a survey of library of things projects within the United States, from both public and academic libraries, offering real-world lessons learned from these early experiments with nontraditional collections. The authors offer practical insights from their projects, from the development of their initial ideas to the everyday realities of maintaining and circulating these collections, including cataloging, space needs, safety concerns, staff training, circulation, marketing, and assessment. The contributed chapters are organized thematically, covering things collections that encompass a wide variety of objects first, followed by collections with a community-building focus (seeds, recreation, tools) and those that serve an educational purpose, such as curriculum centers, children's toys, or collections that support a university curriculum. The last section addresses collections that support media production.

Solving and Data Analysis, and Additional Topics in Math. Each chapter concludes with a reference list of similar questions from official practice tests. Practice questions are designated as either “Calculator” or “No calculator.” Students will be forbidden from using their calculators for one whole section of the new SAT.
