Judicial Decision-Making in a Globalised World Elaine Mak,2014-07-04 Why do judges study legal sources that originated outside their own national legal system, and how do they use arguments from these sources in deciding domestic cases? Based on interviews with judges, this book presents the inside story of how judges engage with international and comparative law in the highest courts of the United Kingdom, Canada, the United States, France and the Netherlands. A comparative analysis of the views and experiences of the judges clarifies how the decision-making of these Western courts has developed in light of the internationalisation of law and the increased opportunities for transnational judicial communication. While the qualitative analysis reveals the motives that judges claim for using foreign law and the influence of 'globalist' and 'localist' approaches to judging, the author also finds suggestions of a convergence of practices between the courts that are the subject of this study. This empirical analysis is complemented by a constitutional-theoretical inquiry into the procedural and substantive factors of legal evolution, which enable or constrain the development and possible convergence of highest courts' practices. The two strands of the analysis are connected in a final contextual reflection on the future development of the role of Western highest courts.

Multi-Attribute Decision Making Method Based on Aggregated Neutrosophic Set Wen Jiang,Zihan Zhang,Xinyang Deng, Multi-attribute decision-making refers to the decision-making problem of selecting the optimal alternative or sorting the scheme when considering multiple attributes, which is widely used in engineering design, economy, management and military, etc. But in real application, the attribute information of many objects is often inaccurate or uncertain, so it is very important for us to find a useful and efficient method to solve the problem.

EBOOK: Analytical Models for Decision-Making Colin Sanderson,Reinhold Gruen,2006-03-16 Health care systems are complex and, as a result, it is often unclear what the effects of changes in policy or service provision might be. At the same time, resources for health care tend to be in short supply, which means that public health practitioners have to make difficult decisions. This book describes the quantitative and qualitative methods that can help decision-makers to structure and clarify difficult problems and to explore the implications of pursuing different options. The accompanying CD ROM provides the opportunity to try out some of the proposed solutions. The book examines:

Models and decision-making in health care Methods for clarifying complex decisions Models for service planning and resource allocation Modelling for evaluating changes in systems Series Editors: Rosalind Plowman and Nicki Thorogood.

Handbook of Decision Making Goktug Morcol,2006-11-01 Over time, thought processes and decision making styles evolved and were shaped by theological, philosophical, political, social, and environmental factors and trends. Recently, advances in technology have borne an unprecedented influence on our social environment. Contemporary thinking inevitably reflects this influence and moves us from a linear,

Strategic Decisions Vassilis Papadakis,Patrick Barwise,2012-12-06 Over the past ten years, there has been growing interest in the process of strategic decision-making among both managers and researchers. Strategic decisions are important for five main reasons: They are large-scale, risky and hard to reverse; they are a bridge between deliberate and emerging strategies; they can be a major source of organizational learning; they play an important part in the development of individual managers and they cut accross functions and academic disciplines. Strategic Decisions summarizes the current state of the art in research on strategic decision-making, with chapters prepared by leading strategy researchers. The editors also present implications for current application and proposed directions for future research.

Prioritizing People in Ethical Decision-Making and Caring for Cultural Heritage Collections Nina Owczarek,2023-06-27 While historically focusing on the object, the study of ethics in conservation has expanded to consider the human aspect of conservation work. This book offers a flexible framework to guide decision-making in line with this development, offering an inclusive, compassionate approach to collections care. This edited volume contributes theories and international examples for advancing conservation practice and providing best practice for the field that centers people in conservation of cultural heritage and collections care. The first part examines the ethical theory that underpins conservation decision-making by challenging outdated norms, introducing updated methods, and demonstrating new ways to approach compassionate collections care. The second part considers the challenges of human-centered ethics in conservation practice, while the final part provides real-world examples and case studies of these best practices in action, including successful challenges to colonial authority. By presenting both theoretical and practical aspects of prioritizing people, this volume establishes the need for rethinking conservation approaches while demonstrating how to do so effectively. Combining theory and practice, *Prioritizing People in Ethical Decision-Making and Caring for Cultural Heritage Collections* is valuable reading for conservation professionals, including collections managers, conservators, curators, and registrars. It will also benefit students working in Cultural Heritage Conservation, Museum studies, and Heritage Studies, as well as those taking courses in Art History and Anthropology.

Rough Multiple Objective Decision Making Jiuping Xu,Zhimiao Tao,2011-07-28 Under intense scrutiny for the last few decades, Multiple Objective Decision Making (MODM) has been useful for dealing with the multiple-criteria decisions and planning problems associated with many important applications in fields including management science, engineering design, and transportation. Rough set theory has also proved to be an effective mathematical tool to counter the vague description of objects in fields such as artificial intelligence, expert systems, civil engineering, medical data analysis, data mining, pattern recognition, and decision theory. Rough Multiple Objective Decision Making is perhaps the first book to combine state-of-the-art application of rough set theory, rough approximation techniques, and MODM. It illustrates traditional techniques—and some that employ simulation-based intelligent algorithms—to solve a wide range of realistic problems. Application of rough theory can remedy two types of uncertainty (randomness and fuzziness) which present significant drawbacks to existing decision-making methods, so the

authors illustrate the use of rough sets to approximate the feasible set, and they explore use of rough intervals to demonstrate relative coefficients and parameters involved in bi-level MODM. The book reviews relevant literature and introduces models for both random and fuzzy rough MODM, applying proposed models and algorithms to problem solutions. Given the broad range of uses for decision making, the authors offer background and guidance for rough approximation to real-world problems, with case studies that focus on engineering applications, including construction site layout planning, water resource allocation, and resource-constrained project scheduling. The text presents a general framework of rough MODM, including basic theory, models, and algorithms, as well as a proposed methodological system and discussion of future research.

