Nanomaterial Biointeractions at the Cellular, Organismal and System Levels

Nilesh Sharma, Shivendra Sahi, 2021-03-26 The range of nanomaterial applications has expanded recently from catalysis, electronics, and filtration to therapeutics, diagnostics, agriculture, and food because of unique properties and potentials of different nanoparticles and nanomaterials. Research shows that these exquisite particles can interact with an organism at the cellular, physiological, biochemical, and molecular levels. However, our knowledge of how they affect these changes, selectively or generally, in diverse organism or ecosystems is very limited and far from satisfactory. Data indicate that the biological function largely depends on the shape, size, and surface characteristics of the nanoparticles used besides life cycle stages of an organism. Therefore, this compilation will focus on the body of work carried out by distinguished investigators using diverse nanomaterials and plant and animal species. This book includes specific case studies as well as general review articles highlighting aspects of multilayered interactions, and targets not only research and academic scholars but also the concerned industry and policy makers as well.

Twenty-first Interim Report of the Committee on Acute Exposure Guideline Levels National Research Council, Board on Environmental Studies and Toxicology, Committee on Toxicology, Committee on Acute Exposure Guideline Levels, 2012-01-01 Extremely hazardous substances (EHSs) can be released accidentally as a result of chemical spills, industrial explosions, fire, or accidents involving railroad cars or trucks transporting EHSs, or they can be released intentionally through terrorist activities. These substances can also be released by improper storage or handling. Workers and residents in communities surrounding industrial facilities where EHSs are manufactured, used, or stored and in communities along the nation's railways and highways

are potentially at risk of being exposed to airborne EHSs during accidental or intentional releases. As part of its efforts to develop acute exposure guideline levels for EHSs, the Environmental Protection Agency (EPA) and the Agency for Toxic Substances and Disease Registry (ATSDR) in 1991 requested that the National Research Council (NRC) develop guidelines for establishing such levels. In response to that request, the NRC published Guidelines for Developing Community Emergency Exposure Levels for Hazardous Substances in 1993. Subsequently, Standing Operating Procedures for Developing Acute Exposure Guideline Levels for Hazardous Substances was published in 2001. It provided updated procedures, methods, and other guidelines used by the National Advisory Committee (NAC) on Acute Exposure Guideline Levels (AEGLs) in considering acute adverse health effects to develop AEGL values. Using both these reports, the NAC—consisting of members from the EPA, the Department of Defense (DOD), the Department of Energy (DOE), the Department of Transportation (DOT), other federal and state governments, the chemical industry, academia, and other organizations from the private sector—developed AEGLs for approximately 270 EHSs. Twenty-First Interim Report of the Committee on Acute Exposure Guideline Levels: Part A summarizes the committee's conclusions and recommendations for improving AEGL documents for several chemicals and chemical classes.

Pollution Assessment for Sustainable Practices in Applied Sciences and Engineering Abdel-Mohsen O. Mohamed, Evan K. Paleologos, Fares Howari, 2020-10-25 Pollution Assessment for Sustainable Practices in Applied Sciences and Engineering provides an integrated reference for academics and professionals working on land, air, and water pollution. The protocols discussed and the extensive number of case studies help environmental

engineers to quickly identify the correct process for projects under study. The book is divided into four parts; each of the first three covers a separate environment: Geosphere, Atmosphere, and Hydrosphere. The first part covers ground assessment, contamination, geo-statistics, remote sensing, GIS, risk assessment and management, and environmental impact assessment. The second part covers atmospheric assessment topics, including the dynamics of contaminant transport, impacts of global warming, indoor and outdoor techniques and practice. The third part is dedicated to the hydrosphere including both the marine and fresh water environments. Finally, part four examines emerging issues in pollution assessment, from nanomaterials to artificial intelligence. There are a wide variety of case studies in the book to help bridge the gap between concept and practice. Environmental Engineers will benefit from the integrated approach to pollution assessment across multiple spheres. Practicing engineers and students will also benefit from the case studies, which bring the practice side by side with fundamental concepts. Provides a comprehensive overview of pollution assessment Covers land, underground, water and air pollution Includes outdoor and indoor pollution assessment Presents case studies that help bridge the gap between concepts and practice

