Adriana Cordova, Alessandro Innocenti, Francesca Toia, Massimiliano Tripoli

The Remarkable Developments of Heart and Chest Surgery in the 20th Century Armand A. Lefemine MD, 2014-12-30 The author is a board-certified thoracic and heart surgeon who studied and learned the craft of thoracic surgery under one of the great pioneers in the development of heart surgery. The rapid multiplication of heart and lung operations as well as the diagnostic tools and the mechanical, electrical, and chemical means to support life during surgery is a story that needs to be told. It is not an uncomplicated story but one that is easy to appreciate particularly if you are one of those who benefited and thousands did. The table of contents gives some idea of the impressive extent of the blossoming of thoracic surgery particularly in the last fifty years of the twentieth century.

Plastic and Cosmetic Surgery of the Male Breast Adriana Cordova, Alessandro Innocenti, Francesca Toia, Massimiliano Tripoli, 2020-01-31 The thorax has a fundamental role in the aesthetic of the male body: congenital or acquired alterations are experienced as extremely frustrating clinical situations. Most breast surgery texts briefly mention gynecomastia, but no text comprehensively addresses the male breast and thorax, including reconstructive and cosmetic surgery and surgery in transgender patients. This gap is now thoroughly filled by *Plastic and Cosmetic Surgery of the Male Breast*: after introducing principles of anatomy and aesthetics for the male thorax, the first part focusses on the main congenital malformations and their treatment; the main benign acquired pathologies and their treatment (including an ample section dedicated to gynecomastia), the carcinoma of the male breast, with reference to familiar forms; the treatment of carcinoma and reconstruction of the thorax. The book closes with a chapter dedicated to breast surgery in transgender patients. While female breast surgery is increasingly practiced in specific Breast Units and highly specialized centers, male breast issues are treated in general and plastic surgeries units. This handy volume is a sound reference for the most complex clinical cases, and the latest reconstruction treatments for the male thorax and will be useful for general and thoracic surgeons, plastic surgeons and senologists.

Difficult Decisions in Thoracic Surgery Mark K. Ferguson, 2014-06-16 The complexity of decision making in thoracic surgery is growing exponentially. As new technology is introduced, physicians from nonsurgical specialties offer alternative and competing therapies for what was once the exclusive province of the thoracic surgeon. In addition, there is increasing knowledge regarding the efficacy of traditional thoracic surgical therapies. How to select among these varied and complex approaches is becoming increasingly difficult. The first two editions of this book have found wide acceptance among practicing surgeons, trainees, and educators. Chapters from them are regularly cited by the Thoracic Surgery Directors Association as valuable resources for their weekly curriculum exercises. As in the first two editions, chapters adhere to a specific format (updated for the third edition). This approach provides uniformity to the presentations, making it possible to identify useful material at a glance.

Plastic Surgery for the Oncological Patient Björn Behr, Adrien Daigeler, 2016-09-26 The development of plastic surgery techniques allows for preserving and reconstruction of function after resection of malignant tumors. From

split thickness skin grafts to pedicled and free tissue transfer multiple techniques are at hand to restore body integrity. Sufficient soft tissue coverage allows for adjuvant radiation therapy or can cure its sequelae. Nerve, tendon and muscle transfers are used to regain motor function of the extremities. Even large bony defects can be treated by microsurgically transferring fibula, pelvic and femoral bone. In case main vessels need to be resected reconstruction is possible with autologous and artificial grafts. By means of plastic surgery thoracic and abdominal defects can be covered so that foremost unresectable tumors become curable. Unfortunately the knowledge of these techniques is not very popular with oncologic surgeons. Therefore we suggest as a clinical topic the role of reconstructive surgery in the multimodal treatment of oncologic patients. The focus will be on different areas of the body, therefore articles for reconstructional procedures at the head, the extremities, the trunk, the thoracic wall, the breast, and the foot will be invited. Another focus will be the role of reconstructive procedures in the multimodal treatment concept consisting of radiation and chemotherapy as well. By knowing and applying the opportunities of plastic surgery the quality of life of the oncologic patient can be significantly improved.
