Monsters Ed Regis, 2015-09-08 Radio reporter Herbert Morrison's words on witnessing the destruction of the Hindenburg ("Oh, the humanity!") are etched in our collective memory. Yet while we use the Hindenburg—like the Titanic—as shorthand for the technological hubris of a bygone era, we seem to have forgotten the lessons to be learned from the infamous 1937 zeppelin disaster. In *Monsters: The Hindenburg Disaster and the Birth of Pathological Technology*, Ed Regis claims that this is due to the fact that never before has there been a technological artifact so discredited as the zeppelin in the aftermath of the Hindenburg fire. In *Monsters*, Regis explores the question of how a technology now so completely invalidated (and so fundamentally unsafe) ever managed to reach such a high-risk level of development as it did. How does such a collective psychology of obsession emerge? Through the narrative of the invention and development of the zeppelin and its most infamous example, Regis will examine the perils of what he calls "pathological technologies," technologies whose substantial risks are discounted or ignored under the influence of their emotional, almost mystical appeal. Zeppelins were unsteerable balloons of highly flammable gas, but the sheer magic of seeing a behemoth aircraft float lighter-than-air cast a spell over anyone who saw them. The Hindenburg, however, is not an isolated historical instance of pathological technologies—Regis brings this idea to the present by discussing more recent examples, including recombinant DNA technology, genetic engineering, nuclear energy, the Apollo 11 moon landings, and DARPA's "100-Year Starship" program. These technologies may appear enticing, but like the Hindenburg, they could prove to be just as

perilous. Monsters is thus a powerful cautionary tale for future technologies and other grandiose schemes.

Substance Use Disorder Treatment for People With Co-Occurring Disorders (Treatment Improvement Protocol) TIP 42 (Updated March 2020)
U.S. Department of Health and Human Services, 2020-04-04
This Treatment Improvement Protocol (TIP) update is intended to provide addiction counselors and other providers, supervisors, and administrators with the latest science in the screening, assessment, diagnosis, and management of co-occurring disorders (CODs). For purposes of this TIP, CODs refer to co-occurring substance use disorders (SUDs) and mental disorders. Clients with CODs have one or more disorders relating to the use of alcohol or other substances with misuse potential as well as one or more mental disorders. A diagnosis of CODs occurs when at least one disorder of each type can be established independent of the other and is not simply a cluster of symptoms resulting from the one disorder. Many may think of the typical person with CODs as having a serious mental illness (SMI) combined with a severe SUD, such as schizophrenia combined with alcohol use disorder (AUD).

Drawdown Paul Hawken, 2017-04-18 • New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world "At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope." —Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming* "There's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There

remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, Vox “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.
