<u>Critical Infrastructure Protection XII</u> Jason Staggs,Sujeet Shenoi,2018-12-17 The information infrastructure – comprising computers, embedded devices, networks and software systems – is vital to operations in every sector: chemicals, commercial facilities, communications, critical manufacturing, dams, defense industrial base, emergency services, energy, financial services, food and agriculture, government facilities, healthcare and public health, information technology, nuclear reactors, materials and waste, transportation systems, and water and wastewater systems. Global business and industry, governments, indeed society itself, cannot function if major components of the critical information infrastructure are degraded, disabled or destroyed. Critical Infrastructure Protection XII describes original research results and innovative applications in the interdisciplinary field of critical infrastructure protection. Also, it highlights the importance of weaving science, technology and policy in crafting sophisticated, yet practical, solutions that will help secure information, computer and network assets in the various critical infrastructure sectors. Areas of coverage include: Themes and Issues; Infrastructure Protection; Infrastructure Modeling and Simulation; Industrial Control Systems Security. This book is the twelfth volume in the annual series produced by the International Federation for Information Processing (IFIP) Working Group 11.10 on Critical Infrastructure Protection, an international community of scientists, engineers, practitioners and policy makers dedicated to advancing research, development and implementation efforts focused on infrastructure protection. The book contains a selection of fifteen edited papers from the Twelfth Annual IFIP WG 11.10 International

Conference on Critical Infrastructure Protection, held at SRI International, Arlington, Virginia, USA in the spring of 2018. Critical Infrastructure Protection XII is an important resource for researchers, faculty members and graduate students, as well as for policy makers, practitioners and other individuals with interests in homeland security.

Correlation Coefficients Calculated on a World Wide Basis Between Observed Secchi Depths and Other Simultaneously Measured Standard Oceanographic Parameters Patrick Joseph Brown,1973 The distributions of Secchi depths (i.e. water transparency) with simultaneously measured standard oceanographic parameters on file at the National Oceanographic Data Center are surveyed on a global basis. An inventory of many of the oceanographic parameters is given for all Marsden squares. Correlation coefficients between Secchi depths and eleven other parameters are also tabulated. Linear regression equations for some twenty-one selected ocean areas relating Secchi depth and the other parameters are presented, and in some cases plotted. No simple and consistent

relations between Secchi depth and other parameters are evident; however, several trends are noted. Forel color and oxygen measurements show trends toward an inverse proportionality with Secchi depths while bottom depth data indicate a possible direct proportionality. (Author).

  Réseaux véhiculaires : Modèles et algorithmes LABIOD Houda,BEYLOT André-Luc,2013-09-01 L'émergence des systèmes de transport intelligents est due principalement aux grands progrès technologiques dans les domaines des

protocoles de communication sans fil, des systèmes embarqués et temps réel. Très prometteurs, ces derniers permettront d'offrir un large éventail de nouvelles applications, de nouveaux véhicules communicants et de définir un éco-système de mobilités diversifiées. Les caractéristiques inhérentes à ces systèmes posent de nouveaux challenges en termes de protocoles et d'architectures de communications. Les réseaux véhiculaires connaissent des évolutions récentes : cet ouvrage propose d'en traiter les problèmes critiques, à savoir le contrôle de congestion, le routage, le clustering, l'interconnexion entre le réseau véhiculaire et les réseaux LTE/LTE Advanced, le contrôle du trafic routier ou encore la simulation à travers les outils et la génération de traces de mobilité. D'approche analytique, cet ouvrage se présente comme la genèse d'un nouveau domaine qui est en train de bouleverser les modèles de transports dans nos sociétés.
