

The V 2 Rocket 10

Michael J. Neufeld

V-2 T. D. Dungan, 2019-08-08 A History of One of World War II's Most Advanced and Terrifying Technologies In August 1944, Londoners thought the war might be over by Christmas. But on September 8, 1944, in the London suburb of Chiswick, a thunderous double-boom was heard followed by a huge plume of black smoke rising high into the air. Several minutes later another explosion rocked the earth near Epping. There had been no warnings, no drone of aircraft above, just sudden devastation. Operation Penguin, the V-2 offensive, had begun. The A-4 rocket, better known as the V-2, Vergeltungswaffen Zwei, or Vengeance Weapon 2, was the first ballistic missile to be used in combat. Soaring over 50 miles high at supersonic speeds, the V-2 would strike its target within 5 minutes of launching. Once in the air its deadly warhead was unstoppable. The ancestor of all Cold War and modern day ballistic missiles, as well as the rockets used for space exploration, the V-2 could not win the war for Germany--it was too expensive, too complicated, too inaccurate, and its warhead was too small--but its unprecedented invulnerability and influence on Allied planning made the V-2 and the advancements it represented the ultimate war prize, and British, American, and Soviet forces scrambled to seize German rocket technology along with its scientists and engineers. In *V-2: A Combat History of the First Ballistic Missile*, T. D. Dungan relies on an unparalleled collection of original documents, unpublished photographs, and accounts from those who were there to provide a complete description of the V-2 program, the missile's use in combat, and the race to capture its secrets.

V-2 Ballistic Missile 1942-52 Steven J. Zaloga, 2013-03-20 The German A-4 ballistic missile, better known by its propaganda name of V-2, was the world's first successful ballistic missile, breaking through the atmosphere to reach its target quicker. It was a forerunner of Cold War ballistic missiles and its combat use in 1944-45 set the pattern for the use of Scud ballistic missiles in recent decades. The V-2 offensive lasted from September 1944 until March 1945 with over 3,000 rockets being launched. This book examines the combat record of the V-2 in World War II, with a special focus on how a German missile battalion actually prepared and fired its missiles.

Germany's V-2 Rocket Gregory P. Kennedy, 2006 Germanys V-2 looks at one of the major technological advances of the Second World War, the V-2 ballistic missile. Although dwarfed by today's giant rockets, the V-2 represented a quantum leap beyond anything previously built. During the last six months of the war in Europe, Germany launched thousands of these missiles against the Allies. This book traces the origins and development of the V-2, from groups of individual experimenters in the 1930s to its use as a weapon system. Particular emphasis is paid to such topics as the structure and components of the missile, its ground support equipment, and field procedures. After the war, the V-2 formed the foundation for the space programs of the Soviet Union and United States. Information is included on previously ignored V-2 launches in the United States.

The V2 and the German, Russian and American Rocket Program ,

The Rocket and the Reich Michael J. Neufeld, 2013-09-10 WINNER OF THE DEXTER PRIZE OF THE SOCIETY FOR THE HISTORY OF TECHNOLOGY Launched by the Third Reich in late 1944, the first ballistic missile, the V-2, fell on London, Paris, and Antwerp after covering nearly two hundred miles in five minutes. It was a stunning achievement, one that heralded a new age of ballistic missiles and space launch vehicles. Michael J. Neufeld gives the first comprehensive and accurate account of the story behind one of the greatest engineering feats of World War II. At a time when rockets were minor battlefield weapons, Germany ushered in a new form of warfare that would bequeath a long legacy of terror to the Cold War, as well as the means to go into space. Both the US and USSR's rocket programs had their origins in the Nazi state.

The Rocket Team Frederick Ira Ordway (III), Mitchell R. Sharpe, 1982 From the V-2 to the Saturn moon rocket, this is the inside story of the von Braun team, a group whose experiments in pyrotechnics eventually changed the course of world history.

