Speech-to-Speech Translation Yutaka Kidawara,Eiichiro

Sumita,Hisashi Kawai,2019-11-22 This book provides the readers with retrospective and prospective views with detailed explanations of component technologies, speech recognition, language translation and speech synthesis. Speech-to-speech translation system (S2S) enables to break language barriers, i.e., communicate each other between any pair of person on the globe, which is one of extreme dreams of humankind. People, society, and economy connected by S2S will demonstrate explosive growth without exception. In 1986, Japan initiated basic research of S2S, then the idea spread world-wide and were explored deeply by researchers during three decades. Now, we see S2S application on smartphone/tablet around the world. Computational resources such as processors, memories, wireless communication accelerate this computation-intensive systems and accumulation of digital data of speech and language encourage recent approaches based on machine learning. Through field experiments after long research in laboratories, S2S systems are being well-developed and now ready to utilized in daily life. Unique chapter of this book is end-2-end evaluation by comparing system's performance and human

competence. The effectiveness of the system would be understood by the score of this evaluation. The book will end with one of the next focus of S2S will be technology of simultaneous interpretation for lecture, broadcast news and so on.

IBM MASTOR SYSTEM: Multilingual Automatic Speech-to-speech Translator, 2006 In this paper, we describe the IBM MASTOR, a speech-to-speech translation system that can translate spontaneous free-form speech in real-time on both laptop and hand-held PDAs. Challenges include speech recognition and machine translation in adverse environments, lack of training data and linguistic resources for under-studied languages, and the need to rapidly develop capabilities for new languages. Another challenge is designing algorithms and building models in a scalable manner to perform well even on memory and CPU deficient hand-held computers. We describe our approaches, experience, and success in building working free-form S2S systems that can handle two language pairs (including a low-resource language).

Introduction to Google Translate Gilad James, PhD, Google Translate is a multilingual translation service provided by Google. It allows users to translate words, phrases, and entire documents between multiple languages. The service was launched in April

2006 and has since been constantly updated to provide more accurate translations. Initially offering translations in only two languages, Google Translate now supports over 100 languages. The translation process works by analyzing the text or document input by the user, breaking it up into smaller segments, and then using statistical algorithms to match these segments with translations from its database. Google Translate has been a helpful tool for people to communicate across different languages, whether it be for business or personal use. However, it must be noted that automated translations often carry a high risk of inaccuracies due to the complexities inherent in language and the nuances of different cultures and contexts. It is always recommended to use translations as a starting point, and then have a native speaker review and refine the language to ensure accuracy.

The Spoken Language Translator Manny Rayner, 2000-08-28

This book describes the Spoken Language Translator (SLT), one of the first major projects in the area of automatic speech translation.

A Linguistic Handbook of French for Translators and Language

Students Paul Boucher, 2018-04-03 A Linguistic Handbook of French for Translators and Language Students offers the reader an in-depth contrastive study of French and English based on recent

theories of linguistics and discourse analysis. At the same time it is a practical manual for the advanced language student or the translator with dozens of exercises in analyzing and translating French along with detailed corrections. Organized in three sections – Structure, Perspective and Coherence – the handbook first explores French word formation and syntax, then moves on to the use of tense and aspect, illocution and speech styles in various text types. Finally, problems concerning textual coherence and cohesion in both languages are discussed: anaphora and ellipsis, relevance and equivalence and information structure. Each chapter is followed by a list of suggested readings for further discussion and a detailed glossary at the end of the book explains all technical terms used. The handbook is designed to be used either as a textbook or for individuals working at home.

Translator Positioning in Characterisation Minru

Zhao, 2023-04-28 Applying Systemic Functional Linguistics (SFL) to Descriptive Translation Studies (DTS), to three translations of a classic Chinese text, Zhao proposes a new model for linking

translator positioning with translational norms in the target culture. Zhao combines the Appraisal model from SFL with a characterisation model to describe the role of translator positioning in character construction. Looking at three different translations of the classic Chinese novel *Luotuo Xiangzi*, she uses corpus tools to compare the opening and ending chapters of each translation, identifying textual patterns of translator positioning. She then analyses and compares the cover designs of the translated novels and reconstructs the translational norms governing the translator's positioning in characterisation. In doing so she contributes to DTS by developing a systematic and consistent framework to analyse verbal and visual elements in translated novels. Her multimodal analysis also provides insights into the broader patterns of translated language. An insightful read for scholars interested in both theoretical and empirical approaches to translation studies.

