Under Construction: Logics of Urbanism in the Gulf Region Steffen Wippel,Katrin Bromber,Birgit Krawietz,2016-02-17 Interdisciplinary in approach, this volume explores and deciphers the symbolic value and iconicity of the built environment in the Arab Gulf Region, its aesthetics, language and performative characteristics. Bringing together a range of studies by artists, curators and scholars, it demonstrates how Dubai appeared - at least until the financial crisis - to be leading the construction race and has already completed a large number of its landmark architecture and strategic facilities. In contrast, cities like the Qatari capital Doha still appear to be heavily 'under construction' and in countries like the Sultanate of Oman, ultra-luxury tourism projects were started only recently. While the construction of artificial islands, theme parks and prestige sport facilities has attracted considerable attention, much less is known about the region's widespread implementation of innovative infrastructure such as global container ports, free zones, inter-island causeways and metro lines. This volume argues that these endeavours are not simply part of a strategy to prepare for the post-oil era for future economic survival and prosperity in the Lower Gulf region, but that they are also aiming to strengthen identitarian patterns and specific national brands. By doing that, the countries in the Gulf are articulating a new semiotic and paradigm of urban development. For the first time, this volume maps these trends in their relation to architecture and infrastructure, in particular by treating them as semiotics in their own right. It suggests that recent developments in this region of the world not only represen

Construction and Building Research Carmen Llinares-Millán,Igor Fernández-Plazaola,Francisco Hidalgo-Delgado,María Montserrat Martínez-Valenzuela,Francisco Javier Medina-Ramón,Inmaculada Oliver-Faubel,Isabel Rodríguez-Abad,Andrea Salandin,Rafael Sánchez-Grandia,Isabel Tort-Ausina,2014-01-31 Many areas of knowledge converge in the building industry and therefore research in this field necessarily involves an interdisciplinary approach. Effective research requires strong relation between a broad variety of scientific and technological domains and more conventional construction or craft processes, while also considering advanced management processes, where all the main actors permanently interact. This publication takes an interdisciplinary approach grouping various studies on the building industry chosen from among the works presented for the 2nd International Conference on Construction and Building Research. The papers examine aspects of materials and building systems; construction technology; energy and sustainability; construction management; heritage, refurbishment and conservation. The information contained within these pages may be of interest to researchers and practitioners in construction and building activities from the academic sphere, as well as public and private sectors.
