Wen Wen Tsao

Lost in Google Translate Wen Wen Tsao,2017-11-28 Thank you, who are brave enough to challenge this fiction. YOU will be the author of it because you have to use all your imagination to understand it. Try not to be misled by the words which are translated from Chinese by Google Translate, which is quite nice by the way. Try to read beyond the words. This fiction cannot be meaningful without your imagination and experiences. You will be the one that solves all the puzzles lost in translation in the fiction, and the one that makes it a unique one that is meaningful to you only. You are writing it while reading it. Words can tell you something only after you process them in your mind. You are the only one that can tell you something. This story is about a big secret of a normal man who cannot tell who he really is and who tries very hard to fit into the world. Living in two different identities seems the only one choice for him. When the story goes, it becomes a common situation for everyone nowadays. It seems very normal now in the internet world for people to have two different identities: one is for the internet, the other one behind the screen. Although secrets are supposed to be hidden deep down in the mind, we also know that what a relief it can be if the secrets can be revealed and known by someone. Using Google translate might be a good way for people to tell their secrets out loud. When the secrets are translated by you, they become yours. It is the fun part of telling secrets. We all have our own secrets, so that we can understand others'. More, the day has come for

people to re-think the function of language. When the world is getting smaller because of the internet and all kinds of communication systems, there seems to be a call for some kind of universal language in the world, and a call for us to think that communication should be made by our love and concerns for each other instead of words or languages, which become more ambiguous when there are too much information in the world and when people are getting less patient. What we need now is less talking, but more listening. Trying to understand each other beyond words may be the key for communication nowadays.

Thing Translator: An Efficient Way to Classify Different Things Vyom Makwana,Keyur Babariya,Vishakha Shelke,2021-10-05 Translation is the communication of a source-language text into an equivalent target-language text. A translator always risks in advertently introducing source-language words, grammar, or syntax into the target-language rendering. Thing Translator is an open-source offline application that uses the modern machine learning techniques - namely, computer vision and natural language translation. Thing Translator is a web app that lets you point your phone at particular object to hear it in a different language. The task of the translator here is to maintain a delicate balance between the source language and the language of translation. Thing translator is using Google's Translate API's and cloud vision as it was developed by Google as a part of AI experiment. The main reason behind building this application is to help each and every person to know different things in many

languages and understand them better. When we want to travel outside our place or outside India then there may be difficulty that we may not know that language of that particular region, we find language barrier due to not understanding the language they speak there is also a language barrier if want to shop from another region. We have designed an application Thing Translator: An Efficient Way to Classify Different Things for every person to classify or recognize different things present around them. Thing translator is an android application which uses image recognition and object character recognition. This is useful to understand and to learn names of different objects just a capturing the image and also to learn pronunciation of the objects in native or other languages.

“I don’t translate, I create!” Vanessa Drexler,2016-01-05 “I don’t translate, I create!” – This is the slogan of a translation agency called “Sternkopf Communications” located in Flöha, Germany. The translators at this translation agency are specialized in the field of marketing and perceive creativeness their daily bread. But what does this actually mean – I don’t translate, I create? Undoubtedly, the translation of a text from one language into another is not an easy and straightforward process. On the contrary, the translator needs to invest much time and one or the other headache before a target text (TT) finally sounds natural, fluent, coherent and logical for the target audience. Different possible translation solutions will have to be considered, language as well as culture-related

equivalents often are not easily at hand etc. Would it not be pleasant if machine translation (MT) was there to help with this process? Yet, despite the enormous importance of creativity in translating, computer-aided translation (CAT) tools are being used frequently by professional translators, not to replace but to support the translator in their daily business. CAT tools enable their users to translate in a more consistent way, since they search source texts for words, phrases or sentences that have already been translated before and stored in the TM so that the translator does not need to translate this text unit again 'from scratch'. Considering that this process brings about what could be called 'semi-mechanical' TTs, the use of CAT tools seems to stand in stark contrast to the importance of creativity mentioned above. Thus, the question arises whether CAT tools influence the creative energy of translators and, if this is the case, whether translators regard this influence as rather positive or negative. In this context, it is also important to consider which fields of expertise generally demand a high degree of uniformity/consistency in translations and which subject fields generally allow for a high degree of creative freedom. Accordingly, this paper pursues two related purposes. The first is to compare five CAT tools in their degree of usability. The second purpose is to identify translators' perspectives on uniformity and creativity in translations with the goal to shedding light on the question whether CAT tools generally tend to positively or negatively

influence the translation process on a rather linguistic than technological basis.
