The First 20 Hours Josh Kaufman, 2013-06-13 Forget the 10,000 hour rule— what if it's possible to learn the basics of any new skill in 20 hours or less? Take a moment to consider how many things you want to learn to do. What's on your list? What's holding you back from getting started? Are you worried about the time and effort it takes to acquire new skills—time you don't have and effort you can't spare? Research suggests it takes 10,000 hours to develop a new skill. In this nonstop world when will you ever find that much time and energy? To make matters worse, the early hours of practicing something new are always the most frustrating. That's

why it's difficult to learn how to speak a new language, play an instrument, hit a golf ball, or shoot great photos. It's so much easier to watch TV or surf the web . . . In *The First 20 Hours*, Josh Kaufman offers a systematic approach to rapid skill acquisition—how to learn any new skill as quickly as possible. His method shows you how to deconstruct complex skills, maximize productive practice, and remove common learning barriers. By completing just 20 hours of focused, deliberate practice you'll go from knowing absolutely nothing to performing noticeably well. Kaufman personally field-tested the methods in this book. You'll have a front row seat as he develops a personal yoga practice, writes his own web-based computer programs, teaches himself to touch type on a nonstandard keyboard, explores the oldest and most complex board game in history, picks up the ukulele, and learns how to windsurf. Here are a few of the simple techniques he teaches: Define your target performance level: Figure out what your desired level of skill looks like, what you're trying to achieve, and what you'll be able to do when you're done. The more specific, the better. Deconstruct the skill: Most of the things we think of as skills are actually bundles of smaller subskills. If you break down the subcomponents, it's easier to figure out which ones are most important and practice those first. Eliminate barriers to practice: Removing common distractions and unnecessary effort makes it much easier to sit down and focus on deliberate practice. Create fast feedback loops: Getting accurate, real-time information about how well you're performing during practice makes it much easier to improve. Whether you want to paint a portrait, launch a start-up, fly an airplane, or juggle flaming chainsaws, *The First 20 Hours* will help you pick up the basics of any skill in record time . . . and have more fun along the way.

System 1 is fast, intuitive, and emotional; System 2 is slower, more deliberative, and more logical. The impact of overconfidence on corporate strategies, the difficulties of predicting what will make us happy in the future, the profound effect of cognitive biases on everything from playing the stock market to planning our next vacation—each of these can be understood only by knowing how the two systems shape our judgments and decisions. Engaging the reader in a lively conversation about how we think, Kahneman reveals where we can and cannot trust our intuitions and how we can tap into the benefits of slow thinking. He offers practical and enlightening insights into how choices are made in both our business and our personal lives—and how we can use different techniques to guard against the mental glitches that often get us into trouble. Winner of the National Academy of Sciences Best Book Award and the Los Angeles Times Book Prize and selected by The New York Times Book Review as one of the ten best books of 2011, *Thinking, Fast and Slow* is destined to be a classic.

Thought, Kahneman explains, has two distinct systems: the fast and intuitive System 1, and the slow and effortful System 2. Intelligent Thinking Cathrine Kowal,2023-06-02 Each day in our life, we are always faced with situations that require us to make choices. Some are easy but there are some which are hard to decide. Most of the time, we make decisions quick enough we never thought about them not unless we realized we have made the wrong ones. Difficult decisions are those that require a deeper level of thinking like when we decide what course to take in college, who to marry, or what career to take. These decisions are often life-changing that we need to be more critical in our thinking. Making the wrong decisions over these matters can have an adverse and long-term effect on us and our future. Despite having to make so many decisions most of the time, it's likely that our parents failed to teach us about decision making and how to do it the smart way. It somehow became a common assumption that making a smart decision is a direct product of intelligent thinking and that it comes naturally. So when you're not born with high intelligence and you aren't a fast thinker, then you are most likely to make bad decisions. However, we need to establish first the relationship between intelligence, thinking fast, and being smart. Does this mean that when you are endowed with high intelligence, you can automatically think fast and make smart decisions? This book is geared towards establishing the relationship between intelligent thinking in correlation with theories of intelligence and decision making through quick-mind processing. As we establish the significance of fast-thinking process in making quality decisions, this book aims to teach you ways to develop your quick-thinking ability and smart decision making.
