How Tobacco Smoke Causes Disease ,2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Exquisite Corpse Michael Sorkin, 1991 'Exquisite Corpse' was a game played by the surrealists in which someone drew on a piece of paper, folded it and passed it to the next person to draw on until, finally, the sheet was opened to reveal a calculated yet random composition. In this entertaining and provocative book, Michael Sorkin suggests that cities are similarly assembled by many players acting with varying autonomy in a complicit framework. An unfolding terrain of invention, the city is also a means of accommodating disparity, of contextualizing sometimes startling juxtapositions. Sorkin's aim is to widen the debate about the creation of buildings beyond the immediate issues of technology and design. He discusses the politics and culture of architecture with daring, often devastating, observations about the institutions and personalities who have dominated the profession over the past decade. Their preoccupation with the empty style of 'beach houses and Disneyland' has consistently trivialized the full constructive scope of contemporary architecture's possibilities. Sorkin's interventions range from the development scandals of New York where 'skyscrapers stand at the intersection between grid and greed', through the deconstructivist architectural culture of Los Angeles, to the work and ideas of architects, developers and critics such as Alvar Aalto, Norman Foster, Paul Goldberger, Michael Graves, Coop Himmelblau, Philip Johnson, Leon Krier, Frank Lloyd Wright, Richard Rogers, Carlo Scarpa, James Stirling, Donald Trump, Tom Wolfe and Lebbeus Woods. Throughout Sorkin combines stinging polemic with a powerful call for a rebirth of architecture that is visionary and experimental--a recuperated 'dreamy science'

Biochar for Environmental Management Johannes Lehmann,Stephen Joseph,2012-05-16 Biochar is the carbon-rich product when biomass (such as wood, manure or crop residues) is heated in a closed container with little or no available air. It can be used to improve agriculture and the environment in several ways, and its stability in soil and superior nutrient-retention properties make it an ideal soil amendment to increase crop yields. In addition to this, biochar sequestration, in combination with sustainable biomass production, can be carbon-negative and therefore used to actively remove carbon dioxide from the atmosphere, with major implications for mitigation of climate change. Biochar production can also be combined with bioenergy production through the use of the gases that are given off in the pyrolysis process. This book is the first to synthesize the expanding research literature on this topic. The book's interdisciplinary approach, which covers engineering, environmental sciences, agricultural sciences, economics and policy, is a vital tool at this stage of biochar technology development. This comprehensive overview of current knowledge will be of interest to advanced students, researchers and professionals in a wide range of disciplines.