Nanotoxicology Vineet Kumar, Nandita Dasgupta, Shivendu Ranjan, 2018-03-12 As the application of nanotechnology in the myriad disciplines of science and engineering--from agriculture, pharmaceuticals, material science, and biotechnology to sensors, electronics, and mechanical and electrical engineering--brings benefits it also can produce serious threats to human health and the environment that must be evaluated. The unique properties of nanomaterials make them different from their bulk counterparts. In addition

to such unique properties, the nanometric size of nanomaterials can invite some detrimental effects on the health and well-being of living organisms and the environment. Thus, it is important to distinguish nanomaterials with such ill effects from nanomaterials with no or minimum toxicity. Nanotoxicology: Toxicity Evaluation, Risk Assessment and Management covers issues such as the basic principles of nanotoxicity, methods used for nanotoxicity evaluation, risk assessment and its management for nanomaterial toxicity with a focus on current trends, limitations, challenges, and future directions of nanotoxicity evaluation. Various experts from different countries discuss these issues in detail in this book. This will be helpful to researchers, educators, and students who are interested in research opportunities for avoiding the environmental and health hazards of nanomaterials. This book will also be useful for industrial practitioners, policy makers, and other professionals in the fields of toxicology, medicine, pharmacology, food, drugs, and other regulatory sciences.

Cellular and Molecular Toxicology of Nanoparticles Quaiser Saquib, Mohammad Faisal, Abdulaziz A. Al-Khedhairi, Abdulrahman A. Alatar, 2018-02-16 This edited book is a compilation of findings on the molecular and cellular toxicity of nanoparticles (NPs) in animal cell, human cells, invertebrates. The varied selection of test models will provide better understanding about the horizon of NPs toxicity. Interaction of NPs with cells and its organelles can induce toxicological consequences, including transcriptional and translational alterations, DNA damage, cytotoxicity, oxidative stress, mitochondrial dysfunction and cell death. NPs can get internalized in cells through phagocytosis, macropinocytosis, receptor-mediated endocytosis and passive penetration, which can affect varied cell types. Readers will be benefited

with the compilations on basic and molecular facet of NPs toxicity. The chapters will provide a comprehensive information on the state-of-the-art methodologies. The application of toxicogenomic approaches, which is already established in nanotoxicology, has been given special consideration to unravel the toxicodynamics of nanomaterials. Among these approaches, the high-throughput RNA sequencing (RNA-Seq), which is able to build a complete map of transcriptome across different cell types and perturbations upon NPs exposure has been included. The readers are also introduced to the less studied topic on the adsorption of biomolecules (mainly proteins) on the NPs surface, constituting the so-called “biomolecular corona”. The book has been designed for scientists engaged in NPs toxicity research. Nonetheless, it should be of interest to a variety of scientific disciplines including marine biology, environmental pollution, genetics, pharmacology, medicine, drug and food material sciences, consumer products. Also, the compilations will be of interest to the environmental watchdogs, federal regulators, risk assessors and the policy makers.

Nanotechnology Environmental Health and Safety Matthew Hull, Diana Bowman, 2018-08-14 Nanotechnology Environmental Health and Safety tackles - in depth and in breadth - the complex and evolving issues pertaining to nanotechnology's environmental health and safety (EHS). The chapters are authored by leaders in their respective fields, providing thorough analysis of their research areas. The diverse spectrum of topics include nanotechnology EHS issues, financial implications, foreseeable risks including exposure, dosage and hazards, and the implications of occupational hygiene precautions and consumer protections. The book includes real-world case studies, wherever practical, to illustrate specific issues and scenarios

encountered by stakeholders positioned on the front-lines of nanotechnology-enabled industries. These case studies will appeal to, and resonate with, laboratory scientists, business leaders, regulators, service providers, and postgraduate researchers. Reviews toxicological studies and industrial initiatives, supported by numerous case studies Covers new generation of nanoparticles and significantly expands on existing material from second edition Only edited volume to collect research on the regulatory and risk implications of a wide array of industrial, environmental and consumer nanomaterials

