

The Ring From Outer Space

G. S. Sachdeva

Ringworld Larry Niven,1985-09-12 Winner of the Hugo and Nebula Awards for best novel Four travelers come to the ringworld. . . Louis Wu: human and old; bored with having lived too fully for far too many years. Seeking a challenge, and all too capable of handling it. Nessus: a trembling coward, a puppeteer with a built-in survival pattern of nonviolence. Except that this particular puppeteer is insane. Teela Brown: human; a wide-eyed youngster with no allegiances, no experience, no abilities. And all the luck in the world. Speaker-To-Animals: kzin; large, orange-furred, and carnivorous. And one of the most savage life-forms known in the galaxy. Why did these disparate individuals come together? How could they possibly function together? And where, in the name of anything sane, were they headed?

Scientists at Work Susan Ring,2006 Presents an introduction to scientists, in simple text with illustrations, describing the work they do in the wild, under the sea, about the past, and in outer space.

Imagining Outer Space Alexander C.T. Geppert,2018-04-25 Imagining Outer Space makes a captivating advance into the cultural history of outer space and extraterrestrial life in the European imagination. How was outer space conceived and communicated? What promises of interplanetary expansion and cosmic colonization propelled the project of human spaceflight to the forefront of twentieth-century modernity? In what way has West-European astroculture been affected by the continuous exploration of outer space? Tracing the thriving interest in spatiality to early attempts at exploring imaginary worlds beyond our own, the book analyzes contact points between science and fiction from a transdisciplinary perspective and examines sites and situations where utopian images and futuristic technologies contributed to the omnipresence of fantasmatic thought. Bringing together state-of-the-art work in this emerging field of historical research, the volume breaks new ground in the historicization of the Space Age.

Trekker Hull Class: Orbital-Assembly Preload-Restrained Segmented Rigid Pressure Vessels with Sandwiched Soft Gas Barriers ,
Sasquatches from Outerspace Tim Yule,2010-05 An educator explores many of the strange and funny mysteries that capture so much media attention and teaches you, through hands-on experiments, how to get to the bottom of these tall tales. You'll have fun while learning how scientists establish reliable knowledge.If you want to know the truth about astrology, UFOs, Big Foot, and the Loch Ness Monster, the Bermuda Triangle, crop circles, vampires, ESP, predicting the future, and more, this book is better than any ouija board or fortuneteller.

Planetary Ring Systems Ellis D. Miner,Randii R. Wessen,Jeffrey N. Cuzzi,2007-12-03 This is the most comprehensive and up-to-date book on the topic of planetary rings systems yet written. The book is written in a style and at a language level easily accessible to the interested non-expert. The authors cover the scientific significance of ring studies, the history of their discovery and characterization, the observations of Pioneer 10 at Jupiter, Pioneer 11 and Voyager 1 at Jupiter and Saturn, Voyager 2 at all four giant planets of the solar system, and Galileo at Jupiter. Each chapter includes extensive notes, references, figures and tables. A bibliography is included at the end of each chapter.

Femtotechnologies and Innovative Projects Alexander Bolonkin,2017-03-15 New macro-projects, concepts, ideas, methods, and innovations are explored here, but hardly developed. There remain many problems that must be researched, modeled, and tested before these summarized research ideas can be practically designed, built, and utilized-that is, fully developed and utilized. Most ideas in our book are described in the following way: 1) Description of current state in a given field of endeavor. A brief explanation of the idea researched, including its advantages and short comings; 2) Then methods, estimation and computations of the main system parameters are listed, and 3) A brief description of possible applications-candidate macro-projects, including estimations of the main physical parameters of such economic developmental undertakings. The first and third parts are in a popular form accessible to the wider reading public, the second part of this book will require some mathematical and scientific knowledge, such as may be found amongst technical school graduate students.

Crimes in Outer Space G. S. Sachdeva,2023-07-30 This book flags and contemplates the lurking problem of space crimes that may escalate and expand with diversification of space activities, greater footfall on the celestial bodies and passage of time, for the lack of appropriate solutions. It appraises the incumbent problems to evolve solutions and make recommendations regarding space crime situations. Recognizing current situation where commercial space travel has commenced, and space tourism is not far behind, the book takes a pole position on discussing the topic with its endemic challenges. Space transportation is expected to lead to commercial mining of celestial mineral resources from the Moon and asteroids, as has been found technically feasible and commercially viable. Space-specific products have been identified for industrial mining, processing, and manufacturing, for which manpower would be necessary, howsoever minimal, despite artificial intelligence devices. Blueprints for space habitations on the Moon and Mars are being prepared. In this scenario, where outer space and celestial bodies may soon be inhabited by multi-nationality, multi-ethnic and multi-cultural groupings of tourists, workers, and residents, given cramped and not so comfortable or private living spaces, attitudinal disparities and conflicting beliefs, differences, disputes, conflicts, and crimes are sure to raise their head. Economic activity and business culture may usher in crimes of competition and spying on intellectual property. Space crimes through technologies like cyber, lasers, etc., may also permeate the space domain for ill-intentioned abuses. The criminals may be individuals or collective groups or incognito terrorists. The book also discusses crimes and near-crimes that have already occurred in space but have been ignored or condoned. Absence of sovereignty on celestial bodies coupled with crimes in space or on celestial bodies, presents problems of jurisdiction, extradition, and other legal procedures. The dilemma of multi-national judicial systems, legal codes and norms of social justice need to be resolved by a specialized treaty reconciling major bends in the existing system vis-à-vis the nature of space crimes. Limitations in handling such crimes by the existing judicial system under established doctrines of international law by International Court of Justice or International Criminal Court, is highlighted in the book. It has strong take-aways for research scholars, law fraternity, diplomatic corps, judicial administration, policy-makers and the political class, enabling them to pro-actively initiate action for suitable answers.

