Understanding Human Time Kasia M. Jaszczolt,2023-05-18 This book explores the time that we (think we) experience and the concept of time in our beliefs, our knowledge, and our fears. We believe that time passes, we know that death is inevitable, we fear that we are going to be late. How do these human feelings and sensations of time relate to metaphysical time of tenseless reality? What do different languages tell us about the nature of human time? And what exactly is the flow of time? The chapters in this volume bring together insights from linguists and philosophers to examine questions about time on the micro-level of physical reality, as well as time in language and discourse on the macro-level of social reality. The unifying theme is that in order to understand human time we have to discover not only how we think and speak about time, but also what it is that makes us think and speak about it in a certain way.

Myths, Medicine & Misinformation: Janelle "Jellybean" Smith-Haff,2012-12-14 Unbridle the caring spirit of humankind through the spirit of the equine. Does the soul communicate with little girls through the spirit of the horse to begin the process of awakening females to their power? Is this why little girls experience a "pink phase" and a "horse phase"? Did the myths of yesteryear involving women and horses serve a spiritual purpose, or was their purpose solely to subjugate the power of women? Does the horse's reputation as being a forgiving animal lie in the fact that it sees in humans the same energy that exists in the energy of the Divine? Intertwined in Jellybean's continuing spiritual journey is a comprehensive primer for the newbie horse owner and owners of new horses on the cradle-to-grave care of the whole horse. Is the homeopathic remedy "Ledum" a successful alternative treatment for horses afflicted with headshaking syndrome? Is antioxidant therapy an alternative to joint supplement therapy for the treatment of arthritic conditions? How does the pH balance affect a horse's arthritic condition? Are the three most important and most basic nutritional needs of horses being provided by owners? With Universal guidance, Jellybean leads you into a self-empowering equine-human relationship; one that combines the powers of will and desire with T.I.M.E.E. (time, insight, money, exhilarating, exhaustion). Read and learn how to find that space within your self, as it is in this space where you'll become best friends with your horse, and so much more.

Variable Speed AC Drives with Inverter Output Filters Jaroslaw Guzinski,Haitham Abu-Rub,Patryk Strankowski,2015-11-23 The advance of variable speed drives systems (VSDs) engineering highlights the need of specific technical guidance provision by electrical machines and drives manufacturers, so that such applications can be properly designed to present advantages in terms of both energy efficiency and expenditure. This book presents problems and solutions related to inverter-fed electrical motors. Practically orientated, the book describes the reasons, theory and analysis of those problems. Various solutions for individual problems are presented together with the complete design process, modelling and simulation examples with MATLAB/Simulink on the companion website. A key focus of Variable Speed AC Drives with Inverter Output Filters is to examine the state variables estimation and motor control structures which have to be modified according to the used solution

(filter). In most control systems the structure and parameters are taken into account to make it possible for precise control of the motor. This methodology is able to include modifications and extensions depending on specific control and estimation structures. Highly accessible, this is an invaluable resource for practising R&D engineers in drive companies, power electronics & control engineers and manufacturers of electrical drives. Senior undergraduate and postgraduate students in electronics and control engineering will also find it of value.

Johan van Benthem on Logic and Information Dynamics Alexandru Baltag, Sonja Smets, 2014-08-27 This book illustrates the program of Logical-Informational Dynamics. Rational agents exploit the information available in the world in delicate ways, adopt a wide range of epistemic attitudes, and in that process, constantly change the world itself. Logical-Informational Dynamics is about logical systems putting such activities at center stage, focusing on the events by which we acquire information and change attitudes. Its contributions show many current logics of information and change at work, often in multi-agent settings where social behavior is essential, and often stressing Johan van Benthem's pioneering work in establishing this program. However, this is not a Festschrift, but a rich tapestry for a field with a wealth of strands of its own. The reader will see the state of the art in such topics as information update, belief change, preference, learning over time, and strategic interaction in games. Moreover, no tight boundary has been enforced, and some chapters add more general mathematical or philosophical foundations or links to current trends in computer science. The theme of this book lies at the interface of many disciplines. Logic is the main methodology, but the various chapters cross easily between mathematics, computer science, philosophy, linguistics, cognitive and social sciences, while also ranging from pure theory to empirical work. Accordingly, the authors of this book represent a wide variety of original thinkers from different research communities. And their interconnected themes challenge at the same time how we think of logic, philosophy and computation. Thus, very much in line with van Benthem's work over many decades, the volume shows how all these disciplines form a natural unity in the perspective of dynamic logicians (broadly conceived) exploring their new themes today. And at the same time, in doing so, it offers a broader conception of logic with a certain grandeur, moving its horizons beyond the traditional study of consequence relations.
