Internet Resources for Leisure and Tourism William F. Theobald, H. E. Dunsmore, 2009-11-03 *Internet Resources for Leisure and Tourism* is designed to allow students, academics and practitioners within the leisure and tourism fields to get the very most out of the World Wide Web, helping them track down and fully exploit the most useful resources available. This book includes pointers on how to find and utilise, among other things: the latest economic statistics and demographics, information about government agencies and their programs, the content of universities' websites, up-to-the-minute statistics on visitor arrivals and departures, information on forthcoming meetings and conferences, and details of contents in periodicals. Features include: details of interesting sites for content, design and / or specific information notes emphasizing important information about a site shortcuts and easy-to-use methods for performing functions a wide variety of Internet topics - from how to find a provider to how to compress and decompress files that you download. The book is now updated and supported by a new companion website which provides the reader with regular updates about the latest online developments - thus continually keeping them up to speed in what is an exceptionally fast-moving medium.

Monopsony in Motion Alan Manning, 2013-12-03 What happens if an employer cuts wages by one cent? Much of labor economics is built on the assumption that all the workers will quit immediately. Here, Alan Manning mounts a

systematic challenge to the standard model of perfect competition. Monopsony in Motion stands apart by analyzing labor markets from the real-world perspective that employers have significant market (or monopsony) power over their workers. Arguing that this power derives from frictions in the labor market that make it time-consuming and costly for workers to change jobs, Manning re-examines much of labor economics based on this alternative and equally plausible assumption. The book addresses the theoretical implications of monopsony and presents a wealth of empirical evidence. Our understanding of the distribution of wages, unemployment, and human capital can all be improved by recognizing that employers have some monopsony power over their workers. Also considered are policy issues including the minimum wage, equal pay legislation, and caps on working hours. In a monopsonistic labor market, concludes Manning, the free market can no longer be sustained as an ideal and labor economists need to be more open-minded in their evaluation of labor market policies. Monopsony in Motion will represent for some a new fundamental text in the advanced study of labor economics, and for others, an invaluable alternative perspective that henceforth must be taken into account in any serious consideration of the subject.

Language, Cognition and Gender Alan Garnham, Jane Oakhill, Lisa von Stockhausen, Sabine Sczesny, 2016-08-08 Gender inequality remains an issue of high relevance, and controversy, in society. Previous research shows that language contributes to gender inequality in various ways: Gender-related information is transmitted through formal and semantic features of language, such as the grammatical category of gender, through gender-related connotations of role names (e.g., manager, secretary), and through customs of denoting social groups with derogatory vs. neutral names. Both as a formal system and as a means of communication, language passively reflects culture-specific social conditions. In active use it can also be used to express and, potentially, perpetuate those conditions. The questions addressed in the contributions to this Frontiers Special Topic include: • how languages shape the cognitive representations of gender • how features of languages correspond with gender equality in different societies • how language contributes to social behaviour towards the sexes • how gender equality can

be promoted through strategies for gender-fair language use. These questions are explored both developmentally (across the life span from childhood to old age) and in adults. The contributions present work conducted across a wide range of languages, including some studies that make cross-linguistic comparisons. Among the contributors are both cognitive and social psychologists and linguists, all with an excellent research standing. The studies employ a wide range of empirical methods: from surveys to electro-physiology. The papers in the Special Topic present a wide range of complimentary studies, which will make a substantial contribution to understanding in this important area.
