The Physiology of Thirst and Sodium Appetite James Thomas Fitzsimons, 1979-10-18

The Physiology of Thirst and Sodium Appetite G. de Caro, A.N. Epstein, M. Massi, 2013-12-11 The behavioral neuroscience of thirst and sodium appetite are research ventures that have expanded dramatically in recent years. Work done in the mid-1950s and early 1960s made it clear that drinking behavior could be affected by direct manipulations of the brain, especially by brain damage and by pharmacological treatments. Since that time experimental approaches have diversified and the research enterprise has attracted the interest of a broad international community of scientists. Many aspects of both thirst and sodium appetite are being studied. The most prominent of these are: 1) phylogenetic and ontogenetic aspects of the phenomena of drinking behavior, 2) the mechanisms of a variety of dipsogenic and antidipsogenic treatments, both drugs and hormones, 3) the biological controls of drinking and their interaction with the regulation of blood volume and blood pressure, 4) the peripheral signals of drinking including the role of the baro- and volume-receptors, 5) the receptor systems within the brain and the neuroanatomical circuitry for thirst and sodium appetite, and 6) the possible roles of brain sodium and of the hormones of sodium conservation in the arousal of sodium appetite. This acceleration of basic research activity has given insights into the clinical disorders of thirst and salt appetite and has produced pharmacological agents of potential therapeutic use.

ISSUES ON WAR & PEACE Julie Kimber, Phillip Deery, Warwick Eather, Drew Cottle, Nic Maclelland, Jonathan Strauss, Michael Hamel-Green, Jeanette Debney-Joyce, Doris LeRoy, David Faber, 2015-02-15 These proceedings carry some of the papers delivered at the 14th Biennial Labour History Conference, 11-13 February 2015. Titled Fighting Against War: Peace Activism in the Twentieth Century, the conference was held at the University of Melbourne. A conference book of refereed papers has been published under that title and these proceedings carry the non-refereed papers received for publication. There is one exception to that rule: the paper written by Warwick Eather and Drew Cottle, published below, which underwent double-blind refereeing. It is an important paper, which demonstrates with compelling evidence that the rabbit was anything but a curse to the many men, women, and children who took advantage of the rabbit industry's resilience during the economic storms for much of the twentieth century. It exemplifies how meticulous research in labour history can provide an entirely new understanding of an otherwise much-maligned animal in Australia. The next three papers all concern opposition to nuclear testing, from the 1950s to the 1980s. When read together, they provide a convincing argument for the importance and efficacy of the diverse anti-nuclear movements in Australia, New Zealand and the Pacific Islands. Whilst there are inevitable overlaps, these papers emphasise different and often neglected dimensions: the struggle for recognition of and compensation for the devastating effects of nuclear testing; the internal dynamics of the various nuclear disarmament organisations; and an evaluation of their impact on government policy, culminating in the Rarotonga Treaty of 1985. The last three papers cover aspects of World War I, the Cold War, and the Vietnam War. The first focuses on the role of one redoubtable woman, Ettie Rout, in challenging popular misconceptions about venereal disease held by military authorities and the soldiers themselves. The next paper examines the life of a Czech Lutheran pastor, Professor Josef Hromádka, who visited Australia twice during the 1950s. Hromádka attempted to juggle Christianity with Socialism, which – in the prevailing climate of strident anti-communism – provoked hostile receptions and Cold War invective. The final paper in this collection brings to life, through the reflections of a “participant observer”, the preparations, conduct and impact of Adelaide's largest anti-war demonstration: the protest against the invasion of Iraq in 2003 organised by the NoWar collective. Its efforts, undertaken by a broad range of rank and file activists, is a fitting reminder, and exemplar, of the theme of our conference: peace activism in the twentieth century.