Psychology of Decision Making in Legal, Health Care and Science Settings

Gloria R. Burthold, 2007 In a fast-moving world, the necessity of making decisions, and preferably good ones, has become even more difficult. One reason is the variety and number of choices perhaps available which often are not presented or understood. Alternatives are often unclear and complex paths to them confusing and misleading. Thus the process of decision making itself requires analysis on an ongoing basis. Decision making is often made based on cultural factors whereas the best alternative might be quite different. The subject touches ethical aspects as well as psychological considerations. This book presents important research on the psychology of decision making related to law and law enforcement, health care and science.

Decision-making for New Product Development in Small Businesses Mary

Haropoulou, Clive Smallman, 2018-12-07 What goes on in a small firm that lives or dies by its capacity to innovate? How are decisions made on new product development, and how does that feed into the ecological, social and financial sustainability of the firm? This book answers the questions through an in-depth look at a small business that manufactures high-end carpet yarn. Using advanced analytical techniques to interrogate rich qualitative data, the book draws together established theories of decision-making and new product development, coupled with thinking about business sustainability to improve our understanding of this important area of business practice. The book further reinforces the importance and role of organizational learning in organizational decision-making, based on novel analysis of empirically developed qualitative data.

Multiple Criteria Decision Making Günter Fandel,Tomas Gal,2012-12-06 The organizers of the 12th International Conference on Multiple Criteria Decision Making (MCDM) held June 19-23, 1995 in Hagen received the second time the opportunity to prepare an international conference on MCDM in Germany; the first opportunity has been the 3rd International Conference on MCDM in Königswinter, 1979. Quite a time elapsed since then and therefore it might be interesting to compare some indicators of the development of the International Society on MCDM, which has been founded in Königswinter. Stanley Zionts has been elected first president and all 44 participants of that Conference became founding members. Today our Society has over 1200 members and its own Journal (MCDM World Scan). In Hagen, 1996, we had 152 participants from 34 countries. It is interesting to mention that also other Groups established their organization, like the European Working Group on Multiple Criteria Decision Aid, the German Working Group on Decision Theory and Applications, the Multi Objective Programming and Goal Programming Group, ESIGMA, and some others. It is also interesting to note that the intersection of members of all these Groups and Societies is not empty and there is quite a cooperation among them.

Multi-criteria decision making method based on the single valued neutrosophic sets Minxia Luo,Lixian Wu,Kaiyan Zhou,Huarong Zhang, In this paper, a new tangent similarity between single valued neutrosophic sets is given, which contain tangent similarity [23] as a special case. A best-worst multi-criteria decision making method based on the single valued neutrosophic sets is proposed. To achieve this goal, we design an algorithm to identify the best and worst criteria through computing the outdegrees and in-degrees of the collective single valued neutrosophic preference relation directed network, and then calculate the optimal weight vector of attributes. Moreover, a mathematical model corresponding to the definitions of consistent single valued neutrosophic preference relation is constructed. Finally, the evaluation values of all alternatives are calculated by the proposed new tangent similarity.

Why Great Leaders Don't Take Yes for an Answer Michael A. Roberto,2005-06-06 Harvard Business School's Michael Roberto draws on powerful decision-making case studies from every walk of life, showing how to promote honest, constructive dissent and skepticism; use it to improve decisions; and align organizations behind those decisions. Learn from disasters like the Space Shuttle Columbia and JFK's Bay of Pigs Invasion, from successes like Sid Caesar and Bill Parcells, from George W. Bush's decision-making after 9/11. Roberto complements his compelling case studies with extensive new research on executive decisionmaking. Discover how to test and probe a management team; when 'yes' means 'yes' and when it doesn't; and how to build real consensus that leads to action. Gain important new insights into managing teams, mitigating risk, promoting corporate ethics, and much more.

Ethical Decision Making in Nursing and Health Care James H. Husted, Gladys L.

Husted, 2008 This book provides a systematic approach to bioethical decision making that can help clarify issues in situations where right and wrong may not be clearly defined. This approach is based on the interaction of health professional and patient, focusing on the well-being and right to self-direction of both. Numerous case studies give the professional practice in bioethical decision making. Nearly 50 of them are analyzed in detail at the back of the book. Nurses, physicians, and allied health professionals will find this a valuable resource. Risk and Presidential Decision-making Luca Trenta, 2016-05-20 This book aims at gauging whether the nature of US foreign policy decision-making has changed after the Cold War as radically as a large body of literature seems to suggest, and develops a new framework to interpret presidential decision-making in foreign policy. It locates the study of risk in US foreign policy in a wider intellectual landscape that draws on contemporary debates in historiography, international relations and Presidential studies. Based on developments in the health and environment literature, the book identifies the President as the ultimate risk-manager, demonstrating how a President is called to perform a delicate balancing act between risks on the domestic/political side and risks on the strategic/international side. Every decision represents a 'risk vs. risk trade-off,' in which the management of one 'target risk' leads to the development 'countervailing risks.' The book applies this framework to the study three major crises in US foreign policy: the Cuban Missile Crisis, the seizure of the US Embassy in Tehran in 1979, and the massacre at Srebrenica in 1995. Each case-study results from substantial archival research and over twenty interviews with policymakers and academics, including former President Jimmy Carter and former Senator Bob Dole. This book is ideal for postgraduate researchers and academics in US foreign policy, foreign policy decision-making and the US Presidency as well as Departments and Institutes dealing with the study of risk in the social sciences. The case studies will also be of great use to undergraduate students.
