Shots Fired in Terminal 2 William Hazelgrove,2018-08-07 On January 6, 2017, a lone gunman took five lives and wounded eight people at Fort Lauderdale Airport. This book is about the Lauderdale shooting told from the perspective of bestselling author William Hazelgrove, who just happened to be there with his wife and children. Though focused on one terrifying incident that the author witnessed, this story is also a prototype of American shootings showing the interplay of victims, police, media, the shooter, and what constitutes this peculiar American form of violence. The author documents the perverse chain of events that set the stage for this tragedy: the failure of police and the FBI to stop this troubled Iraq War veteran, who had earlier approached them and said point-blank that he was hearing voices telling him to kill others; the incredible fact that his weapon was taken and then given back to him, the very gun that would kill five people and shut down a major airport for forty-eight hours; and the circumstances of American society that allowed this gun to be checked through airport security as a legal firearm and then delivered to the killer, who casually strolled into a bathroom, loaded the pistol, and returned to the baggage claim area to start his murderous rampage. Interweaving his dramatic telling of his own experiences with a history of comparable shootings in America, the book presents both an anatomy of these horrifying events and the basis for understanding why they happen and what can be done to stop them.

Transport, Engineering and Architecture Hugh Collis,2003 Transport, Engineering and Architecture is the second book in a series which explores the relationship between engineering and architecture. Divided into chapters devoted to themes such as planning transport systems, bridges, airport and aviation, this book helps today's engineers and architects meet the ongoing challenges of a fast moving and expanding business. Since the nineteenth century and the arrival of mass travel, the need for transport architecture has spawned some of the most impressive structures of recent times. As all forms of travel - air, rail, road and water - continue to expand, the ever-growing numbers of passengers and carriers moving around the world present new tests for architects and engineers. The book is produced in association with Arup, the largest firm of consulting engineers in the world.

Geotechnical Aspects of Underground Construction in Soft Ground Mohammed Elshafie,Giulia Viggiani,Robert Mair,2021-05-10 Geotechnical Aspects of Underground Construction in Soft Ground comprises a collection of 112 papers, four general reports on the symposium themes, the Fujita Lecture, three Special Lectures and the Bright Spark Lecture presented at the Tenth International Symposium on Geotechnical Aspects of Underground Construction in Soft Ground, held in Cambridge, United Kingdom, 27-29 June 2022. The symposium is the latest in a series which began in New Delhi in 1994, and was followed by symposia in London (1996), Tokyo (1999), Toulouse (2002), Amsterdam (2005), Shanghai (2008), Rome (2011), Seoul (2014) and Sao Paulo (2017). This was organised by the Geotechnical Research Group at the University of Cambridge, under the auspices of the Technical Committee TC204 of the International Society for Soil Mechanics and Geotechnical Engineering (ISSMGE). Geotechnical Aspects of Underground Construction in Soft Ground includes contributions from more than 25 countries on research, design and construction of underground works in soft ground. The contributions cover: Field case studies Sensing technologies and monitoring for underground construction in soft ground Physical and numerical modelling of tunnels and deep excavations in soft ground Seismic response of underground infrastructure in soft ground Design and application of ground

improvement for underground construction Ground movements, interaction with existing structures and mitigation measures The general reports give an overview of the papers submitted to the symposium, covered in four technical sessions. The proceedings include the written version of the five invited lectures covering topics ranging from developments in geotechnical aspects of underground construction, tunnelling and groundwater interaction (short and long-term effects), the influence of earth pressure balance shield tunnelling on pre-convergence and segmental liner loading (field observations, modelling and implications on design). Similar to previous editions, Geotechnical Aspects of Underground Construction in Soft Ground represents a valuable source of reference on the current practice of analysis, design, and construction of tunnels and deep excavations in soft ground. The book is particularly aimed at academics and professionals interested in geotechnical and underground engineering.