Neurocomputing James A. Anderson, James Arthur Anderson, Andras Pellionisz, Edward Rosenfeld, 1993-08-26 In bringing together seminal articles on the foundations of research, the first volume of Neurocomputing has become an established guide to the background of concepts employed in this burgeoning field. Neurocomputing 2 collects forty-one articles covering network architecture, neurobiological computation, statistics and pattern classification, and problems and applications that suggest important directions for the evolution of neurocomputing. James A. Anderson is Professor in the Department of Cognitive and Linguistic Sciences at Brown University. Andras Pellionisz is a Research Associate Professor in the Department of Physiology and Biophysics at New York Medical Center and a Senior National Research Council Associate to NASA. Edward Rosenfeld is editor and publisher of the newsletters Intelligence and Medical Intelligence.

Nutrition of the Rabbit, 3rd Edition Carlos de Blas, Julian Wisewan, 2020-02-11 Bringing together international expertise in rabbit production, topics covered in this fully updated volume include digestive physiology, feed formulation and product quality, as well as feeding strategies, feed processing, feed management around weaning and the relationship between nutrition and intestinal health. Brand new to this edition, the chapters also discuss the development of immune response and the role of intestinal microbiota, new dietary sources and additives, and feeding behaviour in pasture and organic feeding. A valuable resource for researchers and students of animal nutrition and production, this book provides a comprehensive, research-based review of nutrition for these important animals.

Thirst and Sodium Appetite Sebastian Grossman, 2012-12-02 Thirst and Sodium Appetite: Physiological Basis describes the phenomenon of thirst and the mechanisms that define the need for water. Thirst and appetite has generated much study and research about the physiological, endocrinological, and pharmacological mechanisms that influence water intake. However, in this book, other concerns have been emphasized, such as the significance of brain mechanisms in the subject matter. This book, consisting of 11 chapters, starts with a basic description of thirst then to an analysis of basic physiological mechanisms that determine water intake. Another topic also discussed in this book is various experimental paradigms that resulted to the dual-depletion theory of thirst. The neuroanatomical, neuroendocrinological, and neuropharmacological brain mechanisms are covered in three chapters of this book. These brain mechanisms respond to different peripheral signals that stimulate the thirst. The final chapters

are dedicated to sodium appetite. Although it has lesser literature than thirst has, there have been significant developments in the understanding of the role of sodium appetite in extracellular thirst. The last chapter reviews the questions that has kept investigators at bay and recommends direction of where future research may go.

Thirst David J. Ramsay,David Booth,2012-12-06 At one time or another, everyone has said I am thirsty. Yet what causes this sensation of thirst? It is obvious that a certain quantity of fluid must be present for the body to function normally. How does a water deficit in the body then influence drinking habits? But supposing the physiological need is met, what about the psychological need or social need? Water is certainly the most necessary fluid; then why do we humans often prefer other beverages, even at great cost of effort or money or health? The subject of thirst and drinking behavior are uniquely discussed in this book. For the first time both the physiological and the psychological aspects of water and beverage consumption are examined in one volume. The many recent developments concerning how a lack of water is signalled physiologically and processed neurally to affect drinking behavior are critically surveyed. Prospects for understanding the cultural and sensory influences on beverage consumption are mapped out. The thirty-one chapters by authorities in the field were all mutually reviewed and revised in the light of precirculated comments and round-table discussions. Together they provide a complete picture of the current state of knowledge on what determines fluid consumption in human beings and animals.

The Acquisition of Anaphora in Child Mandarin Ruya Li,2024-05-10 The Acquisition of Anaphora in Child Mandarin explores how Mandarin-speaking children’s interpretation of the reflexive ziji and their use of null arguments can be understood under the notions of locality and prominence. This book investigates the interpretation of ziji and the use of null subjects and null objects by experimenting on Mandarin-speaking children and adults using a range of experimental techniques such as the truth value judgment task, the picture identification task, and the story-telling task. The book provides evidence to show that reflexive binding and argument dropping are determined by the interplay between universal principles and language-specific properties. It shows that children at the age of 4 make an adult-like distinction between the anaphoric and logophoric interpretations of ziji. The former is subject to the locality condition manifested by the blocking effect on the long-distance binding of ziji, whereas the latter is free from the locality condition and closely related to the understanding of the false beliefs of others. This book is an important contribution to language acquisition research and can serve as a valuable reference for graduate students and researchers in the field of language acquisition, Chinese linguistics, psycholinguistics, and cognitive science.
