Unrecognised Subjects in International Law Władysław Czapliński, Agata Kleczkowska, 2019-01-23 edited by Władysław Czapliński and Agata Kleczkowska The book discusses a variety of issues related to two important international law institutions: international legal personality and recognition. Respective studies concern the legal situation and classification of various categories of non-recognised entities, the obligation to recognise and not to recognise specific subjects, rights and obligations of those entities (including, for example, state immunity and obligations in respect of human rights), and international liability for unlawful recognition. The authors of the texts are both eminent scientists, recognised specialists in the field of international law, as well as young lawyers, just starting their adventure with research work. The authors come from various parts of the world and represent a diverse approach to research methodology. Authors: Maurizio Arcari, Chun-i Chen, Władysław Czapliński, Natividad Fernández Sola, Łukasz Gruszczyński, Shotaro Hamamoto, Agata Kleczkowska, Anne Lagerwall, Margaret E. McGuinness, Marcin Menkes, Enrico Milano, Stefan Oeter, Dagmar Richter, Przemysław Saganek, Galina Shinkaretskaia, María Isabel Torres Cazorla, Szymon Zaręba.

Perspectives on Deep-Sea Mining Rahul Sharma, 2022-01-13 This book is a sequel to 'Deep-Sea Mining: Resource Potential, Technical and Environmental Considerations' (2017) and 'Environmental Issues of Deep-Sea Mining: Impacts, Consequences and Policy Perspectives' (2019), and aims to provide a comprehensive volume on different perspectives of deep-sea mining from specialists around the world. The work is timely, as deep-sea minerals continue to enthuse researchers involved in activities such as ascertaining their potential as alternative sources for critical metals for green energy and other industrial applications, as well as technology development for their sustainable exploration and exploitation, while addressing environmental concerns. With a steady increase in the number of contractors having exclusive rights over large tracts of seafloor in the 'Area', i.e. area beyond national jurisdictions, the International Seabed Authority, mandated with the responsibility of regulating such activities, is in the process of developing a code for exploitation of deep-sea minerals. These, coupled with growing interest among private entrepreneurs, investment companies and policy makers, underscore the need for updated information to be made available in one place on the subject of deep-sea mining. The book evaluates the potential and sustainability of mining for deep-sea minerals compared to other land-based deposits, the technologies needed for mining and processing of ores, the approach towards environmental monitoring and management, as well as the regulatory frameworks and legal challenges to manage deep-sea mining activities. The book is expected to serve as an important reference for all stakeholders including researchers, contractors, mining companies, regulators and NGOs involved in deep-sea mining.

International Law and Corporate Actors in Deep Seabed Mining Joanna Dingwall, 2021-07-08 The deep seabed beyond national jurisdiction (known as the Area) comprises almost three-quarters of the entire surface area of the oceans, and is home to an array of prized commodities including valuable metals and rare earth elements. In recent years, there has been a marked growth in deep seabed investment by private corporate actors, and an increasing impetus towards exploitation. This book addresses the unresolved legal challenges which this increasing corporate activity will raise over the coming years, including in relation to matters of common management, benefit-sharing, marine environmental protection, and investment protection. Acting under the United Nations Convention on the Law of the Sea (UNCLOS), the International Seabed Authority is responsible for regulating the Area for the benefit of humanity and granting mining contracts. A product of its history, the UNCLOS deep seabed regime is an unlikely hybrid of capitalist and communist values, embracing the role of private actors while enshrining principles of resource distribution. As technological advances begin to outstrip legal developments, this book assesses the tension between corporate commercial activity in the Area and the achievement of the common heritage.