Adverse Effects of Engineered Nanomaterials Bengt Fadeel, Antonio Pietroiusti, Anna A. Shvedova, 2012-01-25 Adverse Effects of Engineered Nanoparticles: A Disease-Oriented Approach provides a systematic evaluation of representative engineered nanomaterial (ENM) of high volume production and of high economic importance. Each class of nanomaterials discussed includes information on what scientists, industry, regulatory agencies and the general public need to know about nanosafety. This book, written by leading international experts in nanotoxicology and nanomedicine, gives a comprehensive view of the health impact of ENM, focusing on their potential adverse effects in exposed workers, consumers and patients. The beneficial applications, both diagnostic and therapeutic, of ENM are also highlighted. This book fills an important need in terms of bridging the gap between experimental findings and human exposure to ENM, and the clinical and pathological consequences of such exposure in the human population. Multi-authored book written by leading US and European experts on nanotoxicology and nanomedicine Discusses the health implications and a clinical translation of experimental data in this area Takes a schematic, non-exhaustive approach

to summarize the most important research data in this field Includes a glossary, with a brief explanation of the term and with a reference to where the term or phrase has been used will be included within the book

Air Pollution Studies G Passerini, C. Borrego, J. Longhurst, M. Lopes, J. Barnes, 2020-05-18 Air pollution issues remain one of the most challenging problems facing society. This wide-ranging collection of high-quality works contains valuable research on issues related to the modelling, monitoring and management of air pollution. The papers included in this book develop the fundamental science of air pollution. Scientific knowledge derived from well-designed studies needs to be allied with further technical and economic studies in order to ensure cost-effective and efficient mitigation. Increasingly, it is being recognised that the outcome of such research needs to be contextualised within well-formulated communication strategies that help policymakers and citizens to understand and appreciate the risks and rewards arising from air pollution management. Details of the widespread nature of the air pollution phenomena and in-depth explorations of their impacts on human health and the environment are covered in this book.

Documents and Their Scientific Examination Charles Ainsworth Mitchell, 1922
From the PREFACE. THE scientific examination of documents as a branch of forensic chemistry has been strangely neglected, and hitherto there has been no work dealing fully with the subject from all points of view. The present book is based upon personal experience extending over many years, and includes the results of a great variety of investigations on such subjects as the composition and behavior of inks, pencil pigments, sealing wax, and other writing materials in connection with their use upon documents. Some of these results have been communicated to scientific societies and subsequently published in their journals, and so have had the advantage of being discussed and criticized by experts in the respective subjects. The questions of the materials upon which the writing, typing or printing appears, of handwriting, of finger-prints, photography and microscopical examination are all inseparably connected with the scientific examination of documents; and these I have dealt with in due proportion to the whole subject, bearing in mind works already available. For the purpose of presenting expert evidence in legal cases, criminal charges, the investigation of anonymous letters, and the like, such studies are of material importance, and, as little information on the chemical questions involved was available, I had to make prolonged laboratory experiments to obtain trustworthy results, and these records should prove of service to others. In connection with the chemical examination of documents I am privileged to make use of numerous details of cases and observations recorded by Mr. A. Lucas, Director of the Government Laboratory, Cairo, whose excellent work on Forensic Chemistry contains short sections on the subject. My best thanks are also due to Mr. A. E. Osborn of New York for valuable information kindly sent to me, and for several

illustrations, as well as for permission to quote from his standard work Questioned Documents.
