Evaluation of Rail Technology Dr Anjum Naweed,Dr Chris Bearman,Dr Jillian Dorrian,Ms Janette Rose,Professor Drew Dawson,2013-11-28 Rapid advancements in train control and in-cab technologies provide significant opportunities for rail operators to improve efficiency and enhance their operations. New technologies often provide elegant solutions to existing problems or new capabilities for the operator. However, new technologies may also represent a significant form of risk. Thus, it is important to balance the potential for significant improvement with justifiable concern about how the technology may unpredictably change the nature of the work. If a technology is designed and implemented without considering the substantive human factors concerns, that technology may lead to unintended consequences that can introduce safety issues and disrupt network performance. It is important to note that even a well-designed and beneficial technology may be rejected by the users who see it as a threat to their jobs, status or working conditions. This book discusses the issues surrounding rail technology and introduces a 'toolkit' of human factors evaluation methods. The toolkit provides a practical and operationally focused set of methods that can be used by managers considering investing in technology, staff charged with implementing a technology, and consultants engaged to assist with the design and evaluation process. This toolkit can help to ensure that new rail technologies are thoughtfully designed, effectively implemented, and well received by users so that the significant investment associated with developing rail technologies is not wasted.

Gaming Rhythms Tom Apperley,2011-06-16 Global gaming networks are heterogenous collectives of localized practices, not unified commercial products. Shifting the analysis of digital games to local specificities that build and perform the global and general, *Gaming Rhythms* employs ethnographic work conducted in Venezuela and Australia to account for the material experiences of actual game players. This book explores the materiality of digital play across diverse locations and argues that the dynamic relation between the everyday life of the player and the experience of digital game play can only be understood by examining play-practices in their specific situations. -- Website.

Game Physics Engine Development Ian Millington,2010-07-23 Physics is really important to game programmers who need to know how to add physical realism to their games. They need to take into account the laws of physics when creating a simulation or game engine, particularly in 3D computer graphics, for the purpose of making the effects appear more real to the observer or player.The game engine ne

Flying Scotsman Fred Kerr,Keith Langston,2016-11-30 Built at Doncaster works in 1923 the Nigel Gresley designed then-A1 class Pacific (4-6-2) first entered service as No 1472. The new locomotive did not receive a name until it was sent for display at a Wembley exhibition in 1924, and then

the name Flying Scotsman was chosen. The Legend was born. In 1928 the London North Eastern Railway (LNER) express steam locomotive hauled the first nonstop service from London to Edinburgh and in 1934 went on to break through the 100mph barrier. In addition to regularly hauling express trains for the LNER and later British Railways (BR), the Gresley steam icon has also traveled to, and worked passenger trains in, North America and Australia. Withdrawn by BR in January 1963 as BR No 60103, the locomotive was bought for preservation and soon became a regular sight on mainline specials and at preserved railways. The locomotive's history in preservation is an interesting if not chequered one, however stability is now assured as Flying Scotsman has rightly become a part of the national collection administered by the National Railway Museum (NRM). The excitement which surrounded the return to steam of Flying Scotsman in 2016, and the ongoing celebrity status afforded to the famous Gresley designed engine, are perchance confirmation of the fact that it is The World's Most Famous Steam Locomotive. The most famous phrase entered into locomotive preservation folklore when first broadcast by John Noakes, a BBC TV Blue Peter presenter. A great many words have been written about the engineering specification and in service performance of Flying Scotsman. Accordingly, this keepsake publication simply uses carefully selected images, dating from the BR steam era to the present day, to celebrate the Return of the Legend. This publication includes a selection of QR Codes with links to items of film footage.

Cyber-Physical Systems: Industry 4.0 Challenges Alla G. Kravets, Alexander A. Bolshakov, Maxim V. Shcherbakov, 2019-11-01 This book presents new findings in industrial cyber-physical system design and control for various domains, as well as their social and economic impacts on society. Industry 4.0 requires new approaches in the context of secure connections, control, and maintenance of cyber-physical systems as well as enhancing their interaction with humans. The book focuses on open issues of cyber-physical system control and its usage, discussing implemented breakthrough systems, models, programs, and methods that could be used in industrial processes for the control, condition assessment, diagnostics, prognostication, and proactive maintenance of cyber-physical systems. Further, it addresses the topic of ensuring the cybersecurity of industrial cyber-physical systems and proposes new, reliable solutions. The authors also examine the impact of university courses on the performance of industrial complexes, and the organization of education for the development of cyber-physical systems. The book is intended for practitioners, enterprise representatives, scientists, students, and Ph.D. and master's students conducting research in the area of cyber-physical system development and implementation in various domains.