Engineering Applications of Neural Networks Dominic Palmer-Brown, Chrisina Draganova, Elias Pimenidis, Haris Mouratidis, 2009-08-19 A cursory glance at the table of contents of EANN 2009 reveals the amazing range of neural network and related applications. A random but revealing sample includes: reducing urban concentration, entropy topography in epileptic electroencephalography, phytoplanktonic species recognition, revealing the structure of childhood abdominal pain data, robot control, discriminating angry and happy facial expressions, food forecasting, and assessing credit worthiness. The diverse nature of applications demonstrates the vitality of neural computing and related soft computing approaches, and their relevance to many key contemporary technological challenges. It also illustrates the value of EANN in bringing together a broad spectrum of delegates from across the world to learn from each other's related methods. Variations and extensions of many methods are well represented in the proceedings, ranging from support vector machines, fuzzy reasoning, and Bayesian methods to snap-drift and spiking neurons. This year EANN accepted approximately 40% of submitted papers for full-length presentation at the conference. All members of the Program Committee were asked to participate in the reviewing process. The standard of submissions was high, according to the reviewers, who did an excellent job. The Program and Organizing Committees thank them. Approximately 20% of submitted papers will be chosen, the best according to the reviews, to be extended and reviewed again for inclusion in a special issue of the journal Neural Computing and Applications. We hope that these proceedings will help to stimulate further research and development of new applications and modes of neural computing.

Research Handbook on International Marine Environmental Law Rosemary Rayfuse,Aline Jaeckel,Natalie Klein,2023-01-20 This wholly new edition of the Handbook provides an authoritative examination of international law relating to the protection of the marine environment. Chapters critically engage with current legal issues surrounding activities that harm the marine environment, including marine pollution, seabed activities, exploitation of marine biodiversity and climate change, and with the different legal tools and mechanisms, including environmental impact assessments and compliance and dispute settlement mechanisms, used to protect the marine environment. New chapters also address legal issues relating to the role of technology and marine scientific research as well as the application of principles such as public participation. This title contains one or more Open Access chapters.

Satellite Altimetry Over Oceans and Land Surfaces Detlef Stammer,Anny Cazenave,2017-10-31 Satellite remote sensing, in particular by radar altimetry, is a crucial technique for observations of the ocean surface and of many aspects of land surfaces, and of paramount importance for climate and environmental studies. This book provides a state-of-the-art overview of the satellite altimetry techniques and related missions, and reviews the most-up-to date applications to ocean dynamics and sea level. It also discusses related space-based observations of the ocean surface and of the marine geoid, as well as applications of satellite altimetry to the cryosphere and land surface waters; operational oceanography and its applications to navigation, fishing and defense.

Air Pollution Modeling and its Application XVIII Carlos Borrego,Eberhard E. Renner,2011-09-22 Recent developments in air pollution modeling are explored as a series of contributions from researchers at the forefront of their field. This book on air quality modeling and its applications is focused on local, urban, regional and intercontinental modeling, data assimilation and air quality forecasting, model assessment and validation, aerosol transformation, the relationship between air quality and human health and the effects of climate change on air quality. It consists of a series of papers that were presented at the 28th NATO/CCMS Conference on Air Pollution Modeling and its Application held in Leipzig, Germany, May 15-19, 2006. It is intended as reference material for students and professors interested in air pollution modeling at the graduate level as well as researchers and professionals involved in developing and utilizing air pollution models. *Discusses cutting-edge developments on air pollution modeling and air quality issues *Presents topical and highly relevant subjects to the air quality and modeling research community *Provides material that can be used to further improve air quality modeling and to inform the community about recent and novel developments in the field

Selected Decisions and Documents of the Fifteenth Session International Seabed Authority. Session,2009

Risk and the Regulation of Uncertainty in International Law Monika Ambrus,Rosemary Rayfuse,Wouter Werner,2017-10-27 Increasingly, international legal arrangements imagine future worlds or create space for experts to articulate how the future can be conceptualized and managed. With the increased specialization of international law, a series of functional regimes and sub-regimes has emerged, each with their own imageries, vocabularies, expert-knowledge, and rules to translate our hopes and fears for the future into action in the present. At issue in the development of these regimes are not just competing predictions of the future based on what we know about what has happened in the past and what we know is happening in the present. Rather, these regimes seek to deal with futures about which we know very little or nothing at all; futures that are inherently uncertain and even potentially catastrophic; futures for which we need to find ways to identify, conceptualise, manage, and regulate risks the existence of which we can possibly only speculate about. This book explores how the future is imagined, articulated, and managed across the various fields of international law, including the use of force, maritime security, international economic and environmental law, and human rights. It investigates how the future is construed in these various areas; how the costs of risk, risk regulation, risk assessment, and risk management are distributed in international law; the effect of uncertain futures on the subjects of international law; and the way in which international law operates when faced with catastrophic or existential risk.
