Plant Specialized Metabolism Gen-ichiro Arimura, Massimo Maffei, 2016-10-26 Recent advances in science have clarified the role of plant specialized metabolites (classically known as plant secondary metabolites), which cannot be considered only bioactive molecules used for human health but also pivotal factors for the global ecosystem. They play major roles in plant life, evolution, and mutualism. To provide the reader a general view of plant specialized metabolites, it is important to consider both the biochemistry and the functional/ecological role of these important compounds. Around 200,000 specialized metabolites are formed by a wide array of plant metabolic pathways from numerous plant taxa and through learning how other species (including human beings) rely on them. *Plant Specialized Metabolism: Genomics, Biochemistry, and Biological Functions* will provide the reader with special insights into the sophisticated nature of these metabolites and their various and valuable uses based on the most recent findings in science. The field of plant specialized metabolism has witnessed tremendous growth in the past decade. This growth has had a profound impact on multiple disciplines in life science, including biochemistry, metabolism, enzymology, natural product chemistry, medicinal chemistry, chemical ecology, and evolution. It also has yielded valuable knowledge and technology readily applicable in various industries, such as agriculture, horticulture, energy, renewable chemicals, and pharmaceuticals. The book focuses on the molecular background of secondary metabolite biosynthesis, their functional role, and potential applications.

The Carrot Genome Philipp Simon, Massimo Iorizzo, Dariusz Grzebelus, Rafal Baranski, 2019-05-08 This book provides an up-to-date review and analysis of the carrot's nuclear and organellar genome structure and evolution. In addition, it highlights applications of carrot genomic information to elucidate the carrot's natural and agricultural history, reproductive biology, and the genetic basis of traits important in agriculture and human health. The carrot genome was sequenced in 2016, and its relatively small diploid genome, combined with the fact that it is the most complete root crop genome released to date and the first-ever Euasterid II genome to be sequenced, mean the carrot has an important role in the study of plant development and evolution. In addition, the carrot is among the top ten vegetables grown worldwide, and the abundant orange provitamin A carotenoids that account for its familiar orange color make it the richest crop source of vitamin A in the US diet, and in much of the world. This book includes the latest genetic maps, genetic tools and resources, and covers advances in genetic engineering that are relevant for plant breeders and biologists alike.

West Point Graduates and the United States Air Force Charles F.G. Kuyk, Jr., Charles F.G. Kuyk III, 2020-06-11 West Point graduates played a central role in developing U.S. military air and space power from the earliest days of mechanized flight through the establishment of the U.S. Air Force in 1947, and continuing through the Persian Gulf War. These graduates served at a time when the world's greatest wave of technological advancement occurred: in aviation, nuclear weapons, rocketry, ICBMs, computers, satellite systems in inner space and man in outer space. This history traces the advancement of weapons and space technology that became the hallmark of the U.S. Air Force, and the pivotal role that West Point graduates played in integrating them into a wide variety of Air Force systems and programs. Many became aircraft commanders, test pilots, astronauts and, later in their careers, general officers who helped shape and implement technologies still in use today.

Molecular Dynamics of Biomembranes Jos A.F. op den Kamp, 2013-06-29 Protein insertion and translocation, intracellular traffic and sorting of membranes and their components, and lipid-protein interactions were the main topics of the Advanced Study Institute on Molecular Dynamics of Membranes, which was held in June 1995 in Cargèse, Corsica, France. The course, co-sponsored by NATO and FEBS, was the fifth in a series that started in 1987 and takes place every two years in the Institut d'Etudes Scientifiques in Cargèse. This Institute, ideally situated and fully equipped for this type of scientific meeting has greatly contributed to the great success of the courses. Of course, also the outstanding contributions of a large number of well known scientists and the enthusiastic participation of excellent graduate students and postdocs has given the Cargèse Lectures on Biomembranes a firm reputation in the scientific community. The present proceedings is more than just a reflection on the information presented in the Course. First of all it contains a number of extensive reviews of specific areas of interest. Noteworthy are the articles dealing with: • the general mechanisms of protein transport, the roles of invariant chain in antigen presentation, protein import and export in *E. coli*, protein folding and the role of chaperones, chloroplast and mitochondrial protein import, • membrane traffic in general and during mitosis, and with respect to membrane lipids: lipid domain formation, lipases: an extensive review about structure and properties, phospholipase A2 and bioactive lipids, phospholipid transfer proteins, • phospholipid localization and mobility and, finally, new strategies for protein reconstitution.