Incremental Speech Translation Jan W. Amtrup, 2003-06-26

Human language capabilities are based on mental procedures that are closely linked to the time domain. Listening, understanding, and reacting, on the one hand, as well as planning, formulating, and speaking, on the other, are performed in a highly overlapping manner, thus allowing inter human communication to proceed in a

smooth and fluent way. Although it happens to be the natural mode of human language interaction, incremental processing is still far from becoming a common feature of today's language technology. Instead, it will certainly remain one of the big challenges for research activities in the years to come. Usually considered difficult to a degree that renders it almost intractable for practical purposes, incremental language processing has recently been attracting a steadily growing interest in the spoken language processing community. Its notorious difficulty can be attributed mainly to two reasons: Due to the inaccessibility of the right context, global optimization criteria are no longer available. This loss must be compensated for by communicating larger search spaces between system components or by introducing appropriate repair mechanisms. In any case, the complexity of the task can easily grow by an order of magnitude or even more. Incrementality is an almost useless feature as long as it remains a local property of individual system components. The advantages of incremental processing can be effective only if all the components of a producer-consumer chain consistently adhere to the same pattern of temporal behavior.

The Way of the Linguist Steve Kaufmann, 2005-11 The Way of

The Linguist, A language learning odyssey. It is now a cliché that the world is a smaller place. We think nothing of jumping on a plane to travel to another country or continent. The most exotic locations are now destinations for mass tourism. Small business people are dealing across frontiers and language barriers like never before. The Internet brings different languages and cultures to our finger-tips. English, the hybrid language of an island at the western extremity of Europe seems to have an unrivalled position as an international medium of communication. But historically periods of cultural and economic domination have never lasted forever. Do we not lose something by relying on the wide spread use of English rather than discovering other languages and cultures? As citizens of this shrunken world, would we not be better off if we were able to speak a few languages other than our own? The answer is obviously yes. Certainly Steve Kaufmann thinks so, and in his busy life as a diplomat and businessman he managed to learn to speak nine languages fluently and observe first hand some of the dominant cultures of Europe and Asia. Why do not more people do the same? In his book The Way of The Linguist, A language learning odyssey, Steve offers some answers. Steve feels anyone can learn a language if they want to. He points out

some of the obstacles that hold people back. Drawing on his adventures in Europe and Asia, as a student and businessman, he describes the rewards that come from knowing languages. He relates his evolution as a language learner, abroad and back in his native Canada and explains the kind of attitude that will enable others to achieve second language fluency. Many people have taken on the challenge of language learning but have been frustrated by their lack of success. This book offers detailed advice on the kind of study practices that will achieve language breakthroughs. Steve has developed a language learning system available online at: www.thelinguist.com.

Fluent Forever Gabriel Wyner, 2014-08-05 NATIONAL BESTSELLER • For anyone who wants to learn a foreign language, this is the method that will finally make the words stick. “A brilliant and thoroughly modern guide to learning new languages.”—Gary Marcus, cognitive psychologist and author of the New York Times bestseller *Guitar Zero* At thirty years old, Gabriel Wyner speaks six languages fluently. He didn’t learn them in school—who does? Rather, he learned them in the past few years, working on his own and practicing on the subway, using simple techniques and free online resources—and here he wants to show

others what he's discovered. Starting with pronunciation, you'll learn how to rewire your ears and turn foreign sounds into familiar sounds. You'll retrain your tongue to produce those sounds accurately, using tricks from opera singers and actors. Next, you'll begin to tackle words, and connect sounds and spellings to imagery rather than translations, which will enable you to think in a foreign language. And with the help of sophisticated spaced-repetition techniques, you'll be able to memorize hundreds of words a month in minutes every day. This is brain hacking at its most exciting, taking what we know about neuroscience and linguistics and using it to create the most efficient and enjoyable way to learn a foreign language in the spare minutes of your day.

Verbmobil: Foundations of Speech-to-Speech Translation

Wolfgang Wahlster, 2013-04-17 In 1992 it seemed very difficult to answer the question whether it would be possible to develop a portable system for the automatic recognition and translation of spontaneous speech. Previous research work on speech processing had focused on read speech only and international projects aimed at automated text translation had just been terminated without achieving their objectives. Within this context, the German Federal Ministry of Education and Research (BMBF)

made a careful analysis of all national and international research projects conducted in the field of speech and language technology before deciding to launch an eight-year basic-research lead project in which research groups were to cooperate in an interdisciplinary and international effort covering the disciplines of computer science, computational linguistics, translation science, signal processing, communication science and artificial intelligence. At some point, the project comprised up to 135 work packages with up to 33 research groups working on these packages. The project was controlled by means of a network plan. Every two years the project situation was assessed and the project goals were updated. An international scientific advisory board provided advice for BMBF. A new scientific approach was chosen for this project: coping with the complexity of spontaneous speech with all its pertinent phenomena such as ambiguities, self-corrections, hesitations and disfluencies took precedence over the intended lexicon size. Another important aspect was that prosodic information was exploited at all processing stages.

