Cultivated Christin Geall, 2020-03-24 *Cultivated: The Elements of Floral Style* elevates floral design to fine art in this richly informative work on the principles of floral style. A charming and intelligent mentor, Christin Geall emboldens designers, gardeners, and entrepreneurs to think differently and deeply about their work with flowers as she draws upon the fine arts and historical sources, exploring Baroque music, the paintings of the Impressionists, or the work of floral innovators like Gertrude Jekyll and Constance Spry. Covering all aspects of floral design, including choosing plants to grow and arrange, selecting tools and vessels, balancing color and form, and even photographing and selling arrangements, *Cultivated* offers universal lessons for all levels of practitioners, budgets, and materials. Geall's stunning photographs of her own lush designs illustrate techniques for creating brilliant arrangements that spark the imagination.

After Effects Apprentice Chris and Trish Meyer, 2012-09-10 If you're new to After Effects and want to get up to speed quickly, *After Effects Apprentice* was created just for you. With 11 core lessons plus a fun final project, you'll quickly get into the program and learn how to tap its potential - whether you want to create motion graphics for a network program, your company's video, or your own independent production. In this book, you'll get a professional perspective on the most important features a motion graphics artist needs to learn to use this program effectively. You'll learn to creatively edit and combine layers, animate eye-catching titles, replace a screen on a computer monitor, place a studio shot in a new environment, manipulate 3D space, and use effects to generate excitement or enhance the realism of a scene. Easy to follow step-by-step instructions take you through each technique, including projects that encourage you to express it in your own way. You'll learn more than just the tools; you'll learn skills that you

can immediately put to work in your own projects. Topics include how to: * Animate, layer, and composite images and text. * Manipulate keyframes to create more refined animations. * Use masks, mattes, stencils and modes to add depth. * Manage layers to make them easier to coordinate. * Add 3D to your animations. * Use tracking and keying to create special effects. * Includes new CS3 features; Shape layers, the Puppet tool, Brainstorm, and Per-Character 3D Text. DVD contains: All exercise source material and projects in AE7 and CS3, video guided tours, and movies of the finished projects.

Designer Scrapbooks with Anna Griffin Anna Griffin, 2004 She's a scrapbooking celebrity, and now Anna Griffin, the well-known designer of stationery, invitations, and decorative papers, shares her ideas and insights with all crafters. Every image in this colorful compilation was inspired by cherished family traditions and the personal stories Anna has collected from scrapbookers everywhere; and every layout features a unique technique, embellishment, and palette to make it truly celebratory. From birthday traditions (such as a beautiful "strawberry pink" cake page in honor of Anna's mother) to family vacation postcards, there's something special for every occasion. The many memorable moments so beautifully commemorated include Easter (tabs reveal hidden photos), weddings (with a folded pocket for keeping love letters), and New Year's "champagne wishes."

Wondrous One Sheet Origami Meenakshi Mukerji,2019-09-20 Wondrous One Sheet Origami is a how-to book full of beautiful origami designs covering a wide range of folding levels from simple to high intermediate, with more emphasis on the latter. The book is meant for audiences 12 years of age and above, and children folding at higher than age level. Most of the designs are flat and suitable for mounting on cards or framing as gifts. Features • Richly illustrated full-color book with clear, crisp diagrams following international standard, and an abundance of photographs of finished models • Select designs hand-picked by the author based on social media responses • Most of the designs incorporate color-change, a technique showing both sides of paper for enhanced beauty Meenakshi Mukerji's work is both intricate and lovely. She's greatly respected in the origami world, one of the well-known world leaders in modular origami. Her books offer a nice exposition of the mathematical elements, but you're not being hit over the head with math

lessons. You learn things without even realizing that you have. –Dr. Robert J. Lang Meenakshi Mukerji is one of today's masters of modular origami, designs comprised of multiple pieces of paper. She also brings her ingenuity and creativity to designs made from a single piece of paper. Among the most appealing aspects of her single sheet work is the way she subtly manipulates a purely geometric form to fold a flower, a leaf, a butterfly, or card suits. –Peter Engel

