Howard Andrew Knox John T.E. Richardson,2011-11-29 Howard Andrew Knox (1885–1949) served as assistant surgeon at Ellis Island during the 1910s, administering a range of verbal and nonverbal tests to determine the mental capacity of potential immigrants. An early proponent of nonverbal intelligence testing (largely through the use of formboards and picture puzzles), Knox developed an evaluative approach that today informs the techniques of practitioners and researchers. Whether adapted to measure intelligence and performance in children, military recruits, neurological and psychiatric patients, or the average job applicant, Knox's pioneering methods are part of contemporary psychological practice and deserve in-depth investigation. Completing the first biography of this unjustly overlooked figure, John T. E. Richardson, former president of the International Society for the History of the Neurosciences, takes stock of Knox's understanding of intelligence and his legacy beyond Ellis Island. Consulting published and unpublished sources, Richardson establishes a chronology of Knox's life, including details of his medical training and his time as a physician for the U.S. Army. He describes the conditions that gave rise to intelligence testing, including the public's concern that the United States was opening its doors to the mentally unfit. He then recounts the development of intelligence tests by Knox and his colleagues and the widely-discussed publication of their research. Their work presents a useful and extremely human portrait of psychological testing and its limits, particularly the predicament of the people examined at Ellis Island. Richardson concludes with the development of Knox's work in later decades and its changing application in conjunction with modern psychological theory.

Framing the moron Gerald O'Brien, 2015-11-01 Many people are shocked upon discovering that tens of thousands of innocent persons in the United States were involuntarily sterilized, forced into institutions, and otherwise maltreated within the course of the eugenic movement (1900–30). Such social control efforts are easier to understand when we consider the variety of dehumanizing and fear-inducing rhetoric propagandists invoke to frame their potential victims. This book details the major rhetorical themes employed within the context of eugenic propaganda, drawing largely on original sources of the period. Early in the twentieth century the term “moron” was developed to describe the primary targets of eugenic control. This book demonstrates how the image of moronity in the United States was shaped by eugenicists. This book will be of interest not only to disability and eugenic

scholars and historians, but to anyone who wants to explore the means by which pejorative metaphors are used to support social control efforts against vulnerable community groups.