Automatic Speech Translation Akira Kurematsu, Tsuyoshi Morimoto, 2023-03-31 Automatic Speech Translation introduces recent results of Japanese research and development in speech

translation and speech recognition. Topics covered include: fundamental concepts of speech recognition; speech pattern representation; phoneme-based HMM phoneme recognition; continuous speech recognition; speaker adaptation; speaker-independent speech recognition; utterance analysis, utterance transfer, utterance generation; contextual processing; speech synthesis and an experimental system of speech translation. This book presents the complicated technological aspects of machine translation and speech recognition, and outlines the future directions of this rapidly developing area of technology.

The Translator's Invisibility Lawrence Venuti, 2012-06-25 Since publication over ten years ago, *The Translator's Invisibility* has provoked debate and controversy within the field of translation and become a classic text. Providing a fascinating account of the history of translation from the seventeenth century to the present day, Venuti shows how fluency prevailed over other translation strategies to shape the canon of foreign literatures in English and investigates the cultural consequences of the receptor values which were simultaneously inscribed and masked in foreign texts during this period. The author locates alternative translation theories and practices in British, American and European cultures which aim to

communicate linguistic and cultural differences instead of removing them. In this second edition of his work, Venuti: clarifies and further develops key terms and arguments responds to critical commentary on his argument incorporates new case studies that include: an eighteenth century translation of a French novel by a working class woman; Richard Burton's controversial translation of the Arabian Nights; modernist poetry translation; translations of Dostoevsky by the bestselling translators Richard Pevear and Larissa Volokhonsky; and translated crime fiction updates data on the current state of translation, including publishing statistics and translators' rates. *The Translator's Invisibility* will be essential reading for students of translation studies at all levels. Lawrence Venuti is Professor of English at Temple University, Philadelphia. He is a translation theorist and historian as well as a translator and his recent publications include: *The Scandals of Translation: Towards an Ethics of Difference* and *The Translation Studies Reader*, both published by Routledge.

Advances in Empirical Translation Studies Meng Ji, Michael Oakes, 2019-06-13 Introduces the integration of theoretical and applied translation studies for socially-oriented and data-driven empirical translation research.

Automating Linguistics offers an in-depth study of the history of the mathematisation and automation of the sciences of language. In the wake of the first mathematisation of the 1930s, two waves followed: machine translation in the 1950s and the development of computational linguistics and natural language processing in the 1960s. These waves were pivotal given the work of large computerised corpora in the 1990s and the unprecedented technological development of computers and software. Early machine translation was devised as a war technology originating in the sciences of war, amidst the amalgamate of mathematics, physics, logics, neurosciences, acoustics, and emerging sciences such as cybernetics and information theory. Machine translation was intended to provide mass translations for strategic purposes during the Cold War. Linguistics, in turn, did not belong to the sciences of war, and played a minor role in the pioneering projects of machine translation. Comparing the two trends, the present book reveals how the sciences of language gradually integrated the technologies of computing and software, resulting in the second-wave mathematisation of the study of language, which may be called mathematisation-automation. The integration took on various

shapes contingent upon cultural and linguistic traditions (USA, ex-USSR, Great Britain and France). By contrast, working with large corpora in the 1990s, though enabled by unprecedented development of computing and software, was primarily a continuation of traditional approaches in the sciences of language sciences, such as the study of spoken and written texts, lexicography, and statistical studies of vocabulary.

How Does it Feel? Charlotte Bosseaux, 2007 Narratology is concerned with the study of narratives; but surprisingly it does not usually distinguish between original and translated texts. This lack of distinction is regrettable. In recent years the visibility of translations and translators has become a widely discussed topic in Translation Studies; yet the issue of translating a novel's point of view has remained relatively unexplored. It seems crucial to ask how far a translator's choices affect the novel's point of view, and whether characters or narrators come across similarly in originals and translations. This book addresses exactly these questions. It proposes a method by which it becomes possible to investigate how the point of view of a work of fiction is created in an original and adapted in translation. It shows that there are potential problems involved in the translation of linguistic features that

constitute point of view (deixis, modality, transitivity and free indirect discourse) and that this has an impact on the way works are translated. Traditionally, comparative analysis of originals and their translations have relied on manual examinations; this book demonstrates that corpus-based tools can greatly facilitate and sharpen the process of comparison. The method is demonstrated using Virginia Woolf's *To The Lighthouse* (1927) and *The Waves* (1931), and their French translations.

