Origins and Futures: Time Inflected and Reflected Raji C. Steineck, Claudia Clausius, 2013-05-16

Origins and Futures: Time Inflected and Reflected offers an interdisciplinary approach to two fundamental often opposing concepts of time. The volume features both research on specific texts and authors as well as conceptual disciplinary reflections in the spirit of an integrated study of time.

*The Sociology of Time* Jiří Šubrt, 2021-10-26 In a critical, comparative study of the sociological literature, this book explores the term "time," and the various interconnections between time and a broad cluster of topics that create a conceptual labyrinth. Various understandings of time manifest themselves in the context of many individual social problems—there is no single vision in sociology of how to grasp time and address within social theory. This book, therefore, attempts to define an approach to the concept of time and its associated terms (duration, temporality, acceleration, compression, temporal structures, change, historical consciousness, and others). The volume is guided by a critical engagement with three main questions: a) the formation of human understanding of time; b) the functioning of temporal structures at different levels of social reality; c) the role and place of time in general sociological theory.

**Time and Space Weight and Inertia** A. D. Fokker, 2013-09-17 Time and Space Weight and Inertia covers the relationship between time, space weight, and inertia using the principles of theory of relativity and chronogeometry. This book is composed of 12 chapters, and begins with a brief overview of the fundamental aspects of space and time within events. The subsequent chapters deal with the chronogeometry of time and space, and the concept of the Lorentz transformations and pseudo-revolutions. These topics are followed by discussions on the dynamical relationships of metric and other tensors and a presentation of the equations of the theory of electrons. The remaining chapters describe the unique value of the acceleration in free fall, geodesic coordinates carried along in free fall, and the field equations, as well as the so-called curving of light rays. This book will prove useful to physicists and mathematicians.

It's about time Joost Schilperoord, 2022-03-07 A central issue of cognitive studies of text production is What goes on in people's minds when they produce a text?, How do they plan the text?, How do they decide in what order to express their thoughts? In this volume, writers are followed in their footsteps during the moment-to-moment process of producing routine business letters. Their writing processes are explored in real time with the ultimate goal to contribute to a cognitive theory of text production. Such a theory should tell what kind of mental structures underly text production, how these structures are converted into coherent texts, and how this process is framed within real writing time. The study starts from a large corpus of real-life text production processes. It combines methods to explore both process and product of text production. Processes are described by analyzing the pause patterns that emerge in the course of writing. Products are described by analyzing their hierarchical structure. Together, these descriptions yield several significant insights in the real time organization of cognitive processes in production. The study can be characterized as a cognitive linguistic approach to text production. This volume will be of special interest to researchers in the field of (psycho-)linguistics, textlinguistics and cognitive science.

*The Time Machine Hypothesis* Damien Broderick, 2019-07-12 Every age has characteristic inventions that change the world. In the 19th century it was the steam engine and the train. For the 20th, electric and gasoline power, aircraft, nuclear weapons, even ventures into space. Today, the planet is awash with electronic business, chatter and virtual-reality entertainment so brilliant that the division between real and simulated is hard to discern. But one new idea from the 19th century has failed, so far, to enter reality—time travel, using machines to turn the time dimension into a two-way highway. Will it come true, as foreseen in science fiction? Might we expect visits to and from the future, sooner than from space? That is the Time Machine Hypothesis, examined here by futurist Damien Broderick, an award-winning writer and theorist of the genre of the future. Broderick homes in on the topic through the lens of science as well as fiction, exploring some fifty different time-

travel scenarios and conundrums found in the science fiction literature and film.

Engineering Modeling and Design William L. Chapman,A. Terry Bahill,A. Wayne

Wymore,2018-02-06 Engineering Modeling and Design is a comprehensive systems engineering text that focuses on systematic principles for designing systems. Concurrent engineering, which requires that from the very start of a project all players (e.g., engineering, maintenance, marketing, customers) are involved as all facets of the system life cycle are considered, is skillfully illustrated through the use of two major case studies. The text describes how a product design proceeds parallel to the process design, explains key duties of systems engineers throughout the product life cycle, and examines the process of system design in terms of life cycle requirements. Projects and problems are presented throughout the text. A homework solutions/instructor's manual is available from the publisher upon request. Engineering Modeling and Design is an excellent text for engineering design courses in industry and upper division courses on concurrent engineering or total quality management.

**Proceedings of PIANC Smart Rivers 2022** Yun Li,Yaan Hu,Philippe Rigo,Francisco Esteban Lefler,Gensheng Zhao,2023-02-25 This book is a compilation of selected papers from the 10th PIANC Smart Rivers Conference (Smart Rivers 2022). The work focuses on novel techniques for inland waterways and navigation structures. The contents make valuable contributions to academic researchers, engineers in the industry, and regulators of aviation authorities. As well, readers will encounter new ideas for realizing Green Waterways and Sustainable Navigations. This is an open access book.

*Software-Based Acoustical Measurements* Federico Miyara,2017-05-26 This textbook provides a detailed introduction to the use of software in combination with simple and economical hardware (a sound level meter with calibrated AC output and a digital recording system) to obtain sophisticated measurements usually requiring expensive equipment. It emphasizes the use of free, open source, and multiplatform software. Many commercial acoustical measurement systems use software algorithms as an integral component; however the methods are not disclosed. This book enables the reader to develop useful algorithms and provides insight into the use of digital audio editing tools to document features in the signal. Topics covered include acoustical measurement principles, in-depth critical study of uncertainty applied to acoustical measurements, digital signal processing from the basics, and metrologically-oriented spectral and statistical analysis of signals. The student will gain a deep understanding of the use of software for measurement purposes; the ability to implement software-based measurement systems; familiarity with the hardware necessary to acquire and store signals; an appreciation for the key issue of long-term preservation of signals; and a full grasp of the often neglected issue of uncertainty in acoustical measurements. Pedagogical features include in-text worked-out examples, end-of-chapter problems, a glossary of metrology terms, and extensive appendices covering statistics, proofs, additional examples, file formats, and underlying theory.

**Mothers on the Fast Track** Mary Ann Mason,Eve Mason Ekman,2007-06-18 In the past few decades the number of women entering graduate and professional schools has been going up and up, while the number of women reaching the top rung of the corporate and academic worlds has remained relatively stagnant. Why are so many women falling off the fast track? In this timely book, Mary Ann Mason traces the career paths of the first generation of ambitious women who started careers in academia, law, medicine, business, and the media in large numbers in the 1970s and '80s. Many women who had started families but continued working had ended up veering off the path to

upper management at a point she calls the second glass ceiling. Rather than sticking to their original career goals, they allowed themselves to slide into a second tier of management that offers fewer hours, less pay, lower prestige, and limited upward mobility. Men who did likewise--entered the career world with high aspirations and then started families while working--not only did not show the same trend, they reached even higher levels of professional success than men who had no families at all. Along with her daughter, an aspiring journalist, Mason has written a guide for young women who are facing the tough decision of when--and if--to start a family. It is also a guide for older women seeking a second chance to break through to the next level, as Mason herself did in academia. The book features anecdotes and strategies from the dozens of women they interviewed. Advice ranges from the personal (know when to say no, the importance of time management) to the institutional, with suggestions for how the workplace itself can be changed to make it easier for ambitious working mothers to reach the top levels. The result is a roadmap of new choices for women facing the sobering question of how to balance a successful career with family.
