Logistics and Transportation Raja G. Kasilingam,2012-12-06 Logistics is a \$700 billion industry in the USA and is the second largest employer of college graduates. Logistics costs account for nearly 30% of the sales dollar, and logistics activities are essential to satisfying the ever- changing customer demand in terms of variety and availability. Today the need for cutting edge, sophisticated logistics practices has never been greater. This unique text is squarely focused on the key activities within the functional areas of logistics and transportation, with emphasis placed on the quantitative treatment of the design and planning issues in logistics. In scope, Logistics and Transportation comprehensively covers almost all the elements of the supply chain. Moreover, it includes a number of topics that are generally not covered by most popular logistics texts. These include functional areas such as: vendor selection, inventory models with inventory costs, advanced transportation models, logistics metrics, and latest trends in logistics. The text is primarily designed for use in the classroom by senior undergraduate and graduate-level students. It is also a useful resource for practicing transportation and logistics professionals. Readers will appreciate the references for recommended further reading, related training aids and problem sets given at the end of each chapter, as well as the two comprehensive logistics cases presented at the end of the text.

The Search for Negotiated Peace David S. Patterson,2012-09-10 The First World War was an epic event of huge proportions that lasted over four years and involved the armies of more than twenty nations, resulting in 30 million casualties, including more than 8 million killed. Set against the backdrop of this massive carnage, The Search for Negotiated Peace is the gripping story of the events that moved high profile American and European citizens, particularly women, into the international peace movement. This small, transatlantic network put forth proposals for changing the international system of negotiation. They supported non-annexationist war aims and attempted to discredit nations' secret diplomacy, militarism and narrowly nationalistic practices. Instead, they wanted to develop a 'new diplomacy.' David Patterson skillfully develops the interactions of many of the notable leaders of the movement, including Jane Addams, Aletta Jacobs, and Rosika Schwimmer, into an absorbing narrative that brings together the various strands of women's history, international diplomatic history, and peace history for the first time. The Search for Negotiated Peace is an essential read for anyone interested in the social history of World War I and the foundations of citizen activism today.

Functional Molecular Silicon Compounds II David Scheschkewitz,2014-07-08 The series Structure and Bonding publishes critical reviews on topics of research concerned with chemical structure and bonding. The scope of the series spans the entire Periodic Table and addresses structure and bonding issues associated with all of the elements. It also focuses attention on new and developing areas of modern structural and theoretical chemistry such as nanostructures, molecular electronics, designed molecular solids, surfaces, metal clusters and supramolecular structures. Physical and spectroscopic techniques used to determine, examine and model structures fall within the purview of Structure and Bonding to the extent that the focus is on the scientific results obtained and not on specialist information concerning the techniques themselves. Issues associated with the development of bonding models and generalizations that illuminate the reactivity pathways and rates of chemical processes are also relevant. The individual volumes in the series are thematic. The goal of each volume is to give the reader, whether at a university or in industry, a comprehensive overview of an area where new insights are emerging that are of interest to a larger scientific audience. Thus each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years should be presented using selected examples to illustrate the principles discussed. A description of the physical basis of the experimental techniques that have been used to provide the primary data may also be appropriate, if it has not been covered in detail elsewhere. The coverage need not be exhaustive in data, but should rather be conceptual, concentrating on the new principles being developed that will allow the reader, who is not a specialist in the area covered, to understand the data presented. Discussion of possible future research directions in the area is welcomed. Review articles for the individual volumes are invited by the volume editors. Readership: research scientists at universities or in industry, graduate students Special offer for all customers who have a standing order to the print version of Structure and Bonding, we offer free access to the electronic volumes of the Series published in the current year via SpringerLink.

Computational Science and Its Applications - ICCSA 2005 Osvaldo Gervasi,Marina L. Gavrilova,Vipin Kumar,Antonio Laganà,Heow Pueh Lee,Youngsong Mun,David Taniar,Chih Jeng Kenneth Tan,2005-05-02 The four volume set assembled following The 2005 International Conference on Computational Science and its Applications, ICCSA 2005, held in Suntec International Convention and Exhibition Centre, Singapore, from 9 May 2005 till 12 May 2005, represents the ?ne collection of 540 refereed papers selected from nearly 2,700 submissions. Computational Science has ?rmly established itself as a vital part of many scienti?c investigations, a?ecting researchers and practitioners in areas ranging from applications such as aerospace and automotive, to emerging technologies such as bioinformatics and nanotechnologies, to core disciplines such as ma- ematics, physics, and chemistry. Due to the shear size of many challenges in computational science, the use of supercomputing, parallel processing, and - phisticated algorithms is inevitable and becomes a part of fundamental t- oretical research as well as endeavors in emerging ?elds. Together, these far reaching scienti?c areas contribute to shape this Conference in the realms of state-of-the-art computational science research and applications, encompassing the facilitating theoretical foundations and the innovative applications of such results in other areas.

Grammatical systems without language borders Heike Wiese, 2023-12-11 Current research in grammatical analysis and sociolinguistics points to two core characteristics of language that seem incommensurable at first sight: (1) research on linguistic structure indicates internal organisation and coherence, and the workings and interactions of distinct grammatical systems, but (2) sociolinguistic research suggests that language borders and bound “languages” are counterfactual social constructs that cannot capture the diversity and fluidity of actual language use. This seems to constitute something like a “quantum-linguistic” paradox: language systems aren’t real (they are just ideological constructions), but at the same time, they are a reflection of actual structure. This book shows how this paradox can be resolved through an architecture that allows for grammatical systems without presupposing language borders: this architecture puts communicative situations, rather than languages, at the core of linguistic systematicity, while named languages are captured as optional sociolinguistic indices. The approach builds on insights from “free-range” language, a metaphor for language in settings that are less confined by monoglossic ideologies. The author looks at four different kinds of settings: urban markets, heritage language settings, multiethnic adolescent peer-groups, and digital social media. Central lessons to be learned from such free-range language settings are: (1) communicative situations support linguistic differentiation and can thus be the basis for fluid registers; (2) grammatical systematicity is grounded in communicative situations and does not require bound languages and linguistic borders; (3) named “languages” can emerge as social indices signalling belonging, but this is an optional, not a necessary development.