Is That a Fish in Your Ear? David Bellos, 2011-10-11 A New York Times Notable Book for 2011 One of The Economist's 2011 Books of the Year People speak different languages, and always have. The Ancient Greeks took no notice of anything unless it was said in Greek; the Romans made everyone speak Latin; and in India, people learned their neighbors' languages—as did many ordinary Europeans in times past (Christopher Columbus knew Italian, Portuguese, and Castilian Spanish as well as the classical languages). But today, we all use translation to cope with the diversity of languages. Without translation there would be no world news, not much of a reading list in any subject at college, no repair manuals for cars or planes; we wouldn't even be able to put together flat-pack furniture. *Is That a Fish in Your Ear?* ranges

across the whole of human experience, from foreign films to philosophy, to show why translation is at the heart of what we do and who we are. Among many other things, David Bellos asks: What's the difference between translating unprepared natural speech and translating Madame Bovary? How do you translate a joke? What's the difference between a native tongue and a learned one? Can you translate between any pair of languages, or only between some? What really goes on when world leaders speak at the UN? Can machines ever replace human translators, and if not, why? But the biggest question Bellos asks is this: How do we ever really know that we've understood what anybody else says—in our own language or in another? Surprising, witty, and written with great *joie de vivre*, this book is all about how we comprehend other people and shows us how, ultimately, translation is another name for the human condition.

Free Speech Timothy Garton Ash, 2016-05-24 Never in human history was there such a chance for freedom of expression. If we have Internet access, any one of us can publish almost anything we like and potentially reach an audience of millions. Never was there a time when the evils of unlimited speech flowed so easily across frontiers: violent intimidation, gross violations of privacy,

tidal waves of abuse. A pastor burns a Koran in Florida and UN officials die in Afghanistan. Drawing on a lifetime of writing about dictatorships and dissidents, Timothy Garton Ash argues that in this connected world that he calls cosmopolis, the way to combine freedom and diversity is to have more but also better free speech. Across all cultural divides we must strive to agree on how we disagree. He draws on a thirteen-language global online project—freespeechdebate.com—conducted out of Oxford University and devoted to doing just that. With vivid examples, from his personal experience of China's Orwellian censorship apparatus to the controversy around Charlie Hebdo to a very English court case involving food writer Nigella Lawson, he proposes a framework for civilized conflict in a world where we are all becoming neighbors.

A Voyage Round the World, 2 vols. George Forster, 2000-01-01 George Forster's *A Voyage Round the World* presents a wealth of geographic, scientific, and ethnographic knowledge uncovered by Cook's second journey of exploration in the Pacific (1772-1775). Accompanying his father, the ship's naturalist Johann Reinhold Forster, on the voyage, George proved a knowledgeable and adept observer. The lively, elegant prose and critical detail of his account, based loosely on his father's journal, make it one of the finest works of eighteenth-century travel literature and an account of prime importance in the history of European contact with Pacific peoples. The Forsters' publications

reveal the sophistication and enthusiasm they brought to their observation of Polynesian peoples as well as a sensitivity to the moral ambiguities of contact. The two volumes of George Forster's work include substantially richer descriptions of encounters with island inhabitants than either his father's classic work (*Observations Made during a Voyage round the World*, UH Press, 1996) or Cook's official narrative, and its confident, even visionary, style incorporates a good deal of polemic, particularly in its criticism of the treatment of islanders by Cook's crew. In addition to the range and depth of its anthropological considerations, it provides a thrilling account of life aboard one of Cook's vessels. In its author's German translation, this work becomes a classic of natural history writing, but its original English version has long been neglected by anglophone scholars. This new scholarly edition makes this important book readily available for the first time since its initial publication more than two centuries ago. But it also presents the work in fresh terms, making it more accessible and relevant to a contemporary audience. The valuable introduction and annotations draw on the wide range of anthropological and ethnohistorical scholarship published since the 1960s and contextualize the book in relation to both the cultures of Oceania documented by the

Forsters and the history of European voyaging in the Pacific. Appendixes include a translation of the introduction to the German edition and the polemical pamphlets by George Forster and the ship's astronomer William Wales, in which some of the book's more controversial claims were debated. *A Voyage Round the World* brings the disciplines of history and anthropology to bear on Cook's voyages in an illuminating and readable fashion. This edition will help complete the corpus of basic documents on Cook's voyages--a crucial resource for researchers in cultural, Pacific, and maritime history; archaeologists, anthropologists, and art historians; and most recently for scholars engaged in revisionist interpretations of eighteenth-century exploration and colonization.

answer in steps we start with
differentiating in terms of the left
most variable in xyz so here
we start by taking the derivative
with respect to x first $f_x = 4\cos$
 $4x yz$ then $f_{xx} = 16\sin 4x yz$ f_{xxy}
 $16z\cos 4x yz$ finally f_{xxyz}
 $16\cos 4x yz$ $16yz\sin 4x yz$