The Cosmic Doctrine Dion Fortune,2017-01-31 The Cosmic Doctrine is a condensed blueprint outline of God's manifestation in this creation. Complex indeed! But what has tended to bother some about the Cosmic Doctrine teaching has been the almost total emphasis in explaining evolution simply as being the psychic nuts and bolts of God. Leaving one with the impression that God may be reduced from a Great and Infinite Being to a kind of mechanical Newtonian clockwork. However there is much more to it than that. The higher up the planes you go, although esoteric theory tends to describe it as all more abstract, in actual fact things become so much more complex, vibrant, vivid, bursting, and brimming with life in incredible profusion. It is another form of experience however. The broadest, though simple, analogy would be to liken the existence on the higher levels as something after the order of a Bach fugue - which could indeed seem to some a rather dry abstraction, but which to the attuned and educated ear is a revelation of divinity, harmony and celestial order. The reality is not easy to describe in concepts, let alone in words. How best to describe a rainbow to a blind man? Contents Introduction Section I. THE EVOLUTION OF THE COSMOS. - 1. Space Criminology Jack Lampkin,Rob White,2023-10-30 As humans expand the frequency and scale of interactions off-planet, Space Criminology ponders the nature of crime, harm and transgression in outer space and possible responses to these. The first book of its kind, it discusses the dynamics of space crime, from those involving powerful elites through to those associated with the mundane interactions of people living and working in space. It is essential reading for anyone interested in extra-terrestrial crime, space law, and criminal justice.

Black Hole Blues and Other Songs from Outer Space Janna Levin,2016-03-29 The authoritative story of the headline-making discovery of gravitational waves—by an eminent theoretical astrophysicist and award-winning writer. From the author of How the Universe Got Its Spots and A Madman Dreams of Turing Machines, the epic story of the scientific campaign to record the soundtrack of our universe. Black holes are dark. That is their essence. When black holes collide, they will do so unilluminated. Yet the black hole collision is an event more powerful than any since the origin of the universe. The profusion of energy will emanate as waves in the shape of spacetime: gravitational waves. No telescope will ever record the event; instead, the only evidence would be the sound of spacetime ringing. In 1916, Einstein predicted the existence of gravitational waves, his top priority after he proposed his theory of curved spacetime. One century later, we are recording the first sounds from space, the soundtrack to accompany astronomy's silent movie. In Black Hole Blues and Other Songs from Outer Space, Janna Levin recounts the fascinating story of the obsessions, the aspirations, and the trials of the scientists who embarked on an arduous, fifty-year endeavor to capture these elusive waves. An experimental ambition that began as an amusing thought experiment, a mad idea, became the object of fixation for the original architects—Rai Weiss, Kip Thorne, and Ron Drever. Striving to make the ambition a reality, the original three gradually accumulated an international team of hundreds. As this book was written, two massive instruments of remarkably delicate sensitivity were brought to advanced capability. As the book draws to a close, five decades after the experimental ambition began, the team races to intercept a wisp of a sound with two colossal machines, hoping to succeed in time for the centenary of Einstein's most radical idea. Janna Levin's absorbing account of the surprises, disappointments, achievements, and risks in this unfolding story offers a portrait of modern science that is unlike anything we've seen before.

From Outer Space to Inner Space Dr. Edgar Mitchell,2023-01-01 The sixth man who walked on the moon shares his journey to the stars, into the mind, and beyond. In February 1971, as Apollo 14 astronaut Edgar Mitchell hurtled Earthward through space, he was engulfed by a profound sense of universal connectedness. He intuitively sensed that his presence and that of the planet in the window were all part of a deliberate, universal process, and that the glittering cosmos itself was, in some way, conscious. The experience was so overwhelming, Mitchell knew his life would never be the same. For the next thirty-five years, he embarked on another journey, an inward exploration of the ineffable mystery of human consciousness and being. Mitchell left NASA to form the Institute of Noetic Sciences (IONS). There he initiated research in areas of study previously neglected by mainstream science and constructed a theory that could explain not only the mysteries of consciousness, but also the psychic event—what spiritualists call a “miracle” and scientists dismiss altogether. Mitchell also created a new dyadic model of reality, revealing a self-aware universe not predetermined by the laws of physics, preordained by deities, or infinitely malleable. While human actions are generally subject to the laws of physics, these laws are also influenced by the mind. From Outer Space to Inner Space traces two remarkable journeys—one through space and one through the mind. Together they fundamentally alter the way we understand the miracle and mystery of being, and ultimately reveal humankind's role in its own destiny. Previously published as The Way of the Explorer, this edition includes a new foreword by Avi Loeb, an afterword by Dean Radin, and a postscript chapter by the author.

The Geostationary Ring Martha Mejía-Kaiser,2020-06-29 The Geostationary Ring: Practice and Law by Martha Mejía-Kaiser addresses numerous physical aspects of this highly sought-after orbital region and analyses in unprecedented detail the evolution of its use, coordination and related disputes and efforts to keep it operational by clearing it of space debris.