V2 Murray Barber, 2017-05 The German A4 rocket, or V2 - 'Vergeltungswaffen Zwei' (Vengeance Weapon 2), was the most sophisticated and advanced weapon developed in Europe during the Second World War. From September 1944 to March 1945, German army launch teams fired more than 3,000 V2 rockets at targets in England, France, Belgium and even within Germany itself. Many V2s were fired from mobile launch sites and from concealed wooded areas, using fleets of transporters and trailers with sophisticated ancillary and support vehicles. Travelling at the edge of space, the V2 rockets fell without warning at supersonic speeds, turning buildings and streets into cratered rubble, and terrorizing the civilians targeted by these attacks. Drawing on a wide range of archive sources, rare personal accounts and interviews conducted with personnel associated with the A4/V2 program, rocketry expert Murray R. Barber traces the origins of the V2 and presents a detailed view of the research conducted at the secret, experimental rocket-testing facility at Kummersdorf West and the vast, infamous base at Peenemunde. This important new work reveals the transformation of the rocket into a weapon of war and describes the A4 in detail as well as the intense and often difficult intelligence effort by the Allies to discover more about this highly secret and unprecedented weapon, and to destroy it. The author also describes the field-testing of the A4 rocket, its reliability problems and the remedies and compromises employed to deal with them. He reveals the activities of the SS

and their machinations to gain control of the rocket program from the Wehrmacht, as well as the subsequent operational deployment of the V2 in Operation Penguin, the 'vengeance' offensive against the British Isles. Illustrated throughout with rare and many previously unseen images (including color photographs), technical drawings and maps, this is the most comprehensive book ever on the V2, and includes important new details of the post-war development and testing of the rocket and its role in the dawning of the space age.

Thunder Over the Horizon Clayton K. S. Chun, 2006 It details actual use in combat, as well as current countermeasures and future missile defense systems, serving as a primer on these complex systems and the issues that surround them.--Jacket.

Hitler's Rockets Norman Longmate, 2009-07-23 In Hitler's Rockets Norman Longmate tells the story of the V-2, the technically brilliant but hated weapon, the ancestor and forerunner of all subsequent ballistic missiles. He reveals the devious power-play within the German armed forces and the Nazi establishment that so influenced the creation of the rockets. He shows through contemporary documents and protagonists' accounts how the British intelligence skillfully pieced together often contradictory evidence as it sought to establish the true nature of the threat. Finally he recalls in detail the feel and fears of the time from the viewpoint of those who suffered, and those who were all too conscious that they were the target.

Best of the National Air and Space Museum F. Robert van der Linden, 2016-06-28 Experience the thrill of flying some of the world's most important airplanes and spacecraft. Best of the National Air and Space Museum provides unprecedented access to the most popular museum in the world. The Smithsonian's National Air and Space Museum hosts an average of seven million visits every year. The Udvar-Hazy Center—three football fields long and ten stories high—receives more than one million visits annually. Best of the National Air and Space Museum features the best of both museums, from the Challenger space shuttle and the Wright flyer to the Spirit of St. Louis and the stealth bomber. Robert Van der Linden, curator of aeronautics, has selected the most important, popular, and just plain impressive aircraft and spacecraft from the collections of both museums to be showcased in this beautiful book. Each page spread includes intriguing facts of the item's design, use, mission, specifications, and dimensions. A must-have for space and aviation buffs.

The Mars Project Wernher Von Braun, 1953 This classic on space travel was first published in 1953, when interplanetary space flight was considered science fiction by most of those who considered it at all. Here the German-born scientist Wernher von Braun detailed what he believed were the problems and possibilities inherent in a projected expedition to Mars. Today von Braun is recognized as the person most responsible for laying the groundwork for public acceptance of America's space program. When President Bush directed NASA in 1989 to prepare plans for an orbiting space station, lunar research bases, and human exploration of Mars, he was largely echoing what von Braun proposed in *The Mars Project*.