Electronic String Art Stephen Erfle, 2024-02-20 String art is a well-known and popular activity that uses string, a board, and nails to produce artistic images (although there are variations that use different modalities). This activity is beloved because simple counting rules are used to create beautiful images that can both adorn walls and excite young minds. The downside of this highly tactile activity is that it is quite time-consuming and rigid. By contrast, electronic string art offers much more flexibility to set up or change nail locations and counting rules, and the images created from those changes change instantaneously. *Electronic String Art: Rhythmic Mathematics* invites readers to use the author's digital resources available on the ESA website to play with the parameters inherent in string art models while offering concise, accessible explanations of the underlying mathematical principles regarding how the images were created and how they change. Readers will have the opportunity to create visually beautiful works of art while learning concepts from geometry, number theory, and modular arithmetic from approximately 200 short-interdependent sections. Features Readers are able to drill-down on images in order to understand why they work using short (1 to 2 page) stand-alone sections Sections are lessons that were created so that they could be digested in a single sitting These sections are stand-alone in the sense that they need not be read sequentially but can be referred to based on images that the reader finds interesting An open-ended, inherently flexible teaching resource for elementary, middle, and high school-level mathematics The most mathematically challenging sections (or portions of a section) are designated MA and may not be accessible to elementary and middle school readers Will be appreciated by anyone interested in recreational mathematics or mathematical artworks even if the users are not interested in the underlying mathematics Includes exercises, solutions, and many online digital resources These QR codes take you to these digital resources. One takes you directly to the web version of the string art model (used as a starting point for teaching the parameters of the model in Section 25.5). The other takes you to the ESA web page with additional links to a variety of resources.

Facing the Other: Novel Theories and Methods in Face Perception Research Davide Rivolta, Aina Puce, Mark A Williams, 2016-04-08 We rely heavily on faces during social interactions. Humans possess the ability to recognise thousands of people very quickly and accurately without effort. The serious social difficulties that follow abnormalities of the face recognition system (i.e., prosopagnosia) strongly underline the importance of typical face skills in our everyday life. Over the last fifty years, research on prosopagnosia, along with research in the healthy population, has provided insights into the cognitive and neural features behind typical face recognition. This has also been achieved thanks to non-invasive neuroimaging techniques such as functional Magnetic Resonance Imaging (fMRI), Electroencephalography (EEG), Magnetoencephalography (MEG), Diffusion Tensor Imaging (DTI) and Transcranial Magnetic Stimulation (TMS). However, there is still much debate about the cognitive and neural mechanisms of face perception. In the current "Research Topic" we plan to gather experimental works, opinions, commentaries, mini-reviews and reviews that focus on new or novel theories and methods in face perception research. Where is the field at the moment? Do we need to re-think the experimental procedures we have adopted so far? Again, what kind of techniques (or combination of them) and analysis methods will be important in the future? From the experimental point of view we encourage both behavioural and neuroimaging contributions (e.g., fMRI, EEG, MEG, DTI and TMS). Despite the main emphasis on face perception, memory and identification, we will also consider original works that focus on other aspects of face processing, such as expression recognition, attractiveness judgments and face imagery. In addition, animal investigations and experimental manipulations that alter face recognition abilities in typical human subjects (e.g., hypnosis) are also welcome. Overall, we are proposing a Research Topic that looks at face processing using different perspectives and welcome contributions from different domains such as psychology, neurology, neuroscience, cognitive science and philosophy. The current "Research Topic" evolved over the desire to acknowledge the relatively recent loss of three giants in the field: Drs. Shlomo Bentin, Truett Allison and Andy Calder. We dedicate this "Research Topic" to them and their pioneering studies.

Content Computing Chi-Hung Chi, Kwok-Yan Lam, 2005-01-25 This book constitutes the refereed proceedings of the Advanced Workshop on Content Computing, AWCC 2004, held in Zhen Jiang, Jiang Su, China in November 2004. The 26 revised full papers and 36 revised short papers presented were carefully reviewed and selected from 194 submissions. The papers are organized in topical sections on mobile code and agent technology, content sharing and consistency management, networking infrastructure and performance, content aware security, multimedia content, content mining and knowledge extraction, Web services and content applications, content retrieval and management, and ontologies and knowledge conceptualization.
