*Multiplication Worksheets* Andrew Williams, 2014-12-03 *Multiplication Tables - Practice with printable multiplication table drills* When I was in the last year of primary school, my teacher gave the whole class a multiplication test every Friday morning. The test consisted of 100 questions on the 1 - 12 times tables and we had 5 minutes to complete the test. 5 minutes may not sound like a lot if you are unfamiliar with the tables, but we completed the test easily within the time limit, and a large number of the 10 and 11 year olds in the class got 100 out of 100. The times tables were a vital part of our studies, and knowing them inside out kept us in good stead for the years of schooling to

follow. Those same math skills have been useful to me ever since, and although I am now 48 years old, I still know them off by heart and can give you an immediate, reflex answer to any of the 12 times tables. Back in the day, we learned by rote. That is, we learned the tables by repeating them out loud until they rolled off the tongue instinctively. Today, rote learning has largely been replaced by fancy games designed by teachers who want to make learning fun. Those games might work, but so does rote learning and that is how I am teaching my own kids to learn the tables. This book provides a large number of table tests (with answers) to gauge your child's progress. They start off with the 1 and 2 times tables and work up to the 12 times table. There are tests that just include a single times table, while others combine 2, 3, 4 or more tables into a single test. The variety of tests means you can gradually increase the difficulty and range of the tests as your children learn more of the tables. The first half of the book has the standard X times Y Equals type question, whereas the second half of the book takes the pace up a notch to include fill in the blanks.

**How to Use this Book** Ultimately, how your kids learn their tables is up to you, or the teacher. Personally, I would get the kids to learn a table by rote. 1 times 7 is 7 2 times 7 is 14 3 times 7 is 21 4 times 7 is 28 , and so on. Get them to repeat the tables over and over again. They can look at the tables as they start the process, but after a few repetitions, remove the printed copy of the tables and they'll find they can repeat the tables easily from memory. Once a table has been learned, give your child a test for that table. Each test in this book comes with an answer sheet, though as a parent (or teacher), you should really be able to mark these without the answers ;) When they've learned two sets of tables, give them a test that combines both of those tables into a single test. As more and more tables are learned, give them progressively more difficult tests to complete. The ultimate goal should be to get your children answering 100 questions from all 12 times tables, within a 5 minute period. When they

can do that, they will be well set for their future studies, and life after school. The tests in this book can be photocopied (most home printers can do that), or your child can use the book as a workbook, filling in the answers directly. The answers each tests in on the reverse side of the test. Give your child the gift of maths. Help them learn their tables.

Drill Multiplication Times Tables With Rhymes Jeanne Lorraine Cerisano, 2019-07-25 The traditional method of drilling the math facts into memory by simply seeing, saying, writing and hearing the problem repeatedly is indeed, still the more gracious way, to be allowed to learn multiplication; but with this workbook it becomes the best way!! A picture can be worth a thousand words. So many beautiful photos are provided for the word problems. Memorizing 144 unrelated math facts can seem like a monstrous job. So this workbook focuses on just the tougher ones from the 6xs, 7xs, 8xs and 9xs which might otherwise make or break a person's lifelong passion for math. This workbook provides extra help for those students who are struggling to remember them all.

Teach Your Child the Multiplication Tables, Fast, Fun and Easy Eugenia Francis, 2013-06-05 Teach Your Child the Multiplication Tables - 2nd Edition Like most third graders, my son found learning the multiplication tables through rote memorization a challenge. After an afternoon of tiresome drills, I knew there had to be a better way! I drew a grid for tables 1-10. Not surprisingly, Scott knew tables 1, 2, 5 and 10, the tables with easy patterns. Well, then, why not find patterns for the rest of the tables? Tables for EVEN numbers 2, 4, 6 and 8, we discovered, end in some combination of 2-4-6-8-0 and are easy to learn. Tables for ODD numbers, we found, also have distinct

patterns. Patterns made Scott smile. He could see the underlying structure and knew he got it right. The traditional method of learning one math fact at a time, such as  $8 \times 6 = ?$ , is not only difficult but highly inefficient. Rote memorization is passive and mechanical. Students typically find it boring. Why not learn one pattern for the entire table? Discovering patterns is active, creative and engaging. The essence of mathematics is patterns. Learning to recognize patterns at an early age develops analytical skills. Patterns greatly benefit children with special needs, such as those with ADD/ADHD, autism and dyslexia. They can better recall and visualize the table when they see a pattern. This is true for all children. Patterns aid recall. My workbook utilizes both left and right-brain strategies to teach multiplication. There are marked differences between children who are left-hemisphere dominant and those who are right dominant. Whereas the left-hemisphere dominant child can construct the whole from the parts, the right dominant prefers the big picture, seeing patterns and making connections. Special needs children are often right-brain dominant. Learning the multiplication tables is much easier when both hemispheres are engaged. It is the responsibility of parents and teachers to ensure children learn the multiplication tables. Without them a child will not progress beyond third grade math. Fractions, decimals, percentages and algebra will be beyond a child's reach. In California, the number one reason students do not graduate from high school is failure to pass algebra. A leading cause is: failure to master the times tables! It is a national disgrace that fifteen-year olds in the U.S. rank near the bottom of industrialized nations in math skills. We must reverse this alarming trend. The time to intervene is in the third grade. Teachers, why not a more effective approach to the multiplication tables than the drill and kill of rote memorization? Why not bring the magic of math into the classroom? If all third graders were to genuinely like math, they would be more likely to succeed in school. Parents too must do their part. Parents have a huge

influence over a third grader. By high school it may be too late. Mastery of the multiplication tables is essential to your child's future. The goal of this workbook is not only multiplication mastery for all children but to instill in them a love of numbers and fascination with math.