Von Braun Michael Neufeld, 2017-04-12 Curator and space historian at the Smithsonian's National Air and Space Museum delivers a brilliantly nuanced biography of controversial space pioneer Wernher von Braun. Chief rocket engineer of the Third Reich and one of the fathers of the U.S. space program,

Wernher von Braun is a source of consistent fascination. Glorified as a visionary and vilified as a war criminal, he was a man of profound moral complexities, whose intelligence and charisma were coupled with an enormous and, some would say, blinding ambition. Based on new sources, Neufeld's biography delivers a meticulously researched and authoritative portrait of the creator of the V-2 rocket and his times, detailing how he was a man caught between morality and progress, between his dreams of the heavens and the earthbound realities of his life.

Air Power at the Battlefront Dr Ian Gooderson, 2013-05-13 Ian Gooderson presents a study of close air support in World War II, with the analysis focusing on the use of tactical air power by British and American forces during the campaigns in Italy and northwestern Europe between 1943 and 1945.

Solar Surveyors Peter Bond, 2022-07-29 This is the story of humankind's quest over centuries to learn the true nature of the most dominant object in our Solar System: the Sun. Award-winning science writer Peter Bond describes in detail how our ideas about the Sun have changed over the millennia, starting with the simple observations of classical astronomy and continuing through telescopic observations to the age of nuclear physics. He shows how we discovered the Sun's basic characteristics – its distance, size, temperature and composition – and then describes how, with evermore sophisticated instruments, we have learned about the Sun's enormous energy output, its atmosphere and the explosive eruptions that blast clouds of magnetized gas and high-energy particles toward our world. Most of this book focuses on the Space Age, when suborbital rockets and satellites have probed every aspect of our nearby star. Each of these missions is described in detail, with summaries of their objectives, spacecraft designs, scientific payloads and results. The book also looks forward, describing forthcoming missions that will shed new light on remaining solar mysteries, notably the source of the energy that heats the outer corona to millions of degrees. Richly illustrated with mission photos, design diagrams, and infocharts, this book is a fascinating read for anybody interested in the Sun and our attempts to unravel its secrets.

The Bomb and America's Missile Age Christopher Gainor, 2018-10-15 Aimed at readers interested in the history of the Cold War and of space exploration, the book makes a major contribution to the history of rocket development and the nuclear age.

Space Biology and Medicine: Space and its exploration Arnauld E. Nicogossian, 1993 In this first volume in the Space Biology and Medicine series, contributors describe the current status of their understanding of space, highlighting physical and ecological conditions as well as heavenly bodies, and provide general information that will prove useful in the later volumes. The book is divided into four parts: Part I, Historical Perspective; Part II, The Space Environment; Part III, Life in the Universe; and Part IV, Space Exploration. Chapter contributions were made by both U.S. and Russian authors. The book also features an appendix of Astronomical and Physical Quantities, a detailed subject index, and an 8-page color section.

Race Into Space David Jefferis, Mat Irvine, 2007 An exciting look at the space race of the last century, when two countries spurred on by the Cold War competed to be the leader in space exploration. Features milestones from the early attempts at rocket building to the Russian and American space programs of the 1950s, 60s, 70s and 80s.

High Above Chris Forrester, 2011-08-28 Frequently it is suggested that the 'golden age' of television was during the period 1950-1960. It is true that television almost ruined Hollywood's fortunes during this period. But if this was the authentic golden age, then it was an age of black and white, somewhat limited creativity, poor reception, lack of competition (except in the United States) and – by and large – public service broadcasting. However, if we take 1950 as a generic 'starting point' for modern television broadcasting, then we talk about a kind of prehistoric stage of the medium – in which it remained for the best part of three decades. The younger days of broadcasting were the 1980s; the time when commercial television started on a large scale and, in this youth, was getting younger in terms of programming. Luxembourg-based SES Astra appeared on the scene at exactly this time. Astra was instrumental in the dramatic developments in television that we have witnessed since then. This is the story we want to tell in this book. Without satellite technology and the success of satellite reception, without the resulting mass-market penetration of television sets and general economic prosperity we would not have the necessary base ingredients to make the great leap forward into digital, into HDTV, 3D-television, and the prospects of Ultra High Definition now in sight.
